technical memorandum

date July 16, 2025

to City of Culver City

from Mike Harden

subject Class 32 Categorical Exemption for the 100 Corporate Pointe Project

Introduction

ESA has prepared this analysis to assist the City of Culver City (City) in their assessment of the potential environmental impacts associated with the 100 Corporate Pointe Project (Project), pursuant to the California Environmental Quality Act (CEQA). The analysis below, along with supporting technical studies, concludes that the Project (described in more detail below) qualifies under CEQA for a Class 32 (Infill Development) Categorical Exemption, that it would not have a significant effect on the environment, and is exempt from review under CEQA.

Project Description

Project Location and Existing Conditions

The Project Site is an approximately 195,796 square foot (sf) (4.49 acre) property located at 100-101 Corporate Pointe Walk in the Fox Hills Neighborhood in the southern portion of Culver City (Project Site). The Project Site consists of two parcels (Assessor Parcel Numbers [APN] 4134-020-023 and 4134-020-020). The Project Site is bounded by Slauson Avenue to the north, five-story office buildings to the west, two- to three-story residential buildings to the east and south across Buckingham Parkway, and the Fox Hills Parkette to the south on the southeast corner of Buckingham Parkway and Hannum Avenue. The Project Site is located approximately 4.7 miles from the Pacific Ocean and approximately 8.9 miles from downtown Los Angeles. **Figure 1,** *Regional and Project Vicinity Locations*, illustrates the location of the Project Site from a regional and local perspective.

As shown in **Figure 2,** *Project Location - Aerial Photograph*, the Project Site is currently developed with an existing three-story 112,276 sf office building, a three-story parking garage, and related surface parking and landscaping. Under existing conditions, there are three vehicular access points to the Project Site: two driveways off Slauson Avenue to the north (one for ingress and one for egress), and one driveway at the southwest corner of the Project Site at the intersection of Buckingham Parkway and Hannum Avenue.

Planning and Zoning

The Culver City General Plan designation for the Project Site is Mixed Use Medium, which allows for a range of mixed use, residential, and commercial uses. The General Plan's land use vision aims to activate and intensify larger commercial and mixed use sites in Culver City. These areas will accommodate a significant amount of future growth, while creating vibrant, mixed use places that allow a mix of office, residential, and commercial uses.

ESA

SOURCE: ESA, 2025

100 Corporate Pointe Project

Figure 2
Project Location – Aerial Photograph

ESA

These sites include Mixed Use Medium areas.[1] The Project Site's zoning designation is Mixed Use Medium (MU-MD). The MU-MD zone permits a broad range of mixed use, residential, office, and commercial uses, including anchor tenants, entertainment, and restaurant uses that may share parking, and serve a regional market area.[2] The development standards of the MU-MD zone are consistent with the Mixed Use Medium land use designation of the General Plan.

Surrounding Uses and Development

The Project Site is generally surrounded by a mix of hospital, medical office, retail, restaurant, office, and residential uses. Surrounding land uses include the following:

- North – Two-story office uses across Slauson Avenue.
- South – Two- to three-story multi-family residential buildings and the Fox Hills Parkette across Buckingham Parkway.
- East – Two- to three-story multi-family residential buildings to the east across Buckingham Parkway.
- West – Five-story office uses adjacent to the Project Site.

Project Characteristics

The Project would demolish the existing obsolete office building and construct a new, modern mixed-use development. The Project is proposing to develop a new, five- to seven-story mixed use building, consisting of 351 residential units (including 30 low income affordable units) and approximately 6,825[3] sf of commercial space of up to 78 feet in height, which will wrap around a central parking garage. The Project would have a total floor area of 442,349 sf, equating to a floor area ratio (FAR) of 2.26:1. A summary of the Project is provided in **Table 1,** *Development Program Summary*, and **Figure 3,** *Conceptual Site Plan*, illustrates the conceptual site plan for the Project.

Residential Units and Density

The Project would provide a total of 351 residential units, consisting of 73 studio apartments, 139 one-bedroom apartments, 120 two-bedroom apartments, and 19 three-bedroom apartments. Of the Project's 351 total units, 30 of the units will be reserved exclusively for low income households.

Under the General Plan and Zoning Code, the Project Site has a maximum base density of 65 dwelling units per acre. (Page 114, General Plan; Culver City Municipal Code [CCMC] § 17.220.020, Tabe 2-8.) At 4.49 acres, the Property could thus be developed with up to 292 units. However, because the Project is providing 30 low income affordable units—i.e., 10% of base density—the Project is entitled to a 20% density bonus under State Density Bonus Law (DBL), thus increasing the total allowable density to the proposed 351 units.

[2] Culver City Municipal Code § 17.220.010 E.
[3] Includes 2,083 square feet of back of house space for purposes of the floor area ratio (FAR) calculation.

