

Attachment 5 - Response to Western States Regional Council of Carpenters, December 28, 2025

MEMORANDUM

date December 28, 2025

to Peer Chacko, City of Culver City

from Mike Harden, Environmental Science Associates (ESA)

subject Supplemental CEQA Responses, Western Carpenters, 5757 Uplander Project, Culver City, California

Background

The City of Culver City (City), as lead agency, prepared an Environmental Checklist in October 2025 pursuant to California Environmental Quality Act (CEQA) Guidelines Section 15168(c) to evaluate the potential environmental effects associated the proposed 5757 Uplander Project (Project). Section 15168(c) of the CEQA Guidelines sets forth criteria to utilize a program Environmental Impact Report (EIR) for “later activities” within the scope of a program EIR. The City certified a programmatic EIR to evaluate the potential environmental impacts of approving the Culver City General Plan 2045 and Zoning Code Update Project in September 2024. The General Plan 2045 and Zoning Code Update Program EIR (State Clearinghouse No. 2022030144) (Programmatic EIR or Certified PEIR) evaluated the anticipated development within the City of Culver City (City), including the anticipated development on the Project Site.¹ The General Plan 2045 and Zoning Code update took effect on October 9, 2024.

The City published a Notice of Planning Commission Hearing (NOA) for the Project on October 22, 2025. The notice indicated that, “[b]ased on the Culver City General Plan 2045 and Zoning Code Update Certified Programmatic Environmental Impact Report (PEIR) analysis and pursuant to California Environmental Quality Act (CEQA) Guidelines, the City prepared a written checklist to evaluate the Project-specific environmental impacts and determined they are “within the scope” of the Certified PEIR. Pursuant to CEQA Guidelines Section 15168(c)(2), no further environmental analysis is required.”

On November 12, 2025, the City’s Planning Commission approved Resolution No. 2025-P013, which adopted the Project’s CEQA Environmental Checklist and approved the requested Site Plan Review, Tentative Parcel Map, and Extended Construction Hours for the Project.

On November 12, 2025, Mitchell M Tsai, Law Firm, on behalf of the Western States Regional Council of Carpenters (“Western Carpenters” or “WSRCC”), submitted a comment letter (included as Attachment 1 to this Memo). This comment letter includes comments stating that the Project’s current environmental review has failed to comply with CEQA, and that the Project should be subject to review via its own EIR or Supplemental EIR, in lieu of a CEQA 15168 Checklist. WSRCC further requests that the City consider utilizing a local workforce and implementing

¹ A copy of the certified programmatic Final EIR for the General Plan 2045 can be found at <https://www.culvercity.org/files/content/public/v/7/city-hall/city-departments/planning-and-development/advance-planning-division/zz.-general-plan-2045-environmental-review/final-peir.pdf>.

Covid-19 safety measures, and thoroughly analyze the Project's population, housing, transportation, and traffic impacts.

Below are responses to address the comments in the WSRC letter.

Supplemental Responses

Comment WSRCC-1

Dear Chair Menthe, Honorable Commissioners, Emily Stadnicki, and Peer Chacko,

On behalf of the Western States Regional Council of Carpenters ("Western Carpenters" or "WSRCC"), our Firm is submitting these comments in connection with the City of Culver City's ("City") public hearing for the 5757 Uplander Project ("Project") and the CEQA Guidelines section 15168(c) Clearance Checklist ("CEQA 15168 Checklist") prepared in connection therewith scheduled to be considered at the City's November 12, 2025, Planning Commission meeting (Agenda Item No. PH-4).

The Project's CEQA 15168 Checklist describes the Project as follows, in pertinent part:

The Project proposes to develop a mixed-use residential and commercial project on an approximately 8.34-acre (363,199 square feet [sf]) site (Project Site) located on four Assessor Parcel Numbers (APN) 4134-005-021 (5800 Hannum Avenue), 4134-005-004 (6031 Uplander Way), 4134-005-003 (5821 Uplander Way) and 4134-005-002 (5835 Sumner Way, Bldg E), within the Fox Hills neighborhood of the City of Culver City (City).

The Project Site is currently developed with four existing one- to two-story business park buildings totaling approximately 146,414 sf and associated surface parking, all of which would be removed to accommodate development of the Project.

The Project would develop three new seven-story mid-rise buildings with a maximum height of 93 feet and six inches. The three buildings, referred to herein as Buildings 1, 2 and 3, would generally be situated in the northern, central and southern portions of the Project Site, respectively. Building 1 would contain 382 residential units and a ground-level, approximately 5,772 sf retail space fronting Hannum Avenue.

Buildings 2 and 3 would include 349 and 346 units, respectively, with no retail use, and would be located south of Building 1. Overall, the Project's proposed uses include 5,772 square feet of retail space and 1,077 residential units. At this density, there would be 129.14 units per acre. The Project is proposing to include 78 Very-Low Income affordable housing units to allow an additional 243 density bonus units to be developed as part of the Project, which are included within the Project's 1,077 total units.

...

The Project proposes to maintain the site's Mixed Use High General Plan land use and zoning designations. The Project is seeking a Density and Other Bonus Incentives (DOBI) approval to allow increased density with affordable units incorporated into the Project as well as a height incentive, and approval for Extended Hours of Construction per CCMC Section 9.07.035.C.1. The Project is requesting a Vesting Tentative Parcel Map to

consolidate the existing four Project Site parcels and subsequently divide the Project Site into three parcels, each of which will contain one of the three Project buildings. Finally, the Project will require Site Plan Review to construct a new residential project with more than 26 units. (CCMC Section 17.540).

CEQA 15168 Checklist, pp. 1-1 – 1-2.

Response to Comment WSRCC-1

This introductory comment introduces the commenter and provides a brief overview of the Project. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the Project decision-makers for their review and consideration.

Comment WSRCC-2

As disclosed in the City’s December 9, 2024, Notice of Preparation (“NOP”) of Environmental Impact Report (“EIR”) for the Project (Exhibit A hereto), the City had determined, based on the Project’s December 6, 2024, CEQA Initial Study (“IS”), that the Project “MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required...” to analyze the Project’s environmental effects. (See Exhibit B hereto.) To that end, the Project’s IS determined that the Project would have potential significant impacts for the following impact categories: Aesthetics, Air Quality, Cultural Resources, Energy, Geology and Soils, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Land Use and Planning, Noise, Population and Housing, Public Services, Recreation, Transportation, Tribal Cultural Resources, Utilities and Service Systems, and Mandatory Findings of Significance. (See Exhibit B, pp. EC-5 – EC-12.)

Notably, at the time of the City’s release of the NOP and IS for the Project, the City had already adopted and certified the Programmatic EIR for its General Plan 2045 and Zoning Code Update (“PEIR”) in September of 2024 (multiple months prior to the City’s determination that Project would require its own EIR). The NOP and IS for the Project made no mention of any determination by the City that the Project would be covered by the PEIR or otherwise subject to a CEQA 15168 Checklist to comply with CEQA’s environmental review requirements.

On April 11, 2025, the Applicant then resubmitted an SB 330 application for the Project, and it appears that based thereon, the City has now reversed course regarding its prior findings that an EIR was required for the Project, instead electing to pursue a determination that the Project is covered by the City’s General Plan PEIR, and that no independent environmental review for the Project is required. However, the Applicant has made only minor changes to the nature and scope of the Project between the version the City reviewed via the prior NOP and IS versus the iteration now being presented to the Planning Commission as purportedly exempt from further CEQA review. Indeed, the Project proposes the same number of buildings, the same number of total units, the same number of affordable units, the same density, the same amount of retail space, and a nearly identical site plan to the version that the City previously determined required an EIR in its December 6, 2024 IS, except the Project’s current iteration is now proposed to be taller.

WSRCC submits that the analysis and findings set forth in the December 6, 2024, IS for the Project remain applicable, such that an EIR for the Project must still be prepared. Moreover, the Staff Report for the instant Planning Commission hearing on the Project did not attach the Project’s prior NOP and IS, and fails to make any reference to them or the Project’s history whatsoever, despite the prior CEQA documents for the Project containing findings that

are still very much applicable to it. WSRCC submits that the Planning Commission should carefully consider and scrutinize the City's omissions in these regards, and explore the intentions behind them.

Response to Comment WSRCC-2

This comment states that an NOP prepared in December 2024 included an initial study ("Initial Study") that determined an EIR was required for the Project. Further, it stated the Initial Study determined the Project would have potential significant impacts across multiple categories, and notes that the City had already adopted the Programmatic EIR for its General Plan 2045 and Zoning Code Update ("PEIR") in September of 2024, months prior to the City's determination that Project would require its own EIR. The commenter states that the NOP and Initial Study for the Project do not mention any City determination that the Project would be covered by the PEIR or otherwise subject to a CEQA 15168 Checklist. The commenter states that only minor revisions were made to the scope and nature of the Project compared to the Project as described in the resubmitted SB 330 application for the Project in April 2025. The commenter states that the findings in the 2024 Initial Study for the Project remain applicable requiring an EIR for the Project to still be prepared. The commenter also states that the Staff Report for the Planning Commission hearing on the Project did not attach the Project's prior NOP and Initial Study, and fails to references them or the Project's history.

The Project applicant (Applicant) initially submitted its application for the Project on February 2, 2024. The Initial Study was prepared over the course many months in 2024, whereby it was released for public review on December 9, 2024. The Project description's list of discretionary approvals for the Project in the Initial Study included in part a General Plan Amendment related to various General Plan policies and standards in effect as of February 2, 2024, when the Project's preliminary application was submitted; a Zone Change Map Amendment from Mixed-Use High to Planned Development (PD); and adoption of a Comprehensive Plan to develop standards for the new PD zoning for the phasing and development program of the Project. The Initial Study analysis did not attempt to tier from the PEIR. However, on October 9, 2024—after the Applicant submitted its Project application and while it was preparing the Initial Study, but before the City published the Initial Study—the City adopted the General Plan 2045 and Zoning Code update.

Subsequent to the release of the Initial Study, the Applicant revised the Project and the Project description in the Initial Study to more closely align with standards and requirements the 2045 General Plan land use and zoning designations allowed for the site as assumed by and analyzed in the PEIR. As a result, the Project removed its requests for a General Plan Amendment; a Zone Change Map Amendment, and adoption of a Comprehensive Plan. With the updates to the Project, including its removal of several requested approvals, the Project's proposed land use components were consistent with the City's General Plan 2045 land use and zoning designations for the Project site, whereas the Project evaluated in the Initial Study was not. This factor alone previously disallowed a streamlined document tiering from the PEIR. When the Applicant amended its Project to comply with the City's new General Plan 2045 and Zoning Code update, it was able to tier from the PEIR.

CEQA also required the lead agency to determine whether the Project impacts were within the scope of the impacts of the PEIR. The City as lead agency provided this necessary Project-specific analysis in its Environmental Checklist, which showed that the impacts of the Project were not substantially greater or different (i.e., new impacts) than the impacts evaluated in the PEIR for the Project's proposed Mixed Use High land use designation. Moreover, the Environmental Checklist was comprehensive, containing approximately 2,628 pages, providing 13 appendices with various technical studies and data, and assessing each question listed in CEQA

Guidelines Appendix G. Much of this analysis, including modeling and calculations of impacts, is what would have been included in an EIR, should it have been required.

Projects often change their CEQA course as modifications or refinements occur, existing conditions change, regulations change, program-level analyses are further considered, etc. Here, based on the changes to the Project after the City published the Initial Study and a comprehensive evaluation of the Project's impacts relative to those evaluated in the PEIR, the lead agency determined shifting from a project-specific EIR to the approved Environmental Checklist approach to be appropriate. Furthermore, WSRCC could not cite to any CEQA requirement that requires the Project to prepare a project-specific EIR, despite an Initial Study being prepared, because none exists.

Finally, the commenter states that the Staff Report for the Planning Commission hearing on the Project did not attach the Project's prior NOP and IS, and fails to make any reference to them or the Project's history. The commenter states that the Planning Commission should carefully consider and scrutinize the City's omissions in these regards, and explore the intentions behind them. In their comments, the commenter contends that the findings in the Initial Study are still "very much applicable." However, this assertion is not correct. As discussed above, the Applicant revised the Project and the Project Description in the Initial Study to more closely align with standards and requirements the 2045 General Plan land use and zoning designations allowed for the site as assumed by and analyzed in the PEIR. The Initial Study analysis did not attempt to tier from the PEIR. Because of the changes to the Project Description when viewed together with the PEIR and subsequent change in course to the Environmental Checklist approach, the Project Description and findings in the Initial Study are no longer current or applicable in assessing the Project's impacts under CEQA. Accordingly, the prior NOP/Initial Study were appropriately not included or referenced in the current Environmental Checklist as they are no longer relevant to the CEQA analysis being sought for approval.

The commenter is referred to Responses to Comments WSRCC-8, WSRCC-10 and WSRCC-11 for responses that address the Project's Initial Study and the City's decision to prepare an Environmental Checklist that tiers from the Certified Culver City General Plan 2045 and Zoning Code Update PEIR. As discussed therein, the Environmental Checklist met all applicable CEQA requirements and no Supplemental EIR or Draft EIR is required for the Project.

Comment WSRCC-3

The Western States Regional Council of Carpenters is a labor union representing almost 90,000 union carpenters in 12 states, including California, and has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects.

Individual members of the Western Carpenters live, work, and recreate in the City and surrounding communities and would be directly affected by the Project's environmental impacts.

Response to Comment WSRCC-3

This comment provides background information about the WSRCC. This comment does not raise any issues with respect to the adequacy of the Project's Environmental Checklist. Therefore, it is noted for the record and will be forwarded to the Project decision-makers for their review and consideration.

Comment WSRCC-4

The Western Carpenters expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109,1121.

The Western Carpenters incorporates by reference all comments raising issues regarding the Project's CEQA review and/or its Environmental Impact Report (EIR) submitted prior to approval of the Project and/or the certification of its EIR. See *Citizens for Clean Energy v City of Woodland* (2014) 225 Cal.App.4th 173, 191 (finding that any party who has objected to the project's environmental documentation may assert any issue timely raised by other parties).

Moreover, the Western Carpenters requests that the City provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act (CEQA) (Pub. Res. Code, § 21000 *et seq.*), and the California Planning and Zoning Law ("Planning and Zoning Law") (Gov. Code, §§ 65000–65010). California Public Resources Code Sections 21092.2, and 21167(f) and California Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body.

Response to Comment WSRCC-4

This comment states that the WSRCC expressly reserves the right to supplement these comments at or prior to hearings on the Project. The comment incorporates by reference all the comments raising issues regarding the Project's CEQA review and/or its Environmental Impact Report (EIR) submitted prior to approval of the Project and/or the certification of its EIR. Finally, the commenter requests that the City provide notice for any and all notices referring or related to the Project issued under CEQA.

The City acknowledges the commenter's request to provide supplemental comments on the Project, incorporate comments raised during the CEQA review process, and provide noticing in compliance with CEQA requirements. This comment does not raise any issues with respect to the adequacy of the Project's Environmental Checklist. Therefore, it is noted for the record and will be forwarded to the Project decision-makers for their review and consideration.

Comment WSRCC-5

I. THE CITY SHOULD REQUIRE THE USE OF A LOCAL WORKFORCE TO BENEFIT THE COMMUNITY'S ECONOMIC DEVELOPMENT AND ENVIRONMENT

The City should require the Project to be built using a local workers who have graduated from a Joint Labor-Management Apprenticeship Program approved by the State of California, have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state-approved apprenticeship training program, or who are registered apprentices in a state-approved apprenticeship training program.

Community benefits such as local hire can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within

10 miles or less of the Project site can reduce the length of vendor trips, reduce greenhouse gas emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

[A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

[L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California’s workforce can positively affect returns on climate mitigation efforts. In other words, well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.¹

Furthermore, workforce policies have significant environmental benefits given that they improve an area’s job-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7, 2021, the South Coast Air Quality Management District found that that the “[u]se of a local state-certified apprenticeship program” can result in air pollutant reductions.²

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.³

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (VMT). As planning experts Robert Cervero and Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.⁴ Some municipalities have even tied local hire and other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city’s First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022, otherwise known as Assembly Bill No. 2011 (“**AB2011**”). AB2011

amended the Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

The City should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate greenhouse gas, improve air quality, and reduce transportation impacts.

Response to Comment WSRCC-5

This comment requests the City to require the Project to be built using a local workers who have graduated from a Joint Labor-Management Apprenticeship Program approved by the State of California. This comment does not raise any issues with respect to the adequacy of the Project’s Environmental Checklist. Therefore, it is noted for the record and will be forwarded to the Project decision-makers for their review and consideration.

Comment WSRCC-6

II. THE CITY SHOULD IMPOSE TRAINING REQUIREMENTS FOR THE PROJECT’S CONSTRUCTION ACTIVITIES TO PREVENT COMMUNITY SPREAD OF COVID-19 AND OTHER INFECTIOUS DISEASES

Construction work has been defined as a Lower to High-risk activity for COVID-19 spread by the Occupations Safety and Health Administration. Recently, several construction sites have been identified as sources of community spread of COVID-19.⁵

Western Carpenters recommend that the Lead Agency adopt additional requirements to mitigate public health risks from the Project’s construction activities. Western Carpenters requests that the Lead Agency require safe on-site construction work practices as well as training and certification for any construction workers on the Project Site.

In particular, based upon Western Carpenters' experience with safe construction site work practices, Western Carpenters recommends that the Lead Agency require that while construction activities are being conducted at the Project Site:

Construction Site Design:

- The Project Site will be limited to two controlled entry points.
- Entry points will have temperature screening technicians taking temperature readings when the entry point is open.
- The Temperature Screening Site Plan shows details regarding access to the Project Site and Project Site logistics for conducting temperature screening.
- A 48-hour advance notice will be provided to all trades prior to the first day of temperature screening.
- The perimeter fence directly adjacent to the entry points will be clearly marked indicating the appropriate 6-foot social distancing position for when you approach the screening area. Please reference the Apex temperature screening site map for additional details.
- There will be clear signage posted at the project site directing you through temperature screening.
- Provide hand washing stations throughout the construction site.

Testing Procedures:

- The temperature screening being used are non-contact devices.
- Temperature readings will not be recorded.
- Personnel will be screened upon entering the testing center and should only take 1-2 seconds per individual.
- Hard hats, head coverings, sweat, dirt, sunscreen or any other cosmetics must be removed on the forehead before temperature screening.
- Anyone who refuses to submit to a temperature screening or does not answer the health screening questions will be refused access to the Project Site.
- Screening will be performed at both entrances from 5:30 am to 7:30 am.; main gate [ZONE 1] and personnel gate [ZONE 2]
- After 7:30 am only the main gate entrance [ZONE 1] will continue to be used for temperature testing for anybody gaining entry to the project site such as returning personnel, deliveries, and visitors.
- If the digital thermometer displays a temperature reading above 100.0 degrees Fahrenheit, a second reading will be taken to verify an accurate reading.

- If the second reading confirms an elevated temperature, DHS will instruct the individual that he/she will not be allowed to enter the Project Site. DHS will also instruct the individual to promptly notify his/her supervisor and his/her human resources (HR) representative and provide them with a copy of Annex A.

Planning

- Require the development of an Infectious Disease Preparedness and Response Plan that will include basic infection prevention measures (requiring the use of personal protection equipment), policies and procedures for prompt identification and isolation of sick individuals, social distancing (prohibiting gatherings of no more than 10 people including all-hands meetings and all-hands lunches) communication and training and workplace controls that meet standards that may be promulgated by the Center for Disease Control, Occupational Safety and Health Administration, Cal/OSHA, California Department of Public Health or applicable local public health agencies.⁶

The United Brotherhood of Carpenters and Carpenters International Training Fund has developed COVID-19 Training and Certification to ensure that Carpenter union members and apprentices conduct safe work practices. The Agency should require that all construction workers undergo COVID-19 Training and Certification before being allowed to conduct construction activities at the Project Site.

Western Carpenters has also developed a rigorous Infection Control Risk Assessment (“ICRA”) training program to ensure it delivers a workforce that understands how to identify and control infection risks by implementing protocols to protect themselves and all others during renovation and construction projects in healthcare environments.⁷

ICRA protocols are intended to contain pathogens, control airflow, and protect patients during the construction, maintenance and renovation of healthcare facilities. ICRA protocols prevent cross contamination, minimizing the risk of secondary infections in patients at hospital facilities.

The City should require the Project to be built using a workforce trained in ICRA protocols.

⁵ Santa Clara County Public Health (June 12, 2020) COVID-19 CASES AT CONSTRUCTION SITES HIGHLIGHT NEED FOR CONTINUED VIGILANCE IN SECTORS THAT HAVE REOPENED, *available at* <https://www.sccgov.org/sites/covid19/Pages/press-release-06-12-2020-cases-at-construction-sites.aspx>.

Response to Comment WSRCC-6

This comment requests the City to impose training requirements for the project's construction activities to prevent community spread of covid-19 and other infectious diseases. This comment does not raise any issues with respect to the adequacy of the Project's Environmental Checklist. Therefore, it is noted for the record and will be forwarded to the Project decision-makers for their review and consideration.

Comment WSRCC-7**III. THE PROJECT WOULD BE APPROVED IN VIOLATION OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT.**

The California Environmental Quality Act ("CEQA") is a California statute designed to inform decision-makers and the public about the potential significant environmental effects of a project. 14 California Code of Regulations ("CEQA Guidelines"), § 15002, subd. (a)(1).⁸ At its core, its purpose is to "inform the public and its responsible officials of the environmental consequences of their decisions before they are made." (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.)

A. Background Concerning Environmental Impact Reports Under CEQA.

CEQA directs public agencies to avoid or reduce environmental damage, when possible, by requiring alternatives or mitigation measures. CEQA Guidelines, § 15002, subs. (a)(2)-(3); see also *Berkeley Keep Jets Over the Bay Committee v. Board of Port Comes* (2001) 91 Cal.App.4th 1344, 1354; *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553; Laurel Heights Improvement Assn., 47 Cal.3d at p. 400. To achieve this purpose, CEQA mandates preparation of an Environmental Impact Report ("EIR") for projects so that the foreseeable impacts of pursuing the project can be understood and weighed. *Communities for a Better Environment v. Richmond* (2010) 184 Cal. App. 4th 70, 80. The EIR requirement "is the heart of CEQA." CEQA Guidelines, § 15003(a).

The EIR serves to provide public agencies and the public in general with information about the effect that a proposed project is likely to have on the environment and to "identify ways that environmental damage can be avoided or significantly reduced." CEQA Guidelines, § 15002, subd. (a)(2). If the project has a significant effect on the environment, the agency may approve the project only upon finding that it has "eliminated or substantially lessened all significant effects on the environment where feasible" and that any unavoidable significant effects on the environment are "acceptable due to overriding concerns" specified in Public Resources Code section 21081. See CEQA Guidelines, § 15092, subs. (b)(2)(A)-(B).