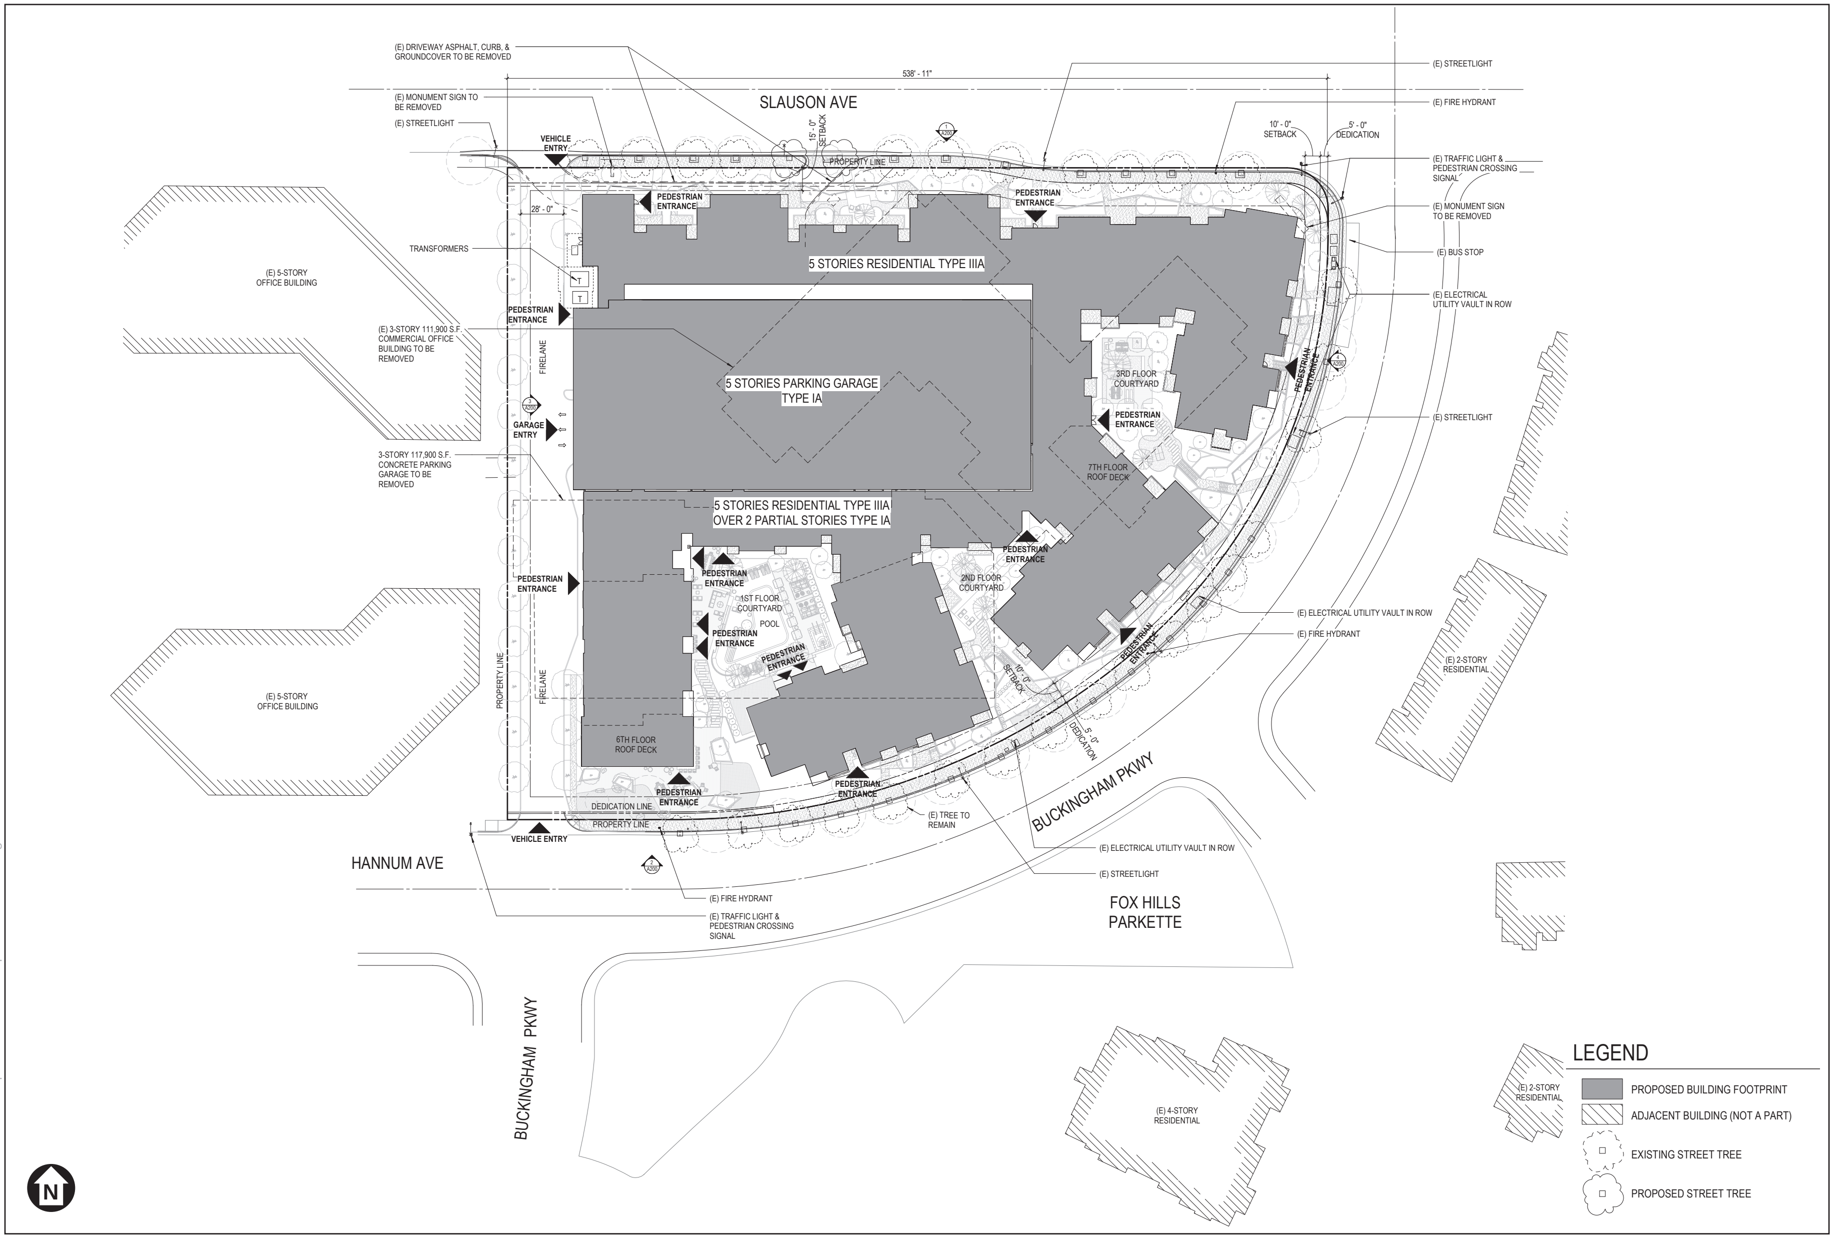
TABLE 1
DEVELOPMENT PROGRAM SUMMARY

Use	Size/Units
Site Area (sf/ac)	195,796 sf/4.49 ac
Existing	
Office Use	112,276 sf
Proposed	
Residential Component	
Studios	73 units
1-Bedrooms	139 units
2-Bedrooms	120 units
3-Bedrooms	19 units
Subtotal Residential Units and Square Footage	*351 units (435,524 sf)*
Very-Low Income Affordable Units (included in 351 units)	*30 units*
Commercial Component	
Commercial 1	4,742 sf
Commercial- Back of House 2nd Floor (for purposes of FAR calculation only)	2,083 sf
Subtotal Commercial Square Footage	6,825 *sf*
Total Residential and Commercial Square Footage	*442,349 sf*
Parking	
Residential Parking	505 spaces
Commercial Parking	19 spaces
Total Vehicle Parking Provided	*524 spaces*
Bicycle Parking Spaces (Long / Short-Term)	90 / 14 spaces
Open Space	
Common Open Space	31,756 sf
Publicly Accessible Open Space (Ground Gloor) – Included in overall common open space total	*6,169 sf*
Private Open Space (Balconies)	13,380 sf
Total Open Space Provided	***45,137 sf***

sf = square feet; ac = acres
SOURCE: KFA, 2025.

Project Layout and Design

The Project would consist of one five- to seven-story wrap-style building featuring a central parking garage that is surrounded by residential and commercial uses. Overall, the Project would be designed to work with the Project Site's constraints—namely, the sloped grade and the curved east/south edge of the site. The building would be designed to mirror the wedge shape of the Project Site by incorporating various fingers that branch out toward Buckingham Parkway and that are separated by courtyard spaces. Additionally, as discussed below, the building also steps back in height at the lower portions of the Project Site.



D202400808.00 - 100 Corporate Pointe\05 Graphics-GIS-Modeling-USE AZURE\Cat Ex

SOURCE: KFA, 2025

100 Corporate Pointe Project

Figure 3
Conceptual Site Plan

ESA

There would be a total of seven different levels of the Project (Levels 1-7); however, because of the grade change, most areas of the building consist of a maximum of five stories. The majority of the building would comply with the allowable height of 56 feet under the Zoning Code; however, the Project is requesting a 22-foot height increase as a density bonus incentive to account for the grade change along the Project Site.

Level 1 of the Project would be situated at the southwest corner of the lot, the lowest point of the Project Site. Level 1 would contain 4,742 sf retail space plus 1,184 sf of back of house retail space for a total of 6,556 sf of commercial floor area,[4] residential common space/amenities, and eight residential units. Level 1 would also feature the first of the Project's three courtyards (Courtyards 1-3), which are described in more detail below. Level 1 also includes a publicly accessible outdoor plaza in front of the retail space. **Figure 4**, *1st Floor Plan*, illustrates Level 1 of the Project.

Level 2 of the Project (which in some areas would be at ground level because of the grade change) would feature the residential lobby, the entrance to and the first level of the parking garage, 23 residential units, and Courtyard 2. **Figure 5**, *2nd Floor Plan*, illustrates Level 2 of the Project. Level 3 would be the first level where the entire footprint of the Project Site becomes available. Level 3 would feature the first full level of the parking garage, 68 residential units, and Courtyard 3. The units that would face Slauson Avenue and the northern portion of Buckingham Parkway would be ground-floor units that would have direct access to the street. **Figure 6**, *3rd Floor Plan*, illustrates Level 3 of the Project. Levels 4 and 5 would each feature a full level of parking garage and 69 residential units. Level 6 would feature a full level of parking garage, 65 residential units, and an amenity room and rooftop deck at the southwest corner of the building overlooking Buckingham Parkway and Courtyard 1. **Figure 7**, *6th Floor Plan*, illustrates Level 6 of the Project.

At Level 7, the overall footprint of the building shrinks. There is no level 7 at the southwestern part of the building, as this is the portion of the Property that has the lowest grade. This would help prevent the building from appearing too tall at the lowest portion of the Project Site. As such, Level 7 would feature the final level of the parking garage, only 49 residential units, and a rooftop deck on the eastern side of the building overlooking Courtyard 3. **Figure 8**, *7th Floor Plan*, illustrates Level 7 of the Project. The roof level of the mixed-use building would include roof-mounted mechanical equipment (e.g., air conditioning, heating, exhaust, and ventilation ducts) and solar photovoltaic (PV) panels.

The Project would use a mix of stucco and metal finishes in warm neutral colors, which are intended to help bridge the gap between the cool, austere commercial buildings to the west and the more traditional residential developments to the east and south. **Figure 9,** *North and East Elevations*, and **Figure 10,** *South and West Elevations*, illustrate the elevations of the proposed building, and **Figure 11,** *Project Renderings*, provides illustrative renderings for the Project. **Figure 12**, *Building Sections*, illustrates cross-section views of the proposed building.

---

[4] An additional 269 sf of back of house retail space would be located on Level 2. Thus, the total amount of commercial floor area space with the back of house spaces included on Levels 1 and 2 would be 6,825 sf.

Building Sections

Parking and Access

Local access to the Project Site is supported by major corridors in the City, such as Slauson Avenue, and via the I-405, which is located approximately 0.8 miles west of the Project Site. Vehicular access to the Project would be provided via a new 28-foot-wide fire lane/access lane that would run along the entire western edge of the Project Site. There would be one driveway at the north end of the access lane off Slauson Avenue and a second driveway at the south end of the access lane off Buckingham Parkway. There would also be a loading/rideshare drop off zone along the access lane near the lobby and retail space, as well as an additional loading zone near the parking garage entrance for trash pickup and deliveries. The access lane would also serve as the entrance to the Project's parking garage. The six-story parking garage would contain a total of 524 parking spaces, which consists of 505 residential spaces and 19 commercial spaces. Of the 524 parking spaces, 211 will be either electric-vehicle (EV) ready, EV-capable, or full EV parking spaces.

The Project would also support the use of alternative modes of transportation. The Project would provide 104 bicycle parking spaces, consisting of 88 long-term residential, 12 short-term residential, 2 long-term commercial, and 2 short-term commercial spaces. There are existing bicycle lanes on Buckingham Parkway in both directions.

Additionally, the Project Site is located in close proximity to a variety of public transit options. The Buckingham Parkway/Slauson Avenue bus stop, which serves bus lines 108 and CC 3, is located at the northeast corner of the Project Site. Additionally, the Culver City Transit Center is located 0.7 miles west of the Project Site.

With regard to pedestrian access, the ground-floor residential units that face Buckingham Parkway or Slauson Avenue would all have direct access to the street. Moreover, there would be additional residential entrances throughout the Project, including through the parking garage and lobby, on paths through Courtyards 1 and 2, and via an entrance off of Slauson Avenue.

Landscaping and Open Space

The Project would provide a total of 45,137 sf of open space, consisting of 31,756 sf of common area open space and 13,380 sf of private open space. Approximately 6,169 sf of the first level common open space would be publicly accessible. The common area open space would consist of residential amenities, such as gyms, clubrooms, courtyards, and rooftop decks, and the private open space consists of residential patios and balconies.