While the courts review an EIR using an 'abuse of discretion' standard, the reviewing court is not to *uncritically* rely on every study or analysis presented by a project proponent in support of its position. *Berkeley Jets*, 91 Cal.App.4th at p. 1355 (quoting *Laurel Heights Improvement Assn.*, 47 Cal.3d at pp. 391, 409 fn. 12) (internal quotations omitted). A clearly inadequate or unsupported study is entitled to no judicial deference. *Id.* Drawing this line and determining whether the EIR complies with CEQA's information disclosure requirements presents a question of law subject to independent review by the courts. *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, 515; *Madera Oversight Coalition, Inc. v. County of Madera* (2011) 199 Cal.App.4th 48, 102, 131. As the court stated in *Berkeley Jets*, prejudicial abuse of discretion occurs if the failure to include relevant information precludes informed decision-making and informed public participation, thereby thwarting the statutory goals of the EIR process. 91 Cal.App.4th at p. 1355 (internal quotations omitted).

The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. *Communities for a Better Environment v. Richmond* (2010) 184 Cal.App.4th 70, 80 (quoting *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 449-450). The EIR's function is to ensure that government officials who decide to build or approve a project do so with a full understanding of the environmental consequences and, equally important, that the public is assured those consequences have been considered. *Id.* For the EIR to serve these goals it must present information so that the foreseeable impacts of pursuing the project can be understood and weighed, and the public must be given an adequate opportunity to comment on that presentation before the decision to go forward is made. *Id.*

A public agency must prepare an EIR whenever substantial evidence supports a "fair argument" that a proposed project "may have a significant effect on the environment." Pub. Res. Code, §§ 21100, 21151; CEQA Guidelines, §§ 15002, subds. (f)(1)-(2), 15063; *No Oil, Inc.*, 13 Cal.3d at p. 75; *Communities for a Better Environment v. California Resources Agency* (2002) 103 Cal.App.4th 98, 111-112. Essentially, should a lead agency be presented with a fair argument that a project may have a significant effect on the environment, the lead agency shall prepare an EIR even though it may also be presented with other substantial evidence that the project will not have a significant effect. CEQA Guidelines, §§ 15064, subds. (f)(1)-(2); see *No Oil Inc.*, *supra*, 13 Cal.3d at p. 75 (internal citations and quotations omitted). Substantial evidence includes "enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion, even though other conclusions might also be reached." CEQA Guidelines, § 15384(a).

The fair argument standard is a "low threshold" test for requiring the preparation of an EIR. *No Oil Inc.*, *supra*, 13 Cal.3d at p. 84; *County Sanitation Dist. No. 2 of Los Angeles County v. County of Kern* (2005) 127 Cal.App.4th 1544, 1579. It "requires the preparation of an EIR where there is substantial evidence that any aspect of the project, either individually or cumulatively, may cause a significant effect on the environment, regardless of whether the overall effect of the project is adverse or beneficial[.]" *County Sanitation*, *supra*, 127 Cal.App.4th at p. 1580 (quoting CEQA Guidelines, § 15063(b)(1)).

Evidence supporting a fair argument of a significant environmental impact triggers preparation of an EIR regardless of whether the record contains contrary evidence. *League for Protection of Oakland's Architectural and Historical Resources v. City of Oakland* (1997) 52 Cal.App.4th 896, 904-905. "Where the question is the sufficiency of the evidence to support a fair argument, deference to the agency's determination is not appropriate[.]" *County Sanitation*, 127 Cal.App.4th at 1579 (quoting *Sierra Club v. County of Sonoma* (1992) 6 Cal.App.4th 1307, 1317-1318).

Further, it is the duty of the lead agency, not the public, to conduct the proper environmental studies. "The agency should not be allowed to hide behind its own failure to gather relevant data." *Sundstrom*, 202 Cal.App.3d at p. 311. "Deficiencies in the record may actually enlarge the scope of fair argument by lending a logical plausibility to a wider range of inferences." *Id.*; see also *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359, 1382 (lack of study enlarges the scope of the fair argument which may be made based on the limited facts in the record).

Thus, refusal to complete recommended studies lowers the already low threshold to establish a fair argument. The court may not exercise its independent judgment on the omitted material by determining whether the ultimate decision of the lead agency would have been affected had the law been followed. *Environmental Protection Information Center v. Cal. Dept. of Forestry* (2008) 44 Cal.4th 459, 486 (internal citations and quotations omitted). The remedy for this deficiency would be for the trial court to issue a writ of mandate. *Id.*

Both the review for failure to follow CEQA's procedures and the fair argument test are questions of law, thus, the de novo standard of review applies. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 435. "Whether the agency's record contains substantial evidence that would support a fair argument that the project may have a significant effect on the environment is treated as a question of law. Consolidated Irrigation Dist., 204 Cal.App.4th at p. 207; Kostka and Zischke, Practice Under the Environmental Quality Act (2017, 2d ed.) at § 6.76.

In cases where it is not clear whether there is substantial evidence of significant environmental impacts, CEQA requires erring on the side of a "preference for resolving doubts in favor of environmental review." *Mejia v. City of Los Angeles* (2005) 130 Cal.App.4th 322, 332. The foremost principle under CEQA is that the Legislature intended the act to be interpreted in such manner as to afford the fullest possible protection to the environment within the reasonable scope of the statutory language. *Friends of Mammoth v. Board of Supervisors* (1972) 8 Cal.3d 247, 259; CEQA Guidelines § 15003(f).

⁸ The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 15000 et seq, are regulatory guidelines promulgated by the state Natural Resources Agency for the implementation of CEQA. (Cal. Pub. Res. Code § 21083.) The CEQA Guidelines are given "great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous." *Center for Biological Diversity v. Department of Fish & Wildlife* (2015) 62 Cal. 4th 204, 217.

Response to Comment WSRCC-7

This comment provides background information on CEQA legal standards and review. This comment does not raise any issues with respect to the adequacy of the Project's Environmental Checklist. Therefore, it is noted for the record and will be forwarded to the Project decision-makers for their review and consideration.

Comment WSRCC-8

B. The City's Reliance on the Programmatic EIR for the Its [SIC] 2024 General Plan Is Improper as the Project's Prior Initial Study Presents Substantial Evidence the Project May Have Significant Impacts Not Previously Addressed

PRC section 21094 allows a prior Programmatic EIR to be used for a later project, but only if it is consistent with the program, plan, policy, or ordinance for which an environment impact report has been prepared and certified, consistent with applicable local land use plans and zoning of the city, county, or city and county in which the later project would be located, and not subject to PRC section 21166.

CEQA Guidelines Section 15168(a) permits the use of "program EIR," such as a General Plan EIR, so that "a series of actions... can be characterized as one large project." CEQA Guidelines section 15168(c) describes when and how Program EIR can be used to apply to later activities in the program. "Later activities in the program must be examined in the light of the program EIR to determine whether an additional environmental document must be prepared." 14 CCR 15168(c). On the one hand, if a project would have effects that were not examined in the Program EIR, then a new initial study is required, leading to a new EIR or negative declaration - but the new project may nonetheless tier off the Program EIR. 14 CCR 15168(c)(1). On the other hand, an agency may make a factual finding based on substantial evidence in the record that a Project is within the scope of a Program EIR - and the new Project will not require a new EIR or tiering off the Program EIR. If tiering off a Program EIR is determined to be appropriate, then

CEQA Guidelines Section 15152 govern how the new environmental review may tier off or incorporate the earlier Program EIR to avoid duplicative analysis. A subsequent EIR is required when proposed project changes introduce new significant environmental effects or substantially increase the severity of existing ones. 14 CCR 15162(a)(1).

Here, as discussed above, there is substantial evidence that the Project will have potentially significant impacts not adequately studied in the PEIR for the City's General Plan based on the findings of the City's December 6, 2024, IS for the Project, which is not referenced or discussed in any way whatsoever in the CEQA 15168 Checklist that the City prepared. Thus, the City was required to prepare an EIR for the Project, rather than its misplaced reliance on the CEQA 15168 Checklist to evade requisite CEQA review and disclosure.

Response to Comment WSRCC-8

As discussed in Response to Comment WSRCC-2, following release of the December 2024 Initial Study, the Project applicant made several changes to the Project to make it consistent with the City's General Plan land use and zoning designations and development standards. Following these changes, the lead agency evaluated whether the impacts of the Project were within the scope of the impacts of the PEIR, and concluded that they were. As such, the Project was able to tier off the PEIR. The Project's Environmental Checklist included the necessary Project-specific analyses, which showed that the impacts of the Project were not substantially greater or different (i.e., new impacts) than the impacts evaluated in the PEIR for the Project's proposed land use.

The program-level EIR does not evaluate the project-specific impacts of individual developments that may be allowed under the General Plan 2045 and Zoning Code Update. Pursuant to CEQA Section 15152, subsequent projects that are consistent with the General Plan 2045 may "tier" from this PEIR, relying on the environmental analysis and mitigation measures it contains in order to streamline environmental review and to focus on project-specific environmental effects not considered in the Program EIR, if any. Indeed, under Section 15152, "[a]gencies are encouraged to tier the environmental analyses which they prepare for separate but related projects," an approach that can "eliminate repetitive discussions of the same issues and focus the later EIR or negative declaration on the actual issues ripe for decision at each level of environmental review."

The Project's Environmental Checklist does in fact tier from the PEIR per Section 15162. The Environmental Checklist appropriately relies on the environmental analysis and mitigation measures the PEIR contains in order to streamline environmental review, as applicable, and also provides project-specific analysis of environmental effects not specifically analyzed in the PEIR where there is a potential for site-specific impacts. This is a desirable and appropriate means to streamline a project's CEQA environmental review when it's proposed land use components are consistent with the City's General Plan land use and zoning designations for a project site and the impacts of such a project are within the scope of impacts previously evaluated, as is true here with the PEIR. The Environmental Checklist found the Project does meet the applicable CEQA criteria for preparing a streamlined environmental review document.

Comment WSRCC-9

Further, CEQA Guidelines section 15168(c)(3) requires that the "agency shall incorporate feasible mitigation measures and alternatives developed in the program EIR into later activities in the program." Here, the City has failed to require and implement all mitigation measures from the PEIR in the Project and fails to explain with substantial evidence why the excluded mitigation measures were not incorporated for the Project.

Response to Comment WSRCC-9

This comment states the City has failed to require and implement all mitigation measures from the PEIR in the Project and fails to explain with substantial evidence why the excluded mitigation measures were not incorporated for the Project. The commenter does not provide any examples of this unsupported assertion or substantial evidence that the City failed to require and implement all applicable mitigation measures from the PEIR.

Chapter 3, Comparative Analysis of Project Impacts, in the Environmental Checklist includes a summary of impacts as determined in the PEIR for each environmental checklist question (Impact Determination in the Certified PEIR). This summary is followed by a “Impact Determination for Project” analysis directly applicable to the Project. This subsection for each checklist question is a project-specific CEQA analysis directly applicable to the Project to determine whether the Project’s impacts are within the scope of the impacts evaluated in the PEIR. Where necessary, the Project-specific analysis includes Project-specific quantitative analyses where necessary based on the PEIR mitigation requirements. For example, quantitative analyses of air quality emissions, energy usage, greenhouse gas (GHG) emissions, and noise levels were completed to properly assess project-specific impacts for these issue areas. Note that these analyses include the same modeling and calculations of impacts that would have been included in an EIR, should it have been required. Other issues areas such as cultural resources, hazardous materials, hydrology and water quality, transportation, and utilities/service systems all include project-specific technical evaluations as evident by the studies attached to the Environmental Checklist as appendices. Again, these analyses include the same analysis, including modeling and calculations of impacts, that would have been included in an EIR, should it have been required. Thus, further evaluation of project-specific impacts based on the PEIR mitigation measures beyond those included in the Environmental Checklist is not necessary.

Comment WSRCC-10

The Project here is seeking to create a “loophole” that cuts against established legal principles to suggest that the CEQA review now must be based only on the changes proposed by the Project compared to the conditions studied in the PEIR, regardless of whether certain impacts were or were not adequately studied in the prior PEIR on the City’s General Plan. Stated differently, such an interpretation would yield to subversion of CEQA mandates, particularly in the context of a prior EIR to a General Plan, whereby any project applicant could seek approval of a specific smaller but still significant development project within the assorted planning areas encompassed by the General Plan by applying a less focused environmental study to it, such as the CEQA 15168 Checklist at issue, and by disposing of a separate EIR for such a project. Yet, courts “choose the construction that comports most closely with the apparent intent of the lawmakers, with a view to promoting rather than defeating the general purpose of the statute. *Ibid.*; *Torres v. Parkhouse Tire Service, Inc.* (2001) 26 Cal.4th 995, 1003, 111 Cal.Rptr.2d 564, 30 P.3d 57. Any interpretation that would lead to absurd consequences is to be avoided. (*Ibid.*)” *Allen v. Sully-Miller Contracting Co.* (2002) 28 Cal.4th 222, 227. The intent of the lawmakers is embodied in CEQA Guidelines § 15003(f), whereby CEQA must be interpreted in a way to provide the fullest possible protection of the environment.

Response to Comment WSRCC-10

This comment asserts that the Project is seeking to create a “loophole” that cuts against established legal principles to suggest that the CEQA review must be based only on the changes proposed by the Project compared to the conditions studied in the PEIR, regardless of whether certain impacts were or were not adequately studied in the prior PEIR on the City’s General Plan. This comment provides no substantial evidence that the Project’s

Environmental Checklist violated any CEQA requirements. See Responses to Comments WSRCC-2, WSRCC-8 and WSRCC-9, for responses that address the Project's Initial Study and the City's decision to prepare an Environmental Checklist that tiers from the Certified Culver City General Plan 2045 and Zoning Code Update PEIR. As discussed therein, there is no substantial evidence nor a fair argument basis in the comments that indicate the Environmental Checklist did not appropriately analyze impacts from the Project via an environmental document that tiers from the Certified PEIR

Comment WSRCC-11

Lastly, a CEQA 15168 Checklist is improper in this case in view of changes in the Project relative to the City's General Plan, and *new information* about new impacts or new feasible mitigation measures. CEQA Guidelines Section 15162 requires subsequent CEQA review – distinct and different from a checklist – if changes occur in the project, changes occur in the circumstances of the project, or new information that was not and could not have been known before is now known that suggests the Project may have more impacts or there are more feasible mitigation measures available than considered before. CEQA Guidelines Section 15162(a)(1)-(3). The CEQA Guidelines Section 15162 exceptions apply here, and an EIR for the Project should be prepared as a result.

Response to Comment WSRCC-11

This comment asserts that an EIR is required based on the Section 15162 of the CEQA, which includes circumstances that require preparation of a subsequent EIR. As discussed in Response to Comment WSRCC-2, following release of the December 2024 Initial Study, the Applicant revised the Project to align with standards and requirements that the 2045 General Plan land use and zoning designations allowed for the site as assumed by and analyzed in the PEIR. The City as lead agency provided the necessary Project-specific analysis in its Environmental Checklist, which showed that the impacts of the Project were not substantially greater or different (i.e., new impacts) than the impacts evaluated in the PEIR for the Project's proposed land use that were now consistent with the site's Mixed Use High designation development standards. Also, see Responses to Comments WSRCC-8 and WSRCC-9 for responses that address the Project's Initial Study and the City's decision to prepare an Environmental Checklist that tiers from the Certified Culver City General Plan 2045 and Zoning Code Update PEIR.

Further, there is no basis to find the criteria in CEQA Guidelines Section 15162 have been met such that a major revision to the Certified PEIR is required. The analysis in Section 3, *Comparative Analysis of Project Impacts*, of the Environmental Checklist shows the Project would not result in any new significant impacts or more severe significant impacts than those identified in the Certified PEIR given that the Project is within the scope of and is consistent with the forecasted development of the City's General Plan 2045 and Zoning Code Update. Additionally, there have been no changes to the City's General Plan 2045 or Zoning Code Update since its adoption that resulted in or will foreseeably result in new significant impacts or more severe significant impacts. Based on the handful of projects that have been approved to date under the General Plan 2045 and Zoning Code Update, the number of residential dwelling units, residential floor area, and non-residential floor area anticipated for the City have not met the previously-assessed buildout assumptions in the Certified PEIR.

Comment WSRCC-12

C. The Project Requires Preparation and Circulation of Its Own Supplemental EIR or Draft EIR.

A lead agency must undertake supplemental CEQA review when substantial changes to a project or its circumstances require that lead agency to render new approvals that in turn require major revisions to a prior CEQA document due to new unstudied environmental impacts. (Pub. Res. Code §21166(a); CEQA Guidelines, §15162(a)(1); *Concerned Citizens of Costa Mesa v. 32nd Dist. Agricultural Association* (1986) 42 Cal.3d 929; *Fund for Environmental Defense v. County of Orange* (1988) 204 Cal.App.3d 1538. Cf., *Benton v. Board of Supervisors* (1991) 226 Cal.App.3d 1467, *Eller Media Company v. Community Redevelopment Agency* (2003) 108 Cal.App.4th 25.)

New information triggers a supplemental EIR to inform an agency's new discretionary project approval if it (1) was not known and could not have been known at the time the initial EIR was certified as complete for an original project, (2) the information shows new or substantially more severe significant impacts, or demonstrates the feasibility of important mitigation measures or alternatives previously found infeasible, or discloses important new mitigation measures or alternatives, and (3) the new information is of substantial importance to the project. §21166(c); Guidelines, §15162(a)(3).

Here, the substantial evidence of the Project's potential significant impacts, which was previously developed by the City itself, via the December 6, 2024, IS, has been included with this correspondence. The law unquestionably permits members of the public to point to a lead agency's own environmental review documentation for evidence of a project's significant environmental impacts if the facts and information contained therein disclose significant impacts that were not otherwise properly studied, analyzed, and/or disclosed by that lead agency. Moreover, this letter includes and incorporates additional substantial evidence and information concerning the Project's significant impacts that the City has failed to consider, study, and analyze in connection with the CEQA 15168 Checklist.

Accordingly, there is substantial evidence that the Project, as described in its supporting documentation and the CEQA 15168 Checklist, and the comments and supporting materials provided by WSRCC herein, involves changes and additions to the PEIR for the City's General Plan that are significant, rather than minor and technical, and that raise important new issues regarding the Project's significant effects on the environment.

Response to Comment WSRCC-12

This comment asserts that an EIR is required based on the Section 15162 of the CEQA Guidelines, which includes circumstances that require preparation of a subsequent EIR. The commenter also refers to the Initial Study, which they contend provides the substantial evidence of the Project's potential significant impacts. This commenter is referred to Response to Comment WSRCC-2 for a discussion of the Project's CEQA's process, which initially started with an Initial Study, but ultimately was addressed via an Environmental Checklist pursuant to the requirements of CEQA Guidelines Section 15168(c). Also, see Responses to Comments WSRCC-8, WSRCC-10 and WSRCC-11 for responses that address the Project's Initial Study and the City's decision to prepare an Environmental Checklist that tiers from the Certified Culver City General Plan 2045 and Zoning Code Update PEIR. As discussed therein, the Environmental Checklist met all applicable CEQA requirements and no Supplemental EIR or Draft EIR is required for the Project.

Comment WSRCC-13

D. The General Plan PEIR Mitigation Measures May be Inadequate to Address the Project's Potentially Significant and Unavoidable Environmental Impacts

Further, the CEQA 15168 Checklist likely improperly relies on mitigation measures already outlined in the General Plan PEIR to ameliorate the Project's potential impacts rather than identifying additional mitigation measures that are tailored to the Project's potentially significant and unavoidable impacts. Because the Project's CEQA 15168 Checklist cursorily concludes in many instances, without further deliberation, that the Project's environmental impacts will likely be less than significant, it also does not identify or propose additional mitigation measures to address the Project's anticipated environmental impacts. In many instances, the CEQA 15168 Checklist merely concludes that adherence to the General Plan PEIR's mitigation measures, or in some cases regulatory standards, will be sufficient to keep the Project's potential impacts within the parameters contemplated by the PEIR, specifically below the threshold of significant and unavoidable. However, in this regard, the CEQA 15168 Checklist presumes and takes for granted that the mitigation measures outlined in the PEIR will be adequate enough to prevent the Project from exacerbating environmental impacts, particularly given that the PEIR found the City's General Plan to have significant and unavoidable impacts with respect to air quality, cultural resources (historical resources), noise, transportation (conflict with CEQA Guideline Section 15064.3, Subdivision (b)), and utilities and service systems (water supply). That CEQA 15168 Checklist's presumptions in this regard are seriously brought into question, considering that only minimal mitigation measures have been uniquely tailored to address potential environmental impacts specific to the Project. A subsequent EIR specific to the Project would serve an important purpose in filling this informational gap with a detailed and thorough analysis of additional feasible mitigation measures beyond those described in the General Plan PEIR that could help address and ameliorate the Project's potential impacts. It is imperative under the policy goals of CEQA that the project evaluate and consider any additional feasible mitigation measures that could help mitigate the Project's environmental impacts before the Project is approved.

Therefore, based on the aforementioned reasons that demonstrate new information and circumstances concerning the Project, a new supplemental or subsequent Environmental Impact Report (EIR) is required for the Project under CEQA Guidelines Section 15162.

Response to Comment WSRCC-13

This comment states that the Environmental Checklist likely improperly relies on mitigation measures already outlined in the General Plan PEIR to address the Project's potential impacts rather than identifying additional mitigation measures that are tailored to the Project's potentially significant and unavoidable impacts. This comment is simply incorrect. Chapter 3, Comparative Analysis of Project Impacts, in the Environmental Checklist includes a summary of impacts determined in the PEIR for questions listed in CEQA Guidelines Appendix G (Impact Determination in the Certified PEIR). This summary is followed by a "Impact Determination for Project" analysis directly applicable to the Project. This subsection for each checklist question is a Project-specific CEQA analysis directly applicable to the Project to determine whether the Project's impacts are within the scope of the impacts evaluated in the PEIR.

Further, the Project-specific analysis includes Project-specific quantitative analyses where necessary based on the PEIR mitigation requirements. For example, quantitative analyses of air quality emissions, energy usage, greenhouse gas (GHG) emissions, and noise levels were completed to properly assess project-specific impacts for these issue areas. Note that these analyses include the same modeling and calculations of impacts that would have been included in an EIR, should it have been required. Other issue areas such as cultural resources, hazardous materials, hydrology and water quality, transportation, and utilities/service systems all include project-specific technical evaluations as evident by the studies attached to the Environmental Checklist as appendices. Again, these analyses include the same analysis, including modeling and calculations of impacts, that would have been included

in an EIR, should it have been required. Where, necessary, Project-specific mitigation are provided (i.e., air quality, paleontological resources, noise). Thus, further evaluation of Project-specific impacts beyond those included in the Environmental Checklist is not necessary.