As noted above, the Project would feature three outdoor courtyards and two rooftop decks. Courtyard 1 would include a pool, spa, sun loungers, and shade cabanas. Courtyard 2 would feature lounge seating and outdoor dining tables nestled under new trees. Courtyard 3 would include dining decks surrounded by enlarged private patios. The rooftop decks would be outfitted with outdoor kitchens, dining and lounge seating areas, and outdoor games or a firepit.

The Project would also incorporate more than 39,000 sf of landscaping and approximately 139 trees. Landscaping materials—including trees, shrubs, and grasses—will be incorporated along all sides of the Property. The landscaping will consist of a diverse mix of species, with an emphasis on non-invasive and drought-tolerant species. Additionally, the Project will preserve in place all 30 of the existing street trees along Slauson Avenue and Buckingham Parkway. **Figure 13**, *Composite Landscape Plan*, provides an illustration of the Project's proposed landscaping on each level.

D202400808.00 - 100 Corporate Point\05 Graphics-GIS-Modeling-USE AZURE\Cat Ex

SOURCE: KFA, 2025

100 Corporate Pointe Project

Figure 13
Composite Landscape Plan

ESA

As discussed in the Tree Evaluation Report (see Appendix A of this document), the non-street trees to be removed as part of Project development are not able to be feasibly transplanted elsewhere. As part of the Project, top soil would remain on site, as feasible, and be used for future Project landscaping. Also, as feasible, the removed trees would be fed through a large tub-grinder, to be composted and to help the new landscape trees and shrubs as a surface mulch.

Moreover, the Project would incorporate various water conservation features, including smart irrigation controllers with rain sensors, low angle spray heads, and low volume drip tubing.

Sustainable Design Elements

Energy saving and sustainable design features would be incorporated into the Project as the proposed buildings would comply with the applicable Title 24 California Code of Regulations. The Project would include solar photovoltaic panels per CALGreen standards. Design features would include energy conservation, water conservation, TDM and mobility measures, and pedestrian- and bicycle-friendly site design. EV parking and charging would be available for residential and commercial use. As it relates to energy conservation, the Project would include LED lighting, high efficiency HVAC units, and ENERGY STAR-rated appliances. As it relates to water conservation, the Project would incorporate efficient water management through low flow faucets and water-efficient landscape design with weather-based controllers and drip irrigation systems.

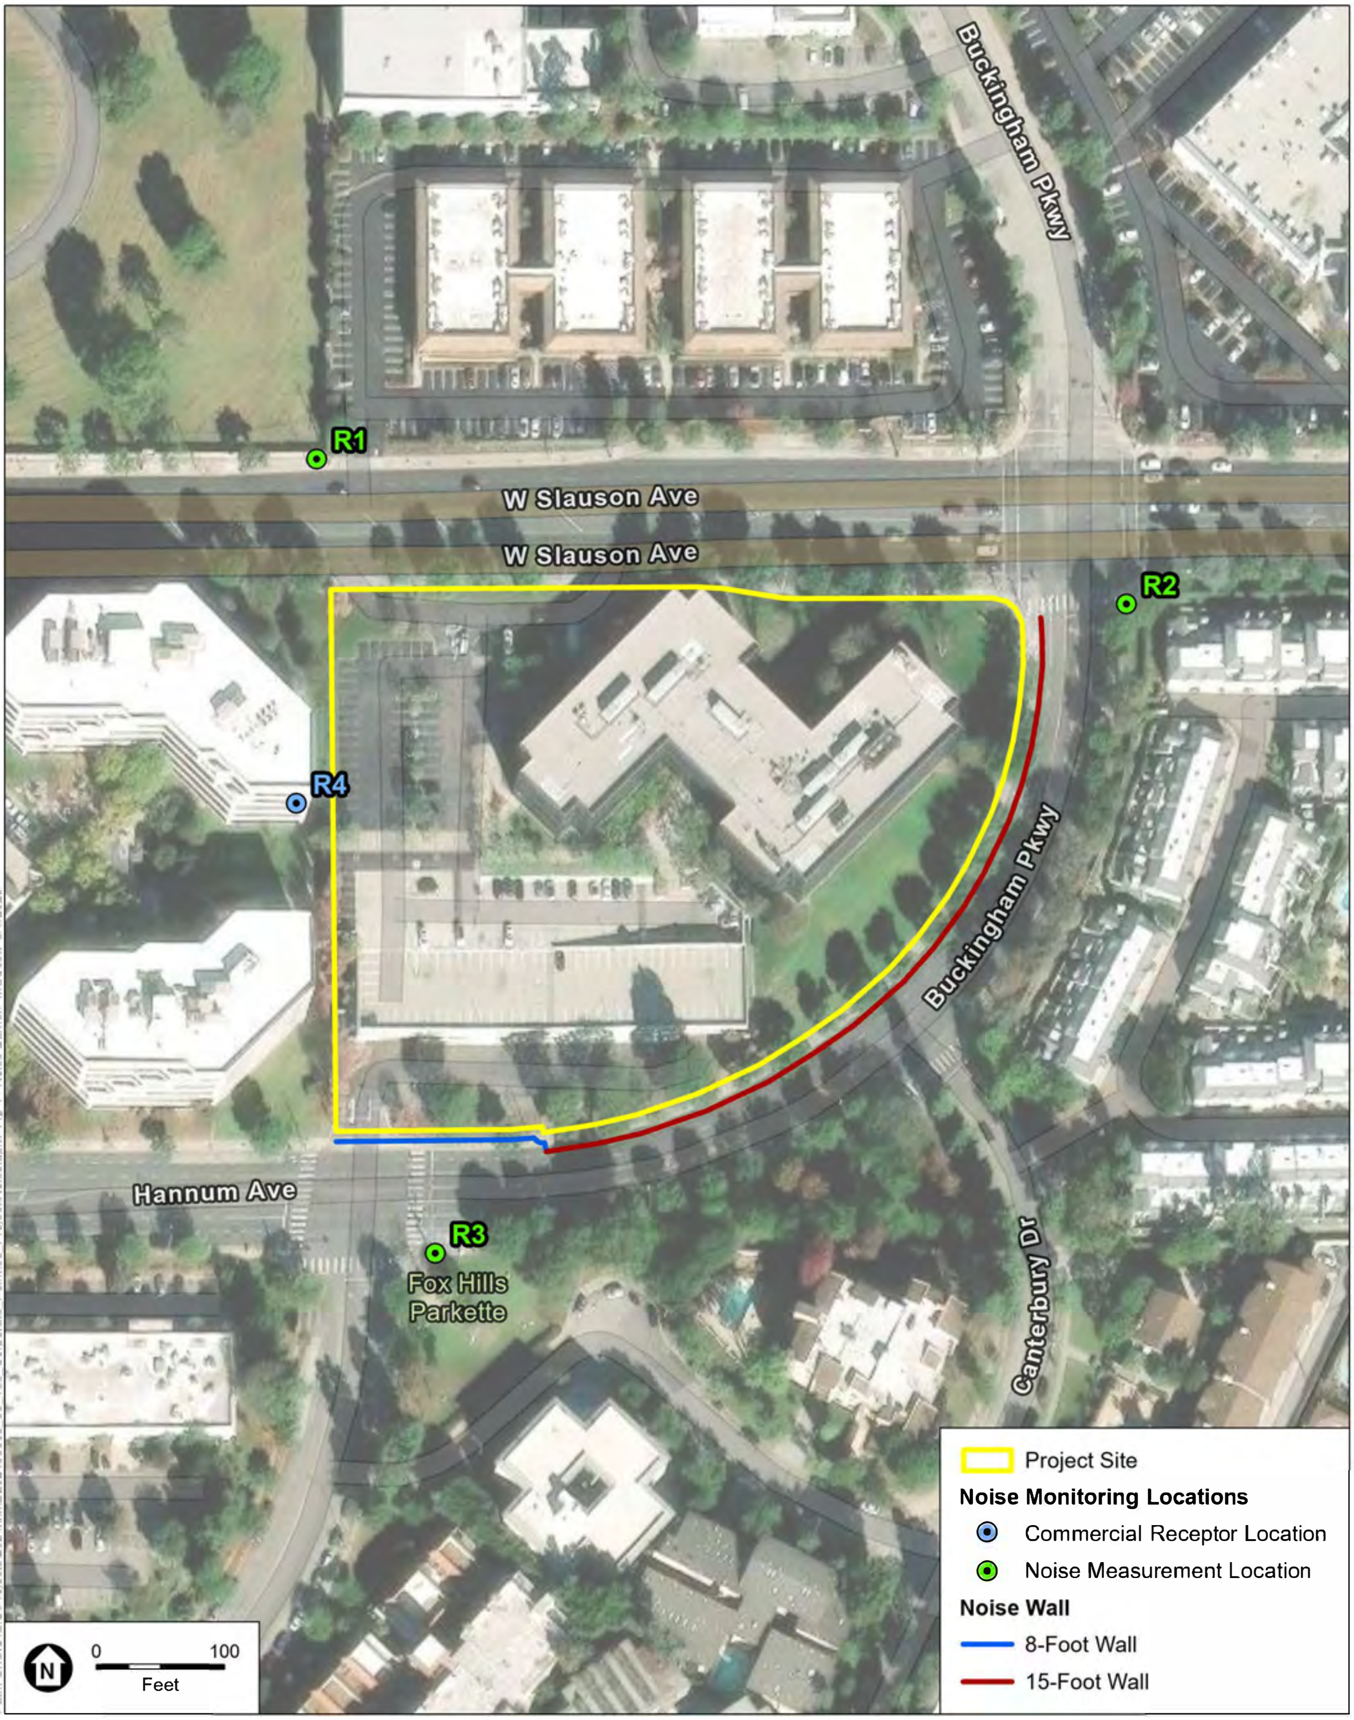
Project Design Features

The Project will include the following Project Design Features (PDFs) in order to reduce and avoid any potential environmental impacts during construction of the Project.