Based on the above, there is no new information or circumstances concerning the Project that would require a Supplemental or Subsequent EIR under CEQA Guidelines Section 15162.

Comment WSRCC-14

WSRCC submits that the Project's current environmental review has failed to comply with CEQA, and that the Project should be subject to review via its own EIR or Supplemental EIR, in lieu of a CEQA 15168 Checklist. WSRCC further requests that the City consider utilizing a local workforce and implementing Covid-19 safety measures, and thoroughly analyze the Project's population, housing, transportation, and traffic impacts. If the City should have any questions or concerns regarding the foregoing, feel free to contact this office.

Response to Comment WSRCC-14

This conclusionary comment states that the Project's current environmental review has failed to comply with CEQA, and that the Project should be subject to review via its own EIR or Supplemental EIR, in lieu of a CEQA 15168 Checklist. As discussed in the responses above, none of the issues raised in this comment letter provide substantial evidence that the Environmental Checklist is inadequate for meeting its CEQA requirements. Therefore, an EIR to address concerns raised in this comment letter is not necessary.

In addition, the commenter further requests that the City consider utilizing a local workforce and implementing Covid-19 safety measures, and thoroughly analyze the Project's population, housing, transportation, and traffic impacts. This comment does not raise any issues with respect to the adequacy of the Project's Environmental Checklist. Therefore, it is noted for the record and will be forwarded to the Project decision-makers for their review and consideration.

RE: City of Culver City’s November 12, 2025, Planning Commission Meeting – Agenda Item No. PH-4 – 5757 Uplander Project (SCH# 2024120376).

Dear Chair Menthe, Honorable Commissioners, Emily Stadnicki, and Peer Chacko, On behalf of the Western States Regional Council of Carpenters (“**Western Carpenters**” or “**WSRCC**”), our Firm is submitting these comments in connection with the City of Culver City’s (“**City**”) public hearing for the 5757 Uplander Project (“**Project**”) and the CEQA Guidelines section 15168(c) Clearance Checklist (“**CEQA 15168 Checklist**”) prepared in connection therewith scheduled to be considered at the City’s November 12, 2025, Planning Commission meeting (Agenda Item No. PH-4).

The Project’s CEQA 15168 Checklist describes the Project as follows, in pertinent part:

The Project proposes to develop a mixed-use residential and commercial project on an approximately 8.34-acre (363,199 square feet [sf]) site (Project Site) located on four Assessor Parcel Numbers (APN) 4134- 005-021 (5800 Hannum Avenue), 4134-005-004 (6031 Uplander Way), 4134-005-003 (5821 Uplander Way) and 4134-005-002 (5835 Sumner Way, Bldg E), within the Fox Hills neighborhood of the City of Culver City (City).

The Project Site is currently developed with four existing one- to two-story business park buildings totaling approximately 146,414 sf and associated surface parking, all of which would be removed to accommodate development of the Project.

The Project would develop three new seven-story mid-rise buildings with a maximum height of 93 feet and six inches. The three buildings, referred to herein as Buildings 1, 2 and 3, would generally be situated in the northern, central and southern portions of the Project Site, respectively. Building 1 would contain 382 residential units and a ground-level, approximately 5,772 sf retail space fronting Hannum Avenue.

Buildings 2 and 3 would include 349 and 346 units, respectively, with no retail use, and would be located south of Building 1. Overall, the Project's proposed uses include 5,772 square feet of retail space and 1,077 residential units. At this density, there would be 129.14 units per acre. The Project is proposing to include 78 Very-Low Income affordable housing units to allow an additional 243 density bonus units to be developed as part of the Project, which are included within the Project's 1,077 total units.

...

The Project proposes to maintain the site's Mixed Use High General Plan land use and zoning designations. The Project is seeking a Density and Other Bonus Incentives (DOBI) approval to allow increased density with affordable units incorporated into the Project as well as a height incentive, and approval for Extended Hours of Construction per CCMC Section 9.07.035.C.1. The Project is requesting a Vesting Tentative Parcel Map to consolidate the existing four Project Site parcels and subsequently divide the Project Site into three parcels, each of which will contain one of the three Project buildings. Finally, the Project will require Site Plan Review to construct a new residential project with more than 26 units. (CCMC Section 17.540).

CEQA 15168 Checklist, pp. 1-1 – 1-2.

As disclosed in the City's December 9, 2024, Notice of Preparation (“**NOP**”) of Environmental Impact Report (“**EIR**”) for the Project (Exhibit A hereto), the City

had determined, based on the Project’s December 6, 2024, CEQA Initial Study (“**IS**”), that the Project “MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required...” to analyze the Project’s environmental effects. (See Exhibit B hereto.) To that end, the Project’s IS determined that the Project would have potential significant impacts for the following impact categories: Aesthetics, Air Quality, Cultural Resources, Energy, Geology and Soils, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Land Use and Planning, Noise, Population and Housing, Public Services, Recreation, Transportation, Tribal Cultural Resources, Utilities and Service Systems, and Mandatory Findings of Significance. (See Exhibit B, pp. EC-5 – EC-12.)

Notably, at the time of the City’s release of the NOP and IS for the Project, the City had already adopted and certified the Programmatic EIR for its General Plan 2045 and Zoning Code Update (“**PEIR**”) in September of 2024 (multiple months prior to the City’s determination that Project would require its own EIR). The NOP and IS for the Project made no mention of any determination by the City that the Project would be covered by the PEIR or otherwise subject to a CEQA 15168 Checklist to comply with CEQA’s environmental review requirements.

On April 11, 2025, the Applicant then resubmitted an SB 330 application for the Project, and it appears that based thereon, the City has now reversed course regarding its prior findings that an EIR was required for the Project, instead electing to pursue a determination that the Project is covered by the City’s General Plan PEIR, and that no independent environmental review for the Project is required. However, the Applicant has made only minor changes to the nature and scope of the Project between the version the City reviewed via the prior NOP and IS versus the iteration now being presented to the Planning Commission as purportedly exempt from further CEQA review. Indeed, the Project proposes the same number of buildings, the same number of total units, the same number of affordable units, the same density, the same amount of retail space, and a nearly identical site plan to the version that the City previously determined required an EIR in its December 6, 2024 IS, except the Project’s current iteration is now proposed to be taller.

WSRCC submits that the analysis and findings set forth in the December 6, 2024, IS for the Project remain applicable, such that an EIR for the Project must still be prepared. Moreover, the Staff Report for the instant Planning Commission hearing on the Project did not attach the Project’s prior NOP and IS, and fails to make any

reference to them or the Project’s history whatsoever, despite the prior CEQA documents for the Project containing findings that are still very much applicable to it. WSRCC submits that the Planning Commission should carefully consider and scrutinize the City’s omissions in these regards, and explore the intentions behind them.

The Western States Regional Council of Carpenters is a labor union representing almost 90,000 union carpenters in 12 states, including California, and has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects.

Individual members of the Western Carpenters live, work, and recreate in the City and surrounding communities and would be directly affected by the Project’s environmental impacts.

The Western Carpenters expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121.

The Western Carpenters incorporates by reference all comments raising issues regarding the Project’s CEQA review and/or its Environmental Impact Report (EIR) submitted prior to approval of the Project and/or the certification of its EIR. See *Citizens for Clean Energy v City of Woodland* (2014) 225 Cal.App.4th 173, 191 (finding that any party who has objected to the project’s environmental documentation may assert any issue timely raised by other parties).

Moreover, the Western Carpenters requests that the City provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act (**CEQA**) (Pub. Res. Code, § 21000 *et seq.*), and the California Planning and Zoning Law (“**Planning and Zoning Law**”) (Gov. Code, §§ 65000–65010). California Public Resources Code Sections 21092.2, and 21167(f) and California Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency’s governing body.

I. THE CITY SHOULD REQUIRE THE USE OF A LOCAL WORKFORCE TO BENEFIT THE COMMUNITY'S ECONOMIC DEVELOPMENT AND ENVIRONMENT

The City should require the Project to be built using a local workers who have graduated from a Joint Labor-Management Apprenticeship Program approved by the State of California, have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state-approved apprenticeship training program, or who are registered apprentices in a state-approved apprenticeship training program.

Community benefits such as local hire can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project site can reduce the length of vendor trips, reduce greenhouse gas emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

[A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

[L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California's workforce can positively affect returns on climate mitigation efforts. In other words,

well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.¹

Furthermore, workforce policies have significant environmental benefits given that they improve an area’s jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7, 2021, the South Coast Air Quality Management District found that that the “[u]se of a local state-certified apprenticeship program” can result in air pollutant reductions.²

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.³

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (VMT). As planning experts Robert Cervero and Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.⁴ Some municipalities have even tied local hire and

³ California Planning Roundtable (2008) Deconstructing Jobs-Housing Balance at p. 6, *available at* <https://cprroundtable.org/static/media/uploads/publications/cpr-jobs-housing.pdf>

⁴ Cervero, Robert and Duncan, Michael (2006) Which Reduces Vehicle Travel More: Jobs-Housing Balance or Retail-Housing Mixing? *Journal of the American Planning Association* 72 (4), 475-490, 482, *available at* <http://reconnectingamerica.org/assets/Uploads/UTCT-825.pdf>.

other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city’s First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022, otherwise known as Assembly Bill No. 2011 (“**AB2011**”). AB2011 amended the Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

The City should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate greenhouse gas, improve air quality, and reduce transportation impacts.

II. THE CITY SHOULD IMPOSE TRAINING REQUIREMENTS FOR THE PROJECT’S CONSTRUCTION ACTIVITIES TO PREVENT COMMUNITY SPREAD OF COVID-19 AND OTHER INFECTIOUS DISEASES

Construction work has been defined as a Lower to High-risk activity for COVID-19 spread by the Occupational Safety and Health Administration. Recently, several construction sites have been identified as sources of community spread of COVID-19.⁵

⁵ Santa Clara County Public Health (June 12, 2020) COVID-19 CASES AT CONSTRUCTION SITES HIGHLIGHT NEED FOR CONTINUED VIGILANCE IN SECTORS THAT HAVE REOPENED, available at <https://www.sccgov.org/sites/covid19/Pages/press-release-06-12-2020-cases-at-construction-sites.aspx>.

Western Carpenters recommend that the Lead Agency adopt additional requirements to mitigate public health risks from the Project’s construction activities. Western Carpenters requests that the Lead Agency require safe on-site construction work practices as well as training and certification for any construction workers on the Project Site.

In particular, based upon Western Carpenters’ experience with safe construction site work practices, Western Carpenters recommends that the Lead Agency require that while construction activities are being conducted at the Project Site:

Construction Site Design:

- The Project Site will be limited to two controlled entry points.
- Entry points will have temperature screening technicians taking temperature readings when the entry point is open.
- The Temperature Screening Site Plan shows details regarding access to the Project Site and Project Site logistics for conducting temperature screening.
- A 48-hour advance notice will be provided to all trades prior to the first day of temperature screening.
- The perimeter fence directly adjacent to the entry points will be clearly marked indicating the appropriate 6-foot social distancing position for when you approach the screening area. Please reference the Apex temperature screening site map for additional details.
- There will be clear signage posted at the project site directing you through temperature screening.
- Provide hand washing stations throughout the construction site.