PDF-AIR-1: Construction Features: Construction equipment operating at the Project Site will be subject to a number of requirements. These requirements will be included in applicable bid documents, and successful contractor(s) must demonstrate the ability to supply such equipment. Construction measures would include, but are not limited to, the following:

- The Project will require all off-road diesel construction equipment greater than 25 horsepower (hp) to meet the U.S. Environmental Protection Agency Tier 4 Final off-road emission standards. A copy of each unit's certified tier specification or model year specification and California Air Resources Board or South Coast Air Quality Management District operating permit (if applicable) will be available upon request at the time of mobilization of each applicable unit of equipment.

PDF-NOI-1: Noise Barrier Implementation. Temporary noise barriers will be installed along the southern and eastern Project boundary to shield the sensitive receptors from construction noise. A barrier will be installed along the eastern and southeastern boundary of the Project Site along Buckingham Parkway and will have a minimum height of 15 feet oriented to block the line-of-sight to the nearest residences to the east and southeast along Buckingham Parkway. A barrier will also be installed along the southern boundary of the Project Site along Buckingham Parkway near the intersection with Hannum Avenue and will have a minimum height of 8 feet oriented to block the line-of-sight to the open space area to the south along Buckingham Parkway. Details on the location and heights of the noise barrier are shown in **Figure 14**, *Construction Noise Barrier Location*. These barriers will be installed during the individual demolition, site preparation, grading/ excavation (during surface grading and excavation to a depth of at least 15 feet below grade), and the overlapping phases of site preparation and grading/excavation (during surface grading and excavation to a depth of at least 15 feet below grade) and the overlapping phases of foundations/concrete and building construction. The temporary noise barriers will be made of a solid material or affixed with sound deadening blankets or curtains capable of reducing on-site construction noise levels by a minimum of 6 dBA. Stationary or mobile open access points or



SOURCE: ESA, 2025

100 Corporate Point

Figure 14
Construction Noise Barrier Location

ESA

gates are permissible to allow for adequate and safe worker, vehicle, and equipment access to the construction areas. Access points or gates will be closed or otherwise the line-of-sight to the nearest residences and open space areas referenced above will be blocked during the use of noise-generating heavy equipment within approximately 200 feet of the access points or gates

PDF-NOI-2: Construction Equipment Noise Control. Construction-related equipment will be designed to incorporate appropriate noise muffling devices and/or noise enclosures, parapets, or shielding (e.g. sound blankets) so as not to exceed the criteria for construction noise of more than 5 dBA over ambient at nearby off-site sensitive receptors.

PDF-NOI-3: Mechanical Equipment Noise. All building mechanical equipment and/or ventilation systems not fully enclosed will be designed to not exceed sound level limits or the noise level requirements of the Noise Element's regulation of Stationary Noise Sources through the use of quiet fans, duct silencers, parapets, or similar noise attenuation methods.

PDF-NOI-4: Noise Control – Amplified Sound Systems. If the Project installs permanent outdoor amplified sound systems, the systems will be located in discrete areas of the outdoor common open space areas such that the sound will be substantially blocked by the proposed on-site building or walls from off-site residential receivers. Section 9.07.055(B) of the CCMC prohibits the operation of a loudspeaker or sound amplifying equipment for the purposes of transmitting messages, giving instructions or providing entertainment that is audible at a distance of fifty (50) feet or beyond the subject's property line without first filing an application and obtaining a permit as set forth in Chapter 9.07, Noise Regulations, of the CCMC. The systems will at a minimum be designed so as not to result in a perceivable increase at the nearest noise-sensitive residential receptor. Specifically, daytime outdoor amplified sound systems will not result in an increase of 5 dBA L_{eq} over existing ambient noise conditions at the nearest noise-sensitive residential receptor. Nighttime speaker noise, if it occurs, will comply with the exterior noise standards identified in the Regulation of Stationary Noise Sources (Noise Element). A qualified noise consultant will provide written documentation to the appropriate City department showing that the design of the system(s) complies with the maximum noise levels at the property line of the nearest off-site sensitive receivers, if applicable.

PDF-TRAF-1: Construction Management Plan. A Final Construction Management Plan (FCMP) will be prepared by the Project contractor in consultation with the Project's traffic and/or civil engineer. The FCMP will define the scope and scheduling of construction activities covering the entire Project Site as well as the Applicant's proposed construction site management responsibilities in order to ensure that disturbance of nearby land uses or interruption of pedestrian, vehicle, bicycle and public transit are minimized to the extent feasible. The FCMP will be subject to review and approval by appropriate building officials, city traffic engineers, civil engineers, and planning manager for the City, as required, prior to issuance of any Project demolition, grading, or excavation permit. The FCMP will also be reviewed and approved by the respective fire and police departments.

Prior to commencement of construction, the contractor will advise the City's public works inspector and building inspector (inspectors) of the construction schedule. As-needed construction management meetings shall be convened with appropriate City staff and representatives of surrounding developments that may have overlapping construction schedules with the Project, to ensure that concurrent construction projects are managed in collaboration with one another. The FCMP will consider potential project construction disruptions to transportation facilities near the Project Site and provide effective strategies to limit the Project's use of the public right-of-way (streets and sidewalks) during peak traffic periods, and will be subject to adjustment by City staff as deemed necessary and appropriate to preserve the general public safety and welfare.

Prior to approval of the FCMP and grading permits, the Applicant will conduct one (1) community meeting pursuant to the notification requirements of the City of Culver City community meeting guidelines, to discuss and provide the following information to the surrounding community:

1. Construction schedule and hours.
2. Framework for construction phases.
3. Identify traffic diversion plan by phase and activity.
4. Potential location of construction parking and office trailers.
5. Truck hauling routes and material deliveries (i.e., identify the potential routes and restrictions. Discuss the types and number of trucks anticipated and for what construction activity).
6. Emergency access plan.
7. Demolition plan.
8. Staging plan for the concrete pours, material loading and removal.
9. Crane location(s).
10. Accessible Applicant and contractor contacts during construction activity and during off hours (relevant email address and phone numbers).
11. Community notification procedures.

The FCMP will at a minimum include the following:

1. The name and telephone number of a contact person who can be reached 24 hours a day via telephone regarding construction or construction traffic complaints or emergency situations.
2. An up-to-date list of local police, fire, and emergency response organizations and procedures for the coordination of construction activity, potential delays, and any alerts related to unanticipated road conditions or delays, with local police, fire, and emergency response agencies. Maps showing access to and within the site and to adjacent properties will be provided.
3. Construction plans and procedures to address community concerns and to notify City personnel of key construction activities; temporary construction fencing and maintenance of construction areas within public view; noise and vibration controls; dust management and control; and worker education on required mitigation measures included in the Project's Mitigation Monitoring Program and best practices to reduce disturbances to adjacent and nearby land uses.
4. Procedures for the training and certification of flag persons.
5. To the extent known, identification of the location, times, and estimated duration of any roadway closures; procedures for traffic detours, pedestrian protection, reducing effects on public transit and alternate transportation modes; and plans for use of protective devices, warning signs, and staging or queuing areas.
6. The location of temporary power, portable toilet and trash and materials storage locations.
7. The timing and duration of any street, sidewalk and/or lane closures will be approved in advance by the City. As traffic lane, parking lane, and/or sidewalk closures are anticipated, worksite traffic control plan(s), approved by the City, will be developed and implemented to route vehicular traffic, bicyclists, and pedestrians around any such closures. As applicable at the time of construction, such notices will be made available in digital format for posting on each City website and distribution via email alerts on electronic platforms such as the County of Los Angeles' "Gov Delivery" system. The FCMP will be updated weekly during the duration of project construction, as determined necessary by the City.

The FCMP will require that review and approval of any proposed lane closures include coordination with the Culver City Fire and Police Departments to minimize potential effects on traffic flow and emergency response.

8. Provisions that staging of construction equipment and materials will be accommodated within the Project Site and that construction worker parking will be accommodated on the Project Site and/or at off-site locations to be determined and disclosed, potentially with shuttles to and from the Project Site.

PDF-TRAF-2: Transportation Demand Management (TDM) Program. The Project will implement TDM measures that include, but are not limited to, those listed below subject to the Culver City Transportation Department review and approval prior to issuance of the first Temporary Certificate of Occupancy (TCO) for the Project in order to reduce drive-alone vehicle trips to/from the Project Site by residents, visitors and employees, as well peak hour traffic. The TDM strategies are necessary to comply with the TDM and trip reduction requirements of CCMC Section 07.05.015, as well as the City's design requirements for the Project.

On-Site Enhancements - The Project design will incorporate mobility features to encourage alternative transportation modes. The features will be designed in accordance with requirements and standards.

- Pedestrian Connections. The Project will provide exclusive pedestrian access separate from vehicular driveways. The Project will provide internal walkways that connect the pedestrian access points to off-site pedestrian facilities, rideshare, and transit.

- Bicycle Parking and Amenities. The Project will provide both short-term and long-term bicycle parking spaces on-site in accordance with CCMC requirements. Short-term bicycle parking, which will include bicycle racks, will be located near the pedestrian entrance. Long-term bicycle parking, which will include bicycle lockers or secure bicycle enclosures, will be placed in an accessible weather protected location.

- EV Parking. In accordance with CCMC Section 17.320.035.Q, at least 40% of the onsite parking supply will have EV capability, including EV Capable spaces (20%), EV Ready spaces (10%), and Full EV Charger/Charging Stations (10%).

- Rideshare Dropoff. A dedicated curb cut for rideshare drop off and pickup shall be provided for Project use along the drive along the west side of the property, reducing reliance on private vehicles and traffic impacts due to double parking.

Off-Site Enhancements - The Project will improve and contribute toward improvements to off-site mobility facilities to encourage alternative transportation modes.

- Mobility Fees. In accordance with CCMC Section 15.06.500, the Project will be subject to contributing its fair share toward funding the City's mobility infrastructure and improvement projects intended to reduce vehicle miles travelled (VMT) and support housing and job growth.

Other TDM Strategies - The Project will implement TDM strategies to reduce peak hour vehicular traffic and air emissions to and from the Project Site. The following details the minimum TDM strategies necessary to comply with the TDM and trip reduction requirements of City Municipal Code Section 07.05.015, as well as City's design requirements for the Project:

- Transportation Information Center (TIC). The Project will provide a TIC, a commuter information center where residents, employees, and visitors can obtain information regarding commute programs and individuals can obtain real-time information for planning travel without using an automobile. A TIC provides information about transit schedules, commute planning, rideshare, telecommuting, bicycle routes and facilities, and facilities and resources for carpoolers, vanpoolers, bicyclists, transit riders, and pedestrians. The TIC can be provided via a bulletin board, display case, or kiosk, as well as virtually, providing every resident, employee, and visitor access to commuter information through a website portal.

- Bicycle Parking and Amenities. The Project will support bicycling to work through the provision of bike storage facilities throughout the Project site. Bicycle parking will be provided in accordance with the City Municipal Code requirements for the Project and will include short-term facilities (e.g., bicycle racks) and secure long-term bicycle parking (e.g., fully enclosed rooms or bicycle lockers that protect the bicycle from inclement weather and are accessible only to the owner).

- Pedestrian-Friendly Environment. The Project is designed to be pedestrian-friendly and accessible to the local neighborhood. The Project's pedestrian access points will be located separate from vehicular access points. To promote walkability within and around the Project site, internal pedestrian pathways will provide a safe and direct connection to external public pedestrian facilities. Safety measures will also be implemented at the Project driveway to ensure safe crossings to limit potential vehicular-pedestrian conflicts.

- Employee Parking. At least 10% of employee parking will be reserved, as signed on the spaces, for use by potential carpool or vanpool vehicles and located as close as practical to employee entrances. This preferential parking will be identified on the site plan accompanying the application for a building permit. Vanpool spaces will have a minimum parking space dimension of nine feet wide by 18 feet in length and provide a minimum interior vertical clearance of eight feet two inches. A safe and convenient zone in which vanpool and carpool vehicles may deliver or board their passengers will also be provided.

- Bus Stop Improvements. If deemed necessary by the City, bus stop improvements will be provided to the satisfaction of the City Director of Transportation.

Plan/Program Management - The Project will take appropriate measures to help future residents and employees manage each TDM Plan element and maximize program participation through consolidation of information and proactive engagement. The following will be provided as part of the TDM Plan:

- Project Transportation Coordinator. A Transportation Coordinator will be designated for the site and will be responsible for implementing, coordinating, and maintaining the elements of the TDM Plan. The identity and contact information for the Transportation Coordinator will be supplied to the City and kept current.

- Transportation Information Packet for New Residents and Employees. Each new resident and employee will receive an information packet summarizing the transit and transportation alternatives available to Project tenants. The packet will emphasize the location of the TIC and include the contact information of the Transportation Coordinator.

Mobility Hub Support and Alternative Transportation - The Project will incorporate measures and design elements to support first-mile/last-mile service connection for transit users and reduce reliance on personal automobiles. The following will be provided as part of the TDM Plan:

- Bike Repair Station. The Project will provide an on-site bike parking station for use by Project residents and employees that has a space and basic tool set for bike repairs.

- Subsidized Shared-Ride/Uber/Lift Service. Employees who arrive to work via a means other than a single-passenger vehicle or utilize the carpool matching service will automatically be registered in a Subsidized Shared-Ride/Uber/Lyft Service by which, upon request to the Transportation Coordinator, the employee will be given a voucher to travel home or Uber/Lyft (or similar shared ride service) in case of illness or emergency. The Project will provide up to $750 in total for this program every year.

The subsidy will be required for the first two years after a final Certificate of Occupancy for the Project is obtained.

- Transit Passes. The Project will provide up to $500 per pass per year of subsidies for up to five Transit Access Passes (TAP) cards for a period of three years for employees who opt to take Metro instead of personal vehicles and who will not be provided on-site parking accommodations and will not receive a car share subsidy.

Construction Schedule/Activities

Project construction is anticipated to commence as early as the second quarter of 2026 with full build-out anticipated to occur by the first quarter of 2029, for a total of approximately 29 months of construction. Construction phasing would include (i) demolition, shoring, and excavation; (ii) underground work; (iii) concrete structures; (iv) wood framing and building envelope; (v) mechanical, electrical, plumbing, and finishes; and (vi) site work.

Necessary Approvals

The Applicant requests approval of the following actions:

1. Site Plan Review. Site Plan Review approving the Project and confirming the Project complies with the applicable requirements of the CCMC. (CCMC §§ 17.500.010; 17.540.)

2. Density and Other Bonus Incentives. A density bonus to ensure appropriate implementation of the requirements of the DBL and other bonus incentives, pursuant to California Government Code Section 65915, or as may be amended, and the goals and policies of the City's General Plan. (CCMC §§ 17.500.010; 17.580.)

3. Extended Construction Hours. Approval of a 7:00 AM daily start, Monday through Friday, and an 8:00 AM daily start on Saturdays for the duration of construction. (CCMC § 9.07.035.)

Assessment of Class 32 In-Fill Development Project Exemption

Exemption Criteria

Article 19 of the CEQA Guidelines (CEQA Guidelines Sections 15300 to 15333) includes a list of classes of projects that have been determined to not have a significant effect on the environment and, as a result, are exempt from review under CEQA.

This document demonstrates that the Project, which includes the demolition of the existing buildings on the Project Site as well as the construction of a new building, qualifies for an exemption under CEQA Guidelines Section 15332, In-Fill Development Projects, as a Class 32 project that meets the following conditions:

a. The project is consistent with the applicable general plan designation and all applicable general plan policies as well as with applicable zoning designation and regulations.

b. The proposed development occurs within city limits on a project site of no more than five acres substantially surrounded by urban uses.

c. The project site has no value as habitat for endangered, rare or threatened species.

d. Approval of the project would not result in any significant effects relating to traffic, noise, air quality, or water quality.

e. The site can be adequately served by all required utilities and public services.

The analysis below describes the Project's consistency with the applicable Class 32 exemption criteria.

Criterion (a): The project is consistent with the applicable general plan designation and all applicable general plan policies as well as with applicable zoning designation and regulations.

The Project Site is located in the Fox Hills neighborhood in Culver City. The Project Site is designated Mixed Use Medium in the City's General Plan Land Use Element Map[5] and is zoned Mixed Use Medium (MU-MD).[6] As described in the CCMC, Chapter 17.220.010, the MU-MD zoning permits mixed use, residential, office, and commercial uses, including anchor tenants, entertainment, and restaurant uses that may share parking, and serve a regional market area. The mixed-use Project's proposed residential and commercial uses are consistent with the General Plan designation and zoning for the Project Site.

The City's General Plan has several policies that are relevant to the Project. **Table 2**, *Consistency with Applicable Culver City General Plan Goals and Policies*, provides an evaluation of the Project's consistency with applicable Culver City General Plan objectives and policies.

TABLE 2
CONSISTENCY WITH APPLICABLE CULVER CITY GENERAL PLAN GOALS AND POLICIES

Goals, Objectives and Policies	Consistency Analysis
Land Use Element	
Policy LU-1.1. Higher densities near transit. Allow higher residential density and intensity in mixed use developments to support walkability and transit use. **Policy LU-1.3: Development near transit stations.** Incentivize jobs and housing growth around high-quality transit stops and along transit corridors to reduce reliance on personal automobiles. Incentivize affordable housing as standalone projects and mixed-income projects within transit-oriented communities.	**Consistent.** The Project will support the transit-oriented communities goals of the General Plan as it will provide a mix of higher density residential and commercial uses, encourage alternative modes of transportation, and improve the walkability of the neighborhood. As noted above, the Project is in close proximity to multiple public transit options, including the Culver City Transit Center, which is located 0.7 miles west of the Property, and multiple bus stops that are just steps from the Project. Additionally, the Project's provision of 104 bicycle parking spaces and other bicycle-centric amenities like a bicycle repair station will facilitate and encourage bicycle transportation. Similarly, the Project will encourage the use of electric vehicles given that 40% of the Project's parking spaces (i.e., 211 out of 524 parking spaces) will be EV-ready, EV-capable, or full EV parking spaces. Overall, the Project's emphasis on alternative modes of transportation is aligned with the City's future goals for the area. As shown on Figures 30 and 31 of the General Plan, the Project Site is located within a proposed Microtransit Service Area and adjacent to two proposed Mobility Hubs. As such, the Project's forward-looking access and transportation design features are aligned with the City's future transportation infrastructure improvements for the area.
Goal LU-2. Housing opportunity and equality. A diverse range of housing options create equitable opportunity for people of all ages, races/ethnicities, abilities, socio-economic status, genders, and family types to live in Culver City. **Policy LU-11.2: Diversity of housing types.** Encourage a variety of housing types to equitably serve varying	**Consistent.** The Project would incorporate a variety of floor plans (studios, 1-BR, 2-BR and 3-BR units) with a total of 321 market-rate units and 30 low-income affordable housing units. Since the Project will incorporate a range of unit types, it will accommodate a variety of household sizes, types, and incomes, thereby providing housing opportunities for residents across multiple socioeconomic segments. Additionally, the Project's affordable housing units address the City's ongoing need for affordable housing in areas close to public transit and

[6] City of Culver City, City of Culver City Zoning Map, map15_zoning.pdf (https://www.culvercity.org/files/content/public/v/12/city-projects/zoning-code/culver-city-zoning-map_091224.pdf). Accessed November 27, 2024.