Testing Procedures:

- The temperature screening being used are non-contact devices.
- Temperature readings will not be recorded.

- Personnel will be screened upon entering the testing center and should only take 1-2 seconds per individual.
- Hard hats, head coverings, sweat, dirt, sunscreen or any other cosmetics must be removed on the forehead before temperature screening.
- Anyone who refuses to submit to a temperature screening or does not answer the health screening questions will be refused access to the Project Site.
- Screening will be performed at both entrances from 5:30 am to 7:30 am.; main gate [ZONE 1] and personnel gate [ZONE 2]
- After 7:30 am only the main gate entrance [ZONE 1] will continue to be used for temperature testing for anybody gaining entry to the project site such as returning personnel, deliveries, and visitors.
- If the digital thermometer displays a temperature reading above 100.0 degrees Fahrenheit, a second reading will be taken to verify an accurate reading.
- If the second reading confirms an elevated temperature, DHS will instruct the individual that he/she will not be allowed to enter the Project Site. DHS will also instruct the individual to promptly notify his/her supervisor and his/her human resources (HR) representative and provide them with a copy of Annex A.

Planning

- Require the development of an Infectious Disease Preparedness and Response Plan that will include basic infection prevention measures (requiring the use of personal protection equipment), policies and procedures for prompt identification and isolation of sick individuals, social distancing (prohibiting gatherings of no more than 10 people including all-hands meetings and all-hands lunches)

communication and training and workplace controls that meet standards that may be promulgated by the Center for Disease Control, Occupational Safety and Health Administration, Cal/OSHA, California Department of Public Health or applicable local public health agencies.⁶

The United Brotherhood of Carpenters and Carpenters International Training Fund has developed COVID-19 Training and Certification to ensure that Carpenter union members and apprentices conduct safe work practices. The Agency should require that all construction workers undergo COVID-19 Training and Certification before being allowed to conduct construction activities at the Project Site.

Western Carpenters has also developed a rigorous Infection Control Risk Assessment (“**ICRA**”) training program to ensure it delivers a workforce that understands how to identify and control infection risks by implementing protocols to protect themselves and all others during renovation and construction projects in healthcare environments.⁷

ICRA protocols are intended to contain pathogens, control airflow, and protect patients during the construction, maintenance and renovation of healthcare facilities. ICRA protocols prevent cross contamination, minimizing the risk of secondary infections in patients at hospital facilities.

The City should require the Project to be built using a workforce trained in ICRA protocols.

III. THE PROJECT WOULD BE APPROVED IN VIOLATION OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT.

The California Environmental Quality Act (“**CEQA**”) is a California statute designed to inform decision-makers and the public about the potential significant environmental effects of a project. 14 California Code of Regulations (“**CEQA**

⁶ See also The Center for Construction Research and Training, North America’s Building Trades Unions (April 27 2020) NABTU and CPWR COVID-19 Standards for U.S. Construction Sites, available at https://www.cpwr.com/sites/default/files/NABTU_CPWR_Standards_COVID-19.pdf; Los Angeles County Department of Public Works (2020) Guidelines for Construction Sites During COVID-19 Pandemic, available at https://dpw.lacounty.gov/building-and-safety/docs/pw_guidelines-construction-sites.pdf.

⁷ For details concerning Western Carpenters’ ICRA training program, see <https://www.swmsctf.org/courses/icra-best-practices-in-health-care-construction/>

Guidelines”), § 15002, subd. (a)(1).⁸ At its core, its purpose is to “inform the public and its responsible officials of the environmental consequences of their decisions before they are made.” (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.)

A. Background Concerning Environmental Impact Reports Under CEQA.

CEQA directs public agencies to avoid or reduce environmental damage, when possible, by requiring alternatives or mitigation measures. CEQA Guidelines, § 15002, subds. (a)(2)-(3); see also *Berkeley Keep Jets Over the Bay Committee v. Board of Port Comes* (2001) 91 Cal.App.4th 1344, 1354; *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553; *Laurel Heights Improvement Assn.*, 47 Cal.3d at p. 400. To achieve this purpose, CEQA mandates preparation of an Environmental Impact Report (“**EIR**”) for projects so that the foreseeable impacts of pursuing the project can be understood and weighed. *Communities for a Better Environment v. Richmond* (2010) 184 Cal. App. 4th 70, 80. The EIR requirement “is the heart of CEQA.” CEQA Guidelines, § 15003(a).

The EIR serves to provide public agencies and the public in general with information about the effect that a proposed project is likely to have on the environment and to “identify ways that environmental damage can be avoided or significantly reduced.” CEQA Guidelines, § 15002, subd. (a)(2). If the project has a significant effect on the environment, the agency may approve the project only upon finding that it has “eliminated or substantially lessened all significant effects on the environment where feasible” and that any unavoidable significant effects on the environment are “acceptable due to overriding concerns” specified in Public Resources Code section 21081. See CEQA Guidelines, § 15092, subds. (b)(2)(A)-(B).

While the courts review an EIR using an ‘abuse of discretion’ standard, the reviewing court is not to *uncritically* rely on every study or analysis presented by a project proponent in support of its position. *Berkeley Jets*, 91 Cal.App.4th at p. 1355 (quoting

⁸ The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 15000 *et seq.*, are regulatory guidelines promulgated by the state Natural Resources Agency for the implementation of CEQA. (Cal. Pub. Res. Code § 21083.) The CEQA Guidelines are given “great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous.” *Center for Biological Diversity v. Department of Fish & Wildlife* (2015) 62 Cal. 4th 204, 217.

Laurel Heights Improvement Assn., 47 Cal.3d at pp. 391, 409 fn. 12) (internal quotations omitted). A clearly inadequate or unsupported study is entitled to no judicial deference. *Id.* Drawing this line and determining whether the EIR complies with CEQA’s information disclosure requirements presents a question of law subject to independent review by the courts. *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, 515; *Madera Oversight Coalition, Inc. v. County of Madera* (2011) 199 Cal.App.4th 48, 102, 131. As the court stated in *Berkeley Jets*, prejudicial abuse of discretion occurs if the failure to include relevant information precludes informed decision-making and informed public participation, thereby thwarting the statutory goals of the EIR process. 91 Cal.App.4th at p. 1355 (internal quotations omitted).

The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. *Communities for a Better Environment v. Richmond* (2010) 184 Cal.App.4th 70, 80 (quoting *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 449-450). The EIR’s function is to ensure that government officials who decide to build or approve a project do so with a full understanding of the environmental consequences and, equally important, that the public is assured those consequences have been considered. *Id.* For the EIR to serve these goals it must present information so that the foreseeable impacts of pursuing the project can be understood and weighed, and the public must be given an adequate opportunity to comment on that presentation before the decision to go forward is made. *Id.*

A public agency must prepare an EIR whenever substantial evidence supports a “fair argument” that a proposed project “may have a significant effect on the environment.” Pub. Res. Code, §§ 21100, 21151; CEQA Guidelines, §§ 15002, subds. (f)(1)-(2), 15063; *No Oil, Inc.*, 13 Cal.3d at p. 75; *Communities for a Better Environment v. California Resources Agency* (2002) 103 Cal.App.4th 98, 111-112. Essentially, should a lead agency be presented with a fair argument that a project may have a significant effect on the environment, the lead agency shall prepare an EIR even though it may also be presented with other substantial evidence that the project will not have a significant effect. CEQA Guidelines, §§ 15064, subds. (f)(1)-(2); see *No Oil Inc., supra*, 13 Cal.3d at p. 75 (internal citations and quotations omitted). Substantial evidence includes “enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion, even though other conclusions might also be reached.” CEQA Guidelines, § 15384(a).

The fair argument standard is a “low threshold” test for requiring the preparation of an EIR. *No Oil Inc., supra*, 13 Cal.3d at p. 84; *County Sanitation Dist. No. 2 of Los Angeles County v. County of Kern* (2005) 127 Cal.App.4th 1544, 1579. It “requires the preparation of an EIR where there is substantial evidence that any aspect of the project, either individually or cumulatively, may cause a significant effect on the environment, regardless of whether the overall effect of the project is adverse or beneficial[.]” *County Sanitation, supra*, 127 Cal.App.4th at p. 1580 (quoting CEQA Guidelines, § 15063(b)(1)).

Evidence supporting a fair argument of a significant environmental impact triggers preparation of an EIR regardless of whether the record contains contrary evidence. *League for Protection of Oakland’s Architectural and Historical Resources v. City of Oakland* (1997) 52 Cal.App.4th 896, 904-905. “Where the question is the sufficiency of the evidence to support a fair argument, deference to the agency’s determination is not appropriate[.]” *County Sanitation*, 127 Cal.App.4th at 1579 (quoting *Sierra Club v. County of Sonoma* (1992) 6 Cal.App.4th 1307, 1317-1318).

Further, it is the duty of the lead agency, not the public, to conduct the proper environmental studies. “The agency should not be allowed to hide behind its own failure to gather relevant data.” *Sundstrom*, 202 Cal.App.3d at p. 311. “Deficiencies in the record may actually enlarge the scope of fair argument by lending a logical plausibility to a wider range of inferences.” *Id.*; see also *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359, 1382 (lack of study enlarges the scope of the fair argument which may be made based on the limited facts in the record).

Thus, refusal to complete recommended studies lowers the already low threshold to establish a fair argument. The court may not exercise its independent judgment on the omitted material by determining whether the ultimate decision of the lead agency would have been affected had the law been followed. *Environmental Protection Information Center v. Cal. Dept. of Forestry* (2008) 44 Cal.4th 459, 486 (internal citations and quotations omitted). The remedy for this deficiency would be for the trial court to issue a writ of mandate. *Id.*

Both the review for failure to follow CEQA’s procedures and the fair argument test are questions of law, thus, the de novo standard of review applies. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 435. “Whether the agency’s record contains substantial evidence that would support a fair argument that the project may have a significant effect on the environment is treated

as a question of law. *Consolidated Irrigation Dist.*, 204 Cal.App.4th at p. 207; Kostka and Zischke, *Practice Under the Environmental Quality Act* (2017, 2d ed.) at § 6.76.

In cases where it is not clear whether there is substantial evidence of significant environmental impacts, CEQA requires erring on the side of a “preference for resolving doubts in favor of environmental review.” *Mejia v. City of Los Angeles* (2005) 130 Cal.App.4th 322, 332. The foremost principle under CEQA is that the Legislature intended the act to be interpreted in such manner as to afford the fullest possible protection to the environment within the reasonable scope of the statutory language. *Friends of Mammoth v. Board of Supervisors* (1972) 8 Cal.3d 247, 259; CEQA Guidelines § 15003(f).

B. The City’s Reliance on the Programmatic EIR for the Its 2024 General Plan Is Improper as the Project’s Prior Initial Study Presents Substantial Evidence the Project May Have Significant Impacts Not Previously Addressed

PRC section 21094 allows a prior Programmatic EIR to be used for a later project, but only if it is consistent with the program, plan, policy, or ordinance for which an environment impact report has been prepared and certified, consistent with applicable local land use plans and zoning of the city, county, or city and county in which the later project would be located, and not subject to PRC section 21166.