TABLE 2
CONSISTENCY WITH APPLICABLE CULVER CITY GENERAL PLAN GOALS AND POLICIES

Goals, Objectives and Policies	Consistency Analysis
household types, including, but not limited to, single-family attached and detached units, accessory dwelling units, duplexes, and triplexes.	employment centers. The inclusion of affordable housing in a mixed-use setting ensures that lower-income residents can access essential services, employment opportunities, and transportation options.
Policy LU-1.2: Mix of uses. Encourage more mixed use and affordable housing to support a regional jobs and housing balance, to promote walk-to-work options, and to incorporate public- and neighborhood-serving uses. **Policy LU-4.3: Mixed use development.** On large nonresidential sites, study relaxing of development standards and raising of height limits to allow concentrated, new vertical residential development to maintain existing commercial, industrial, and studio uses, and to create horizontal mixed use development on the site. **Goal LU-8. Mixed use centers.** Mixed use centers maintain a diversity of neighborhood-commercial serving uses, publicly accessible open space, and housing to create vibrant, walkable places. **Policy LU-8.1: Mix of uses.** Encourage more variety of public- and neighborhood-serving uses and affordable housing. **Policy LU-9.1. Complete neighborhoods.** Promote new commercial uses and revitalize existing commercial areas in locations that provide convenient access to a range of goods and services for Culver City's residential neighborhoods. **Policy LU-11.6. Commercial uses in residential neighborhoods.** Allow limited neighborhood-supportive retail and service uses in existing residential neighborhoods on collector and arterial street types to promote complete, walkable neighborhoods.	**Consistent.** The proposed mixed-use Project is consistent with multiple General Plan goals and policies geared toward bringing more mixed-use developments to the City. The Project would incorporate both 351 much-needed residential units (including 30 affordable units) and 6,825 sf of neighborhood-serving retail space. By incorporating a commercial component, the Project would be able to bring a new business into the City, which will result in new jobs and revenue streams. It will also improve the walkability of Fox Hills, because residents will be able to walk or bike to the Project Site in order to talk advantage of the retail space. Thus, the Project would help create a "complete neighborhood" where residential and neighborhood-serving retail uses can coexist.
Policy LU-1.7. Gathering spaces near mobility hubs and transit stations. Partner with project developers to create community gathering spaces, including plazas and pocket parks, near transit stations and mobility hubs. **Policy LU-8.2. Gathering spaces.** Partner with project developers to create community gathering spaces, including plazas and pocket parks, in mixed use districts. Work with development projects to provide publicly accessible, centrally-located private open space with amenities as part of their site plans. **Policy LU-14 Public realm design.** A network of attractive, pedestrian-oriented, human-scale and well-landscaped streets and civic spaces throughout the city for all ages and abilities. **Policy LU-14.2: Create an attractive pedestrian environment.** Facilitate a diverse and attractive pedestrian environment through the provision of street furniture, lighting, and other amenities. **Policy LU-14.3: Pedestrian connections and sidewalks.** Improve pedestrian connections and sidewalk infrastructure across the city, especially between residential and commercial areas, keeping in mind mobility needs of children, families, seniors, and people with disabilities. **Policy LU-14.5. Plazas and gathering places**.	**Consistent.** The Project would include a 6,169-sf public plaza at the southwest corner of the Property adjacent to the retail space. The public plaza will include a deck with outdoor seating interspersed with shade trees and grassy lawn areas. The public plaza was purposefully situated at the southwest corner of the Project Site because it will be directly across the street from the Fox Hills Parkette, which is easily accessible via the existing crosswalk at the intersection of Buckingham Parkway and Hannum Avenue. This will create a meaningful neighborhood node that will make it easy for nearby residents to take advantage of the public plaza and the retail space. Pedestrian access to the Project Site will also be prominent. The ground-floor residential units that face Buckingham Parkway or Slauson Avenue would all have direct access to the street, giving the Project a neighborhood feel. Moreover, there are additional residential entrances throughout the Project, including through the parking garage and lobby, on paths through Courtyards 1 and 2, and via an entrance off of Slauson Avenue. The Project incorporates more than 39,000 sf of landscaping, which will include a wide variety of tree, shrub, and plant species. The landscaping would include a total of approximately 139 trees, which includes protecting in place all of the existing mature street trees along Slauson Avenue and Buckingham Parkway. Additionally, in coordination with the City's Public Works Department, Project construction will include widening the sidewalk and the existing tree wells along Buckingham Parkway, which will be beneficial for the long-term health of the existing

TABLE 2
CONSISTENCY WITH APPLICABLE CULVER CITY GENERAL PLAN GOALS AND POLICIES

Goals, Objectives and Policies	Consistency Analysis
Improve existing and create new plazas and public gathering places throughout the city. **Policy LU-15.2: Active street frontages.** Require active street frontages, including the following: • Locating uses that engage the street on the ground floor; Creating comfortable transitions between the ground floor of a building and the street; • Using taller floor to floor heights, greater articulation, and finer details at ground floors; • Creating enhanced entrances; and • Encouraging ground-floor residential units with stoops, dooryards, or similar features on major corridors outside core business areas.	trees. Moreover, there are 106 existing trees on the Property, many of which are in poor health. As such, the Project would result in a net increase of approximately 33 trees. Additionally, the exterior landscaping and outward-facing residences and courtyards will enhance the streetscapes around the Project Site, which would in turn increase the walkability and safety of the area.
Policy LU-2.6. Walkable connections in multifamily development. Encourage new multifamily developers to provide convenient, walkable connections to nearby trails, transit, and open space to promote active lifestyles. **Goal LU-3 Walkable development.** Smallscale development, building reuse, and efficient parking on small sites encourage a walkable urban environment. **Policy LU-15.1. Walkable and inviting buildings and spaces**. Require building design that creates walkable and inviting spaces, such as locating parking behind buildings, allowing for outdoor plazas and dining, and locating building frontages in close proximity to the sidewalk edge, where appropriate.	**Consistent.** The Project will further multiple transportation-oriented goals of the General Plan because it will encourage alternative modes of transportation and improve the walkability of the neighborhood. As noted above, the Project is in close proximity to multiple public transit options. Additionally, the Project's provision of 104 bicycle parking spaces and other bicycle-centric amenities like a bicycle repair station will facilitate and encourage bicycle transportation. Similarly, the Project will encourage the use of electric vehicles given that 40% of the Project's parking spaces (i.e., 211 out of 524 parking spaces) will be EV-ready, EV-capable, or full EV parking spaces. Additionally, the Project would improve the walkability of the neighborhood. Neighbors would be able to walk to the Project to take advantage of the retail space and the public plaza. Additionally, the exterior landscaping and outward-facing residences and courtyards would enhance the streetscapes around the Project Site, which would in turn increase the walkability and safety of the area.
Goal LU-7: Fox Hills. A vibrant, mixed use Fox Hills area supports the redevelopment of surface parking, introduction of mixed use, and activation of streets and open spaces, establishing a cohesive, walkable center that is well-connected to its surrounding neighborhoods.	**Consistent.** The Project would be consistent with the General Plan goals that are specific to the Fox Hills neighborhood. As evident by General Plan Policies LU 7.1-7.6, the City envisions transforming Fox Hills into a "vibrant," "walkable" community with "a variety of uses." The Project would be aligned with these aspirations. The mixed-use development would bring both much-needed housing to the City and a convenient, neighborhood-serving retail amenity that would be beneficial to the neighboring community. Additionally, as discussed above, the Project is designed strategically to activate the streetscape and improve the walkability around the Project Site. The perimeter landscaping and outward-facing residences and courtyards would create a more walkable community around the Project Site. The Project would also provide more than 45,000 sf of open space, of which 6,169 sf would be publicly accessible. The public plaza and pocket park at the southwest corner of the Project Site would be an amenity for the entire neighborhood and would be harmonious with the Fox Hills Parkette across the street. Overall, the Project would provide contributing features to Fox Hills while reinvigorating an underutilized office complex. Thus, the Project would be consistent with the General Plan's goals for Fox Hills.
Policy LU-14.6: Sustainable design in the public realm. Encourage use of sustainable design features in the public realm, including sustainable building and construction materials, permeable paving, drought-tolerant landscaping, and green infrastructure. **Policy LU-14.7. Improved micro-climate.** As temperatures are expected to rise due to climate change, reduce paved areas that contribute to the urban heat island effect. Increase permeable and landscaped areas. **Policy LU-14.8. Improved street tree canopy.** Increase the size and extent of the urban street tree	**Consistent.** The proposed Project incorporates more than 39,000 sf of landscaping, which would include a wide variety of tree, shrub, and plant species. The landscaping would include a total of approximately 139 trees, which includes protecting in place all of the existing mature street trees along Slauson Avenue and Buckingham Parkway. Additionally, in coordination with the City's Public Works Department, Project construction would include widening the sidewalk and the existing tree wells along Buckingham Parkway, which would be beneficial for the long-term health of the existing trees. Moreover, according to the Tree Evaluation Report prepared by Arborgate Consulting, Inc. (see Attachment A of this memorandum), there are 106 existing trees on the Property, many of which are in poor health. As such, the Project would

TABLE 2
CONSISTENCY WITH APPLICABLE CULVER CITY GENERAL PLAN GOALS AND POLICIES

Goals, Objectives and Policies	Consistency Analysis
canopy to help shade streets and sidewalks. Review approved street trees and study inclusion of larger tree choices that provide more shade. Review and modify street tree placement and tree well standards to ensure long-term success of street trees. **Goal LU-16 Landscape design for resilience.** Landscape design standards for new development enhance habitat quality, reduce water use, support a diverse ecosystem, and increase resilience to a changing climate.	result in a net increase of approximately 33 trees, which will expand the City's tree canopy and support the City's microclimate goals. Additionally, the landscaping would emphasize drought-tolerant and native plant species, and the Project would incorporate various water conservation features, including smart irrigation controllers with rain sensors, low angle spray heads, and low volume drip tubing. Thus, the Project would be consistent with the General Plan's many landscaping and tree-related goals.
Goal LU-15 Architecture and site design. High level of quality in architecture and site design in all renovation and construction of buildings. **Policy LU-15.3. Architectural and visual interest in new development.** Encourage distinctive architecture and elements that add visual interest to buildings to enhance people's perceptions of Culver City as an interesting and inviting place. **Policy LU-15.5: Utility location.** Minimize the detrimental appearance of accessory utility equipment (e.g., transformers, cable cabinets, utility meters, and utility lines) by integrating them into less prominent areas of the site or by screening them with landscaping, artistic features, or architectural materials compatible with the primary structures. Ensure that such facilities are sited so as not to impede pedestrian access. **Policy LU-15.7: Street design integration.** Ensure new street frontage designs are integrated with street design standards for the immediate vicinity or neighborhood.	**Consistent.** The Project would replace an outdated office building and parking structure with a modern, high-quality architecture development. The building would be designed to mirror the wedge shape of the Project Site by incorporating various fingers that branch out toward Buckingham Parkway and that are separated by courtyard spaces. Additionally, the building steps back in height at the lower portions of the Project Site. The building would use a mix of stucco and metal finishes in warm neutral colors, which are intended to help bridge the gap between the cool, austere commercial buildings to the west and the more traditional residential developments to the east and south. With a mix of materials, varied building heights and components, and a high amount of landscaping on the perimeters of the site, the Project would promote visual interest through its design. Furthermore, utilities would be screened from public view to the extent feasible and would be sited so as not to impede pedestrian access.
Mobility Element	
Goal M-1: Safety. A transportation network that is safe and accessible for all travel modes and people of all ages, physical abilities, and financial means.	**Consistent:** The proposed mixed-use building would prioritize pedestrian safety by ensuring access is well-integrated into the pedestrian infrastructure. The Project would incorporate pedestrian-scaled lighting, walkways with enhanced visibility, and buffer zones to separate pedestrians from vehicles, addressing safety concerns for individuals of all ages and physical abilities. The Project would include secure bicycle parking and facilities to encourage cycling as a viable transportation option. The Project would include bike racks and storage areas for both residents and employees, promoting the use of non-motorized transportation modes. The Fox Hills neighborhood is served by several bus lines, and the development would be strategically located to provide convenient access to public transportation. The proximity to bus stops would reduce the need for car travel, encouraging residents and employees to use transit as their primary mode of transportation. In addition, the development would comply with the Americans with Disabilities Act (ADA) requirements.
Parks Recreation and Public Facilities Element	
PR-1.1: Park walkability. Strive for all residents to be within a ten-minute walk of parks, open spaces, and joint use facilities.	**Consistent:** The Fox Hills neighborhood is centrally situated within Culver City and is well-served by a variety of parks and open spaces. Fox Hills Park is located approximately 0.3 miles, or less than a 10-minute walk, south of the Project Site and offers a variety of recreational facilities, including sports fields, playgrounds, and open space. Additionally, the Fox Hills Parkette is located directly across the street from the Project Site. The Project is located in a well-connected urban area with good pedestrian infrastructure. The Fox Hills neighborhood benefits from a grid of streets with sidewalks, crosswalks, and pedestrian-friendly features that promote walkability. The proximity of the development site to Fox Hills Park and Fox Hills Parkette, along with

TABLE 2
CONSISTENCY WITH APPLICABLE CULVER CITY GENERAL PLAN GOALS AND POLICIES

Goals, Objectives and Policies	Consistency Analysis
	other nearby open spaces, provides a clear path for residents to access these amenities without the need for a vehicle.
Noise Element	
Goal N-2: Adjacent uses. A City review and approval process for new development that ensures projects are compatible with adjacent land uses.	**Consistent:** Based on the noise analysis, which is summarized below under Criterion (d), impacts related to noise during construction and operation of the Project would be less than significant. The predominant existing noise source surrounding the Project Site is traffic noise. Secondary noise sources include commercial activities, such as loading dock/delivery truck activities, trash compaction, and refuse service activities, from the surrounding commercial land uses. The Project includes commercial and residential uses that would be compatible with the adjacent land uses with regard to noise sources and receptors.
Safety Element	
Policy 9: S-7.5: Comply with minimum standards for fire protection. Require new development to meet the State's minimum standards for fire protection unless the City's Municipal Code defines more stringent standards. Require that ingress and egress routes be constructed using the most current State Fire Safe Regulations, Fire Code, and/or Municipal Code that meets these minimum requirements. These standards include: • Adequate road widths to accommodate emergency vehicles and developments; and • Enforcing Municipal Code provisions that require automatic fire extinguishing systems and other fire safety standards; • Minimum fuel modification requirements in SRA and VHFHSZs; • Fire protection plans for new development in VHFHSZ; • Ability for a safe and efficient fire department response; • Adequacy of water supply for new development (i.e., maintenance and long-term integrity); and • Adequacy of fire flow (gallons per minute) to extinguish a fire at the proposed development.	**Consistent:** The Project would comply with applicable fire protection design standards as provided in the Culver City Building Code and the California Building Code. Fire sprinklers would be installed in the buildings. Culver City's standard conditions of approval generally require that plans for building construction, fire flow requirements, fire protection devices (e.g., sprinklers and alarms), fire hydrants and spacing, and fire access including ingress/egress, turning radii, driveway width, and grading would be prepared for review and approval by the CCFD.
Community Health and Environmental Justice Element	
Goal CHEJ-5. Quality housing. Culver City maintains a supply of safe and quality housing. **Goal CHEJ-6.1. Equitable housing and economic strategies**. Prioritize solutions that directly address the concerns of low-income households and residents.	**Consistent:** The Project furthers numerous housing goals of the General Plan because it will provide 351 new residential units to the City, including 30 units specifically for low income households. This directly supports the City's Regional Housing Needs Assessment (RHNA) housing growth needs. Moreover, the Project would provide a wide range of housing types—from studio apartments to three-bedroom units—which will accommodate a variety of household sizes, types, and incomes, thereby providing housing opportunities for residents across multiple socioeconomic segments.
Infrastructure Element	
Goal INF-2.1: Water conservation. Expand and enhance existing water conservation measures, mandates, and strategies to optimize wise use of water. **Goal INF-2.5: Drought-tolerant landscaping.** Provide resources and guidance for conventional lawn conversion to drought tolerant landscaping.	**Consistent:** The Project incorporates more than 38,000 sf of landscaping, which would include a wide variety of tree, shrub, and plant species. The landscaping would include a total of approximately 139 trees, which includes protecting in place all of the existing mature street trees along Slauson Avenue and Buckingham Parkway. Additionally, in coordination with the City's Public Works Department, Project construction would include widening the sidewalk and the existing tree wells along Buckingham Parkway, which would be beneficial for the long-term health of the existing trees. Moreover, according to the Tree

TABLE 2
CONSISTENCY WITH APPLICABLE CULVER CITY GENERAL PLAN GOALS AND POLICIES

Goals, Objectives and Policies	Consistency Analysis
	Evaluation Report prepared by Arborgate Consulting, Inc.(see Attachment A of this memorandum), there are 106 existing trees on the Property, many of which are in poor health. As such, the Project would result in a net increase of approximately 33 trees, which would expand the City's tree canopy and support the City's microclimate goals. Additionally, the landscaping would emphasize drought-tolerant and native plant species, and the Project would incorporate various water conservation features, including smart irrigation controllers with rain sensors, low angle spray heads, and low volume drip tubing. Thus, the Project is consistent with the General Plan's many landscaping and tree-related goals.
Conservation Element	
Goal C-2.4*:* Tree planting. Plant and maintain trees to sequester carbon, reduce urban heat, provide habitat, and contribute to the city's character.	**Consistent:** See consistency analysis above under Goal INF-2.1 and INF-2.5.

SOURCE: City of Culver City, Land Use Element, 2024; Mobility Element; 2024; Parks Recreation and Public Facilities Element; 2024; Noise Element; 2024; Safety Element, 2024Community Health and Environmental Justice; 2024; Conservation Element, 2024; ESA, 2025.

As shown in Table 2, the Project would be consistent with applicable Culver City General Plan Land Use Element goals and policies. In addition, the Project would be consistent with applicable Culver City General Plan Mobility Element, Parks Recreation and Public Facilities Element, Noise Element, Safety Element, Community Health and Environmental Justice Element, Infrastructure Element, and Conservation Element goals and policies. As discussed above, the proposed residential and commercial use would be consistent with the Mixed-Use Medium General Plan designation and MU-MD zoning. Therefore, the Project would meet this criterion.

Criterion (b): The proposed development occurs within city limits on a project site of no more than five acres substantially surrounded by urban uses.

The Project Site is located within the City of Culver City limits on an approximately 4.49-acre site within a developed urban neighborhood. The Project Site is surrounded by urban uses as shown in Figure 2, above. Therefore, the Project would meet this criterion.

Criterion (c): The project site has no value as habitat for endangered, rare or threatened species.