CEQA Guidelines Section 15168(a) permits the use of “program EIR,” such as a General Plan EIR, so that “a series of actions... can be characterized as one large project.” CEQA Guidelines section 15168(c) describes when and how Program EIR can be used to apply to later activities in the program. “Later activities in the program must be examined in the light of the program EIR to determine whether an additional environmental document must be prepared.” 14 CCR 15168(c). On the one hand, if a project would have effects that were not examined in the Program EIR, then a new initial study is required, leading to a new EIR or negative declaration - but the new project may nonetheless tier off the Program EIR. 14 CCR 15168(c)(1). On the other hand, an agency may make a factual finding based on substantial evidence in the record that a Project is within the scope of a Program EIR - and the new Project will not require a new EIR or tiering off the Program EIR. If tiering off a Program EIR is determined to be appropriate, then CEQA Guidelines Section 15152 govern how the new environmental review may tier off or incorporate the earlier Program EIR to avoid duplicative analysis. A subsequent EIR is required when proposed project

changes introduce new significant environmental effects or substantially increase the severity of existing ones. 14 CCR 15162(a)(1).

Here, as discussed above, there is substantial evidence that the Project will have potentially significant impacts not adequately studied in the PEIR for the City's General Plan based on the findings of the City's December 6, 2024, IS for the Project, which is not referenced or discussed in any way whatsoever in the CEQA 15168 Checklist that the City prepared. Thus, the City was required to prepare an EIR for the Project, rather than its misplaced reliance on the CEQA 15168 Checklist to evade requisite CEQA review and disclosure.

Further, CEQA Guidelines section 15168(c)(3) requires that the "agency shall incorporate feasible mitigation measures and alternatives developed in the program EIR into later activities in the program." Here, the City has failed to require and implement all mitigation measures from the PEIR in the Project and fails to explain with substantial evidence why the excluded mitigation measures were not incorporated for the Project.

The Project here is seeking to create a "loophole" that cuts against established legal principles to suggest that the CEQA review now must be based only on the changes proposed by the Project compared to the conditions studied in the PEIR, regardless of whether certain impacts were or were not adequately studied in the prior PEIR on the City's General Plan. Stated differently, such an interpretation would yield to subversion of CEQA mandates, particularly in the context of a prior EIR to a General Plan, whereby any project applicant could seek approval of a specific smaller but still significant development project within the assorted planning areas encompassed by the General Plan by applying a less focused environmental study to it, such as the CEQA 15168 Checklist at issue, and by disposing of a separate EIR for such a project. Yet, courts "choose the construction that comports most closely with the apparent intent of the lawmakers, with a view to promoting rather than defeating the general purpose of the statute. *Ibid.*; *Torres v. Parkhouse Tire Service, Inc.* (2001) 26 Cal.4th 995, 1003, 111 Cal.Rptr.2d 564, 30 P.3d 57. Any interpretation that would lead to absurd consequences is to be avoided. (*Ibid.*)" *Allen v. Sully-Miller Contracting Co.* (2002) 28 Cal.4th 222, 227. The intent of the lawmakers is embodied in CEQA Guidelines § 15003(f), whereby CEQA must be interpreted in a way to provide the fullest possible protection of the environment.

Lastly, a CEQA 15168 Checklist is improper in this case in view of changes in the Project relative to the City’s General Plan, and *new information* about new impacts or new feasible mitigation measures. CEQA Guidelines Section 15162 requires *subsequent* CEQA review – distinct and different from a checklist – if changes occur in the project, changes occur in the circumstances of the project, or new information that was not and could not have been known before is now known that suggests the Project may have more impacts or there are more feasible mitigation measures available than considered before. CEQA Guidelines Section 15162(a)(1)-(3). The CEQA Guidelines Section 15162 exceptions apply here, and an EIR for the Project should be prepared as a result.

C. The Project Requires Preparation and Circulation of Its Own Supplemental EIR or Draft EIR.

A lead agency must undertake supplemental CEQA review when substantial changes to a project or its circumstances require that lead agency to render new approvals that in turn require major revisions to a prior CEQA document due to new unstudied environmental impacts. (Pub. Res. Code §21166(a); CEQA Guidelines, §15162(a)(1); *Concerned Citizens of Costa Mesa v. 32nd Dist. Agricultural Association* (1986) 42 Cal.3d 929; *Fund for Environmental Defense v. County of Orange* (1988) 204 Cal.App.3d 1538. *Cf.*, *Benton v. Board of Supervisors* (1991) 226 Cal.App.3d 1467, *Eller Media Company v. Community Redevelopment Agency* (2003) 108 Cal.App.4th 25.)

New information triggers a supplemental EIR to inform an agency’s new discretionary project approval if it (1) was not known and could not have been known at the time the initial EIR was certified as complete for an original project, (2) the information shows new or substantially more severe significant impacts, or demonstrates the feasibility of important mitigation measures or alternatives previously found infeasible, or discloses important new mitigation measures or alternatives, and (3) the new information is of substantial importance to the project. §21166(c); Guidelines, §15162(a)(3).

Here, the substantial evidence of the Project’s potential significant impacts, which was previously developed by the City itself, via the December 6, 2024, IS, has been included with this correspondence. The law unquestionably permits members of the public to point to a lead agency’s own environmental review documentation for evidence of a project’s significant environmental impacts if the facts and information contained therein disclose significant impacts that were not otherwise properly

studied, analyzed, and/or disclosed by that lead agency. Moreover, this letter includes and incorporates additional substantial evidence and information concerning the Project's significant impacts that the City has failed to consider, study, and analyze in connection with the CEQA 15168 Checklist.

Accordingly, there is substantial evidence that the Project, as described in its supporting documentation and the CEQA 15168 Checklist, and the comments and supporting materials provided by WSRCC herein, involves changes and additions to the PEIR for the City's General Plan that are significant, rather than minor and technical, and that raise important new issues regarding the Project's significant effects on the environment.

D. The General Plan PEIR Mitigation Measures May be Inadequate to Address the Project's Potentially Significant and Unavoidable Environmental Impacts

Further, the CEQA 15168 Checklist likely improperly relies on mitigation measures already outlined in the General Plan PEIR to ameliorate the Project's potential impacts rather than identifying additional mitigation measures that are tailored to the Project's potentially significant and unavoidable impacts. Because the Project's CEQA 15168 Checklist cursorily concludes in many instances, without further deliberation, that the Project's environmental impacts will likely be less than significant, it also does not identify or propose additional mitigation measures to address the Project's anticipated environmental impacts. In many instances, the CEQA 15168 Checklist merely concludes that adherence to the General Plan PEIR's mitigation measures, or in some cases regulatory standards, will be sufficient to keep the Project's potential impacts within the parameters contemplated by the PEIR, specifically below the threshold of significant and unavoidable. However, in this regard, the CEQA 15168 Checklist presumes and takes for granted that the mitigation measures outlined in the PEIR will be adequate enough to prevent the Project from exacerbating environmental impacts, particularly given that the PEIR found the City's General Plan to have significant and unavoidable impacts with respect to air quality, cultural resources (historical resources), noise, transportation (conflict with CEQA Guideline Section 15064.3, Subdivision (b)), and utilities and service systems (water supply). That CEQA 15168 Checklist's presumptions in this regard are seriously brought into question, considering that only minimal mitigation measures have been uniquely tailored to address potential environmental impacts specific to the Project. A

subsequent EIR specific to the Project would serve an important purpose in filling this informational gap with a detailed and thorough analysis of additional feasible mitigation measures beyond those described in the General Plan PEIR that could help address and ameliorate the Project’s potential impacts. It is imperative under the policy goals of CEQA that the project evaluate and consider any additional feasible mitigation measures that could help mitigate the Project’s environmental impacts before the Project is approved.

Therefore, based on the aforementioned reasons that demonstrate new information and circumstances concerning the Project, a new supplemental or subsequent Environmental Impact Report (EIR) is required for the Project under CEQA Guidelines Section 15162.

IV. CONCLUSION

WSRCC submits that the Project’s current environmental review has failed to comply with CEQA, and that the Project should be subject to review via its own EIR or Supplemental EIR, in lieu of a CEQA 15168 Checklist. WSRCC further requests that the City consider utilizing a local workforce and implementing Covid-19 safety measures, and thoroughly analyze the Project’s population, housing, transportation, and traffic impacts. If the City should have any questions or concerns regarding the foregoing, feel free to contact this office.

Sincerely,

Jeremy Herwitt

NOTICE OF PREPARATION OF AN ENVIRONMENTAL IMPACT REPORT AND EIR SCOPING MEETING

5757 UPLANDER PROJECT

NOTICE IS HEREBY GIVEN to all responsible agencies and interested parties that the City of Culver City (City), as the Lead Agency, will be preparing an Environmental Impact Report (EIR) pursuant to the California Environmental Quality Act (CEQA) Guidelines Section 15082. This Notice of Preparation (NOP) has been prepared to describe the Project and identify the scope of environmental issues recommended to be addressed in the EIR, and to seek your comments on what environmental effects and alternatives the EIR should study. You are being notified of the City's intent, as Lead Agency, to prepare an EIR for this Project, as it is in an area of interest to you and/or the organization or agency you represent. The EIR will be prepared by consultants under direction of the City and submitted to the Planning Division for independent review and certification.

PROJECT TITLE: 5757 Uplander Project

PROJECT CASE NUMBER: Comprehensive Plan, Density and Other Bonus Incentives, Zoning Code Map Amendment, General Plan Map Amendment, Extended Construction Hours, Tentative Parcel Map and Final Map, Environmental Impact Report, P2024-0046-CP; -DOBI; -ZCMA; -GPMA; -EIR

APPLICANT/OWNER: B9 Sequoia Culver City Owner LP. C/o Spencer B. Kallick

PROJECT ADDRESS: 5757 Uplander Way in Culver City, California, 90230.

DUE DATE FOR PUBLIC COMMENTS ON THE NOP: 5:30 PM on Thursday, January 23, 2025

EIR SCOPING MEETING: 7 PM-8 PM on Tuesday, January 7, 2025 (Virtual)

PROJECT LOCATION: The 8.34-acre (363,199 square foot [sf]) Project Site is generally located at 5757 Uplander Way within the Fox Hills neighborhood of the City of Culver City (City). The Project Site is currently occupied by four one- to two-story business park/office buildings, totaling approximately 146,414 square feet, and associated surface parking. The Project Site is bound by Hannum Avenue to the north, Uplander Way to the east and south, and the Culver City Fire Department Station No. 3 and a two-story business park building on the east side of Bristol Parkway to the west. See attached figure.

PROJECT DESCRIPTION: The Project would develop three new seven-story mid-rise buildings with a maximum height of 88'-6". The three buildings, referred to herein as Buildings 1, 2 and 3, would generally be situated in the northern, central and southern portions of the Project Site, respectively. The Project entitlements include a Vesting Tentative Parcel Map and Final Map to consolidate the existing four Project Site parcels and subsequently divide the Project Site into three parcels. Each of the new parcels will contain one of the three Project buildings. Building 1 would contain a ground-level approximately 5,772 square foot retail space fronting Hannum Avenue and 382 residential units. Buildings 2 and 3 would include 349 and 346 units, respectively, with no retail use. Overall, the Project's proposed uses include 5,772 square feet of retail space and 1,077 residential units. At this density, there would be approximately 129.14 units per acre. The Project is proposing to include 78 Very-Low Income affordable housing units to allow an additional 243 density bonus units to be developed as part of the Project, which are included within the Project's 1,077 total units. Each of the Project's three buildings would have an east and west structural component separated by a planted, publicly-accessible central pedestrian paseo at the Project's ground/lower levels. The centrally located paseo would span across the entirety of the Project Site from north to south connecting Hannum Avenue to Uplander Way. Each of the three buildings would have their own dedicated parking areas that would be located within a combination of

subterranean (up to two levels) and podium parking levels. Overall, the Project would include a total of 1,382 vehicular parking spaces (1,362 residential and 20 commercial). Four points of vehicular access would be provided to the Project Site, including three driveways along Uplander Way (two on the east and one on the south) and one driveway connecting to Bristol Parkway. The Project would also provide a total of 305 commercial and residential bicycle spaces to comply with Culver City Municipal Code (CCMC) requirements.

ENVIRONMENTAL ISSUES TO BE ADDRESSED IN THE EIR: The Culver City Current Planning Division has determined based on an Initial Study that an EIR will be required to analyze the environmental effects of the Project. Environmental issues identified as having the potential to result in significant impacts that require further evaluation in the EIR include: Aesthetics (conflicts applicable zoning or regulations governing scenic quality), Air Quality (all but odors), Cultural Resources (archaeological resources), Energy, Geology and Soils (paleontological resources), Greenhouse Gas Emissions, Land Use and Planning (consistency with plans and policies), Noise (all but aircraft noise), Population and Housing, Public Services (fire protection and police protection, schools and parks), Recreation, Transportation, Tribal Cultural Resources, and Utilities and Service Systems (water, natural gas and electric power). The Initial Study is available for review on the Culver City Planning Division website (<https://www.culvercity.org/CEQAinfoanddocuments>), at City Hall, Current Planning Division Counter 2nd floor, and the Culver City Julian Dixon Library.

PUBLIC COMMENT PERIOD FOR NOP: The Current Planning Division welcomes and will consider all comments regarding the potential environmental impacts of the Project and issues and alternatives to be addressed in the EIR. All comments will be considered in preparation of the EIR. The comment period for the NOP begins on **Monday, December 9, 2024, and ends on Thursday, January 23, 2025.** Written comments should be received on or before **Thursday, January 23, 2025, at 5:30 PM.** Written comments should refer to the Project by name and case number (P2024-0046-CP; -DOBI; -ZCMA; -GPMA; -EIR) and be addressed to:

Peer Chacko, Senior Planner
City of Culver City Current Planning Division, 2ND floor
9770 Culver Boulevard, Culver City, CA 90232
Phone: (310) 253-5755 E-mail: peer.chacko@culvercity.org

EIR SCOPING MEETING: A virtual EIR Scoping Meeting will be held on **Tuesday, January 7, 2025.** In accordance with CEQA, the purpose of the EIR Scoping Meeting is for the City to solicit input and written comments from agencies and the public on environmental issues or alternatives they believe should be addressed in the EIR.

The meeting will be held in an online format using Zoom to share information regarding the Project and the environmental review process. You may join, view, and participate in the meeting by using the Zoom application, by your web browser, or by phone. Register for the virtual meeting by visiting: <https://bit.ly/5757UplanderScopingMeeting>. This will provide you with a confirmation and join link, as well as call-in numbers. City staff and environmental consultants will be available during the meeting. The meeting will begin with a presentation and be followed by a public comment session. The meeting will be open to the public and all stakeholders. Comments may be submitted via email in advance of the meeting at peer.chacko@culvercity.org, however there will also be opportunities for verbal comments taken at the meeting. A separate more detailed instructions page is included in this communication.

The EIR Scoping Meeting will take from 7 PM to 8 PM

Copies of the documentation can be reviewed online using the above link, or by requesting copies from the Current Planning Division Office, City Hall, Second Floor, 9770 Culver Boulevard, Culver City, CA 90232-0507 (handicapped accessible location). City Hall business hours are 7:30 AM. – 5:30 PM, Monday through Friday, except alternate Fridays. Please telephone in advance to ensure staff availability at (310) 253-5710.

December 9, 2024
Date

5757 Uplander Project
EIR Scoping Meeting

Virtual Meeting Instructions

A virtual EIR Scoping Meeting will be held on the proposed Project and the scope of environmental documentation on **Tuesday, January 7, 2025**. In accordance with CEQA, the purpose of the EIR Scoping Meeting is for the City to solicit input and written comments from agencies and the public on environmental issues or alternatives they believe should be addressed in the EIR.

The meeting will be held in an online format using Zoom to share information regarding the Project and the environmental review process. City staff and environmental consultants will be available during the meeting, which will begin with a presentation and be followed by a public comment session. The meeting will be open to the public and all stakeholders. **Comments may be submitted via email in advance of the meeting at peer.chacko@culvercity.org, however there will also be opportunities for verbal comments.**

The EIR Scoping Meeting will take place from 7 PM to 8 PM.

How to Participate

Joining, viewing, and participating in the virtual meeting can be done a few different ways. Below are instructions on joining using the Zoom application, by your web browser or by phone. Instructions about providing oral comments during the meeting, as well as how to receive tech support prior to and during the virtual meeting, are also outlined.

Register for the virtual meeting through Zoom by visiting: <https://bit.ly/5757UplanderScopingMeeting>. This will provide you with confirmation and join link as well as call-in numbers.

Joining the EIR Scoping Meeting

Zoom Application (Preferred Method)

- For the best experience we recommend downloading and installing Zoom on your computer before the meeting begins. You can download the Zoom software in advance or at the time you join the meeting for free at: <https://zoom.us/download>.

Zoom Through Web Browser

- You do NOT need to install Zoom software on your computer to participate and provide comments. When you click on the meeting link provided at registration a new browser tab or window will open (depending on your browser settings). To join the meeting, click the link near the bottom of the window that states “start from your browser”. We recommend Google Chrome, Safari or Firefox.

Join by Phone

- **Dial:** +1 (877) 853-5247
- **Webinar ID:** 825 7458 6427
- **Phone Shortcuts:**
 - *6 to mute and unmute yourself
 - *9 to raise your hand
- Note: if you are calling into the meeting, you will not be able to see the visual content presented, but you can listen and participate. Copies of the presentation will be provided on the City’s website after the meeting.

Providing Oral Comments

As you enter the Zoom meeting you will be automatically put on mute. To speak during the session, you will need to virtually raise your hand and a moderator will unmute you. Here's how to raise your hand and speak during the meeting:

1. Mouse over the bottom of the **Zoom** application and locate the **hand icon**.
2. Select the **hand icon** to virtually raise your hand or **dial *9** if you are joining by phone.
3. A moderator will call your name and unmute you to speak.

Once you have been called on your hand will be lowered and if you would like to speak again you will need to press the **hand icon or press *9** to be placed back in the queue.

Audio Check

You are encouraged to test your audio connection prior to joining the meeting. Click the “Audio Settings” on the lower left and make sure the microphone and speaker are assigned to the correct device. You also can do your audio check while you are waiting for the meeting to start.

Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling

Dear Mr. Tsai,

Soil Water Air Protection Enterprise (“SWAPE”) is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas (“GHG”) emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model (“CalEEMod”) is a “statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects.”¹ CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.²

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.³

¹ “California Emissions Estimator Model.” CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

² “California Emissions Estimator Model.” CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

³ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled (“VMT”) associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.⁴

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

$$\text{“VMT}_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i)_n$$

Where:

n = Number of land uses being modeled.”⁵

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

$$\text{“Emissions}_{\text{pollutant}} = \text{VMT} * \text{EF}_{\text{running,pollutant}}$$

Where:

$\text{Emissions}_{\text{pollutant}}$ = emissions from vehicle running for each pollutant

VMT = vehicle miles traveled

$\text{EF}_{\text{running,pollutant}}$ = emission factor for running emissions.”⁶

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.⁷ In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act (“CEQA”) requires that such changes be justified by substantial evidence.⁸ The default number of construction-related worker trips is calculated by multiplying the

⁵ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 23.

⁶ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.

⁷ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

⁸ CalEEMod User Guide, available at: <http://www.caleemod.com/>, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.⁹ Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively.”¹⁰ Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.¹¹ The operational home-to-work vehicle trip lengths are:

“[B]ased on the *location* and *urbanization* selected on the project characteristic screen. These values were *supplied by the air districts or use a default average for the state*. Each district (or county) also assigns trip lengths for urban and rural settings” (emphasis added).¹²

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).¹³

Worker Trip Length by Air Basin		
Air Basin	Rural (miles)	Urban (miles)
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8
Mojave Desert	16.8	10.8
Mountain Counties	16.8	10.8
North Central Coast	17.1	12.3
North Coast	16.8	10.8
Northeast Plateau	16.8	10.8
Sacramento Valley	16.8	10.8
Salton Sea	14.6	11
San Diego	16.8	10.8
San Francisco Bay Area	10.8	10.8
San Joaquin Valley	16.8	10.8
South Central Coast	16.8	10.8
South Coast	19.8	14.7
Average	16.47	11.17
Minimum	10.80	10.80
Maximum	19.80	14.70
Range	9.00	3.90

⁹ “CalEEMod User’s Guide.” CAPCOA, November 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

¹⁰ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.

¹¹ “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 14.

¹² “Appendix A Calculation Details for CalEEMod.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 21.

¹³ “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8- miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7- miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan (“Project”) located in the City of Claremont (“City”). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.¹⁴ In an effort to evaluate the potential for a local hire provision to reduce the Project’s construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
Without Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,623
Amortized Construction GHG Emissions (MT CO ₂ e/year)	120.77
With Local Hire Provision	
Total Construction GHG Emissions (MT CO ₂ e)	3,024
Amortized Construction GHG Emissions (MT CO ₂ e/year)	100.80
% Decrease in Construction-related GHG Emissions	17%

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project’s urbanization level and location.

¹⁴ “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-85.

Los Angeles-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Los Angeles-South Coast County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	9			Operational Year	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MW hr)	702.44	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

**Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
CEQA Review**

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.

B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist

California Certified Hydrogeologist

Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt’s responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt’s duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, *Oxygenates in Water: Critical Information and Research Needs*.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Colorado.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a tribal EPA meeting, Pechanga, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a meeting of tribal representatives, Parker, AZ.

Hagemann, M.F., 2003. Impact of Perchlorate on the Colorado River and Associated Drinking Water Supplies. Invited presentation to the Inter-Tribal Meeting, Torres Martinez Tribe.

Hagemann, M.F., 2003. The Emergence of Perchlorate as a Widespread Drinking Water Contaminant. Invited presentation to the U.S. EPA Region 9.

Hagemann, M.F., 2003. A Deductive Approach to the Assessment of Perchlorate Contamination. Invited presentation to the California Assembly Natural Resources Committee.

Hagemann, M.F., 2003. Perchlorate: A Cold War Legacy in Drinking Water. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. From Tank to Tap: A Chronology of MTBE in Groundwater. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. A Chronology of MTBE in Groundwater and an Estimate of Costs to Address Impacts to Groundwater. Presentation to the annual meeting of the Society of Environmental Journalists.

Hagemann, M.F., 2002. An Estimate of the Cost to Address MTBE Contamination in Groundwater (and Who Will Pay). Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to a meeting of the U.S. EPA and State Underground Storage Tank Program managers.

Hagemann, M.F., 2001. From Tank to Tap: A Chronology of MTBE in Groundwater. Unpublished report.

Hagemann, M.F., 2001. Estimated Cleanup Cost for MTBE in Groundwater Used as Drinking Water. Unpublished report.

Hagemann, M.F., 2001. Estimated Costs to Address MTBE Releases from Leaking Underground Storage Tanks. Unpublished report.

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

**Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
CEQA Review**

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.

B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist

California Certified Hydrogeologist

Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt’s responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt’s duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, *Oxygenates in Water: Critical Information and Research Needs*.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.