The Project Site is located within a highly developed, urbanized area. As described above, the Project Site is currently developed with an existing 112,276-sf office building, a three-story parking garage, and related surface parking. Thus, the Project Site does not include any suitable habitat for sensitive animal or plant species. Furthermore, as discussed above, the area surrounding the Project Site is fully developed with urban uses. Therefore, the Project would meet this criterion.

Criterion (d): Approval of the project would not result in any significant effects relating to traffic, noise, air quality, or water quality.

Traffic

The following analysis of potential traffic impacts is based on the Transportation Assessment Study for the 100 Corporate Pointe Walk (Transportation Assessment) prepared by Gibson Transportation Consulting, Inc., which is provided as Attachment B of this memorandum. The Transportation Assessment evaluates the potential transportation impacts associated with the development of the Project. The findings of the Transportation Assessment that apply to the transportation related questions included in Appendix G of the CEQA Guidelines are summarized below.

- **Would the project conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?**

As evaluated in Chapter 4, pages 45-50, in Attachment B of this memorandum, the Project would be consistent with the Culver City Traffic Code, Chapter 7.05; the policies of the General Plan Mobility Element; the policies and objectives of the Gateway Neighborhood Design Guidelines; the Neighborhood Traffic Management Program; the goals, objectives and policies of the Short-Range Transit Plan; actions of the Bicycle and Pedestrian Action Plan; policies of the Complete Streets Policy; and the Local Roadway Safety Plan.

In addition, the Project would not conflict with improvements contemplated within the Safer Fox Hills Project, which is a neighborhood-focused initiative that brings over 2.5 miles of new protected bike lanes to Green Valley Circle, Buckingham Parkway, Bristol Parkway, and Hannum Avenue. In addition to expanding bicycle infrastructure, the Safer Fox Hills project adds three new high-visibility crosswalks across Green Valley Circle and introduces a range of additional pedestrian safety and traffic calming improvements throughout the neighborhood. The Safer Fox Hills Project contemplates a protected intersection at Hannum Avenue and Buckingham Parkway, as well as a conventional bike lane on Buckingham Parkway adjacent to the Project Site. Development of the Project would not preclude future development of these transportation improvements identified in the Safer Fox Hills Project. Rather, the Project, with its various bicycle-centric amenities and neighborhood-serving retail use, is harmonious with the planned improvements under the Safer Fox Hills Project.

As such, the development of the Project would not conflict with a program, plan, ordinance, or policy addressing the circulation system. *Impacts would be less than significant.*

- **Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?**

Per the Guidelines, a "no impact" determination can be made for a project if any of the following screening criteria are met:

1. Small projects that result in less than 250 daily or 25 peak hour trips

2. Projects within 0.50 miles from these key transit hubs: Metro E (Expo) Line Culver City Station, Metro E (Expo) Line La Cienega Station, Westfield-Culver City Transit Center or Sepulveda/Venice Boulevard intersection

3. Projects located within any Transit Priority Area (TPA) where at least 15% of the on-site residential units are affordable

4. Affordable housing projects where 100% of the dwelling units are affordable

5. Local serving retail projects having less than 50,000 sf in size at a single store

If none of the above screening criteria are met, the Guidelines provide guidance for the further analysis of VMT, as discussed in the following section.

As discussed in Section 4B, *VMT Analysis – Land Use Projects,* of the Transportation Assessment, the Project does not meet any of the above screening criteria as identified in the Guidelines. Thus, further VMT analysis was required to determine if the Project would have a significant impact. The VMT Calculator utilized the Project's land uses and their respective sizes, including 321 market-rate multi-family units, 30 affordable units, and 4,742 sf of retail (or 6,825 sf of retail including 2,083 sf back of house retail space). Because the retail use is less than 50,000 sf, no further analysis was required for the retail component as it is neighborhood serving. Not accounting for any project design features or mitigations, the Project would result in a household VMT of 6.8 per capita, which is below the citywide household VMT threshold of 8.3 per capita. Thus, the Project does not result in a significant VMT impact, and no further mitigation would be required.

Nonetheless, the Project would implement strategies and action plans as part of a comprehensive TDM program in compliance with the requirements set forth in CCMC Section 07.05.015 to reduce single occupancy vehicle trips while promoting the use of alternative transportation modes, thereby further reducing Project VMT. In addition, the Project is not a transportation project that would induce automobile travel.

The Project, therefore, does not cause a significant impact relative to CEQA Guidelines Section 15064.3, Subsection (b). *No impacts would occur.*

- **Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?**

As discussed further in Section 4D, *Geometric Design Hazards Analysis*, in Attachment B of this memorandum, full vehicular access to the Project Site would be provided via one driveway providing commercial, guest, and residential access to the Project from a Fire Lane along the western boundary of the property. As noted in the Transportation Assessment, there are no unusual or new obstacles presented in the Project design that would be considered hazardous to motorized vehicles, non-motorized vehicles, or pedestrians. Access to the Project would be consolidated to one driveway in order to minimize potential hazards to pedestrians, bicyclists, and motorists along Buckingham Parkway and Hannum Avenue.

The Transportation Assessment further concludes that the proposed mixed-use Project is compatible with the surrounding area. There are similar commercial uses to the west and north and similar residential uses to the east and south. As such, the Project would not be introducing a new use to the area that would be considered incompatible such that it would create traffic hazards.

According to the Transportation Assessment, based on the site plan review and design, the Project does not present any geometric design features that would substantially increase hazards related to traffic movement, mobility, or pedestrian accessibility and, thus, Project impacts are considered less than significant. Additionally, pedestrian access to the Project would be provided via various separate entrances along all sides of the Property, and pedestrian sidewalks would surround the Project's perimeter along all sides. *Impacts would be less than significant.*

- **Would the project result in inadequate emergency access?**

While it is expected that the majority of construction activities for the Project would be confined on-site, construction activities may temporarily affect access on portions of adjacent streets during certain periods of the day, including during construction of potential off-site infrastructure upgrades/improvements (i.e., water and sewer lines). However, if any temporary lane or street closures are needed during project construction, such closures would be coordinated with the City prior to implementation. Additionally, as provided above in the Project

Description subsection of this memorandum, the Project would implement PDF-TRAF-1, Construction Management Plan, which includes designation of a haul route, to ensure that adequate emergency access is maintained during construction. As such, Project construction would not result in inadequate emergency access.

Likewise, operation of the Project would also not result in inadequate emergency access. As shown above in Figure 3, the Project will include the construction of a new fire access lane along the entire western edge of the Project Site. Additionally, future driveway and building configurations would comply with applicable fire code requirements for emergency evacuation, including proper emergency exits for patrons and employees. Moreover, the Project's access and circulation plans would be subject to review and approval by the Culver City Fire Department (CCFD) as necessary.

Therefore, the Project would not result in inadequate emergency access. *Impacts would be less than significant.*

Conclusion: Based on the Transportation Assessment, the Project would have a less than significant transportation impact pursuant to CEQA. For additional details, refer to the Transportation Assessment provided as Attachment B of this memorandum.

Noise

The following review of potential noise impacts is based on the Noise and Vibration Technical Report prepared by ESA (included as Attachment C of this memorandum) for the Project. The Noise and Vibration Technical Report evaluates the potential noise and vibration impacts associated with construction activities, surface transportation, and other aspects of Project construction and operations that have the potential to impact noise sensitive land uses. The findings of the Noise and Vibration Technical Report that apply to the noise related questions included in Appendix G of the CEQA Guidelines are summarized below:

- **Would the Project result in the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?**

As analyzed in Section 5.1 in Attachment C of this memorandum, construction of the Project would have the potential to generate an increase in temporary or periodic noise through the use of heavy-duty construction equipment and through vehicle trips generated from construction workers traveling to and from the Project Site. Construction activities are temporary in nature and would be required to comply with Culver City's allowable construction hours of 8:00 A.M. to 8:00 P.M. on weekdays, 9:00 A.M. to 7:00 P.M. on Saturdays, and 10:00 A.M. to 7:00 P.M. on Sundays. The Project is requesting extended construction hours which, if approved by the City, would allow the Project's construction to begin at 7:00 a.m. daily on Monday through Friday and 8:00 a.m. daily on Saturdays for the entire duration of construction. The Project would include Project Design Features that would reduce noise and vibration during Project construction. As analyzed further in Attachment C of this memorandum, with the implementation of Project Design Features PDF-NOI-1 and PDF-NOI-2, which include noise reduction techniques that would comply with General Plan Policy N-4.4 during construction, such as noise barriers at the boundary or sound blankets over construction equipment. The addition of haul truck trips to roadways during construction would be less than the current traffic volumes on access roads and would result in barely perceptible (less than a 3 dBA) noise level increase, which would not increase noise levels by a "clearly noticeable" increase of 5 dBA over the ambient conditions. Off-site haul truck trips would not substantially increase noise levels over ambient conditions. In addition, construction activities would occur only during daytime hours within the allowable hours specified in the CCMC and per the Project's Extended Construction Hours request (if granted).

Project compliance with the City's noise standards for operational noise would be enforced through PDF-NOI-3 and PDF-NOI-4 in regards to mechanical equipment and amplified sound, respectively. In addition, other Project-related operational noise levels such as parking and loading and refuse collection being below the prevailing ambient noise-based thresholds (ambient noise level + 5 dBA) at off-site sensitive receptors would ensure that operational noise impacts are less than significant. The Project's noise impacts on existing off-site development from on-site operational stationary noise sources and traffic would not exceed the established thresholds of significance, as construction and operation of the Project would not increase ambient noise levels by 5 dBA or more. Based on the above, development of the Project would not result in the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards. *Impacts would be less than significant.*

- **Would the project result in generation of excessive ground-borne vibration or ground-borne noise levels?**

As analyzed in Subsection 5.4 in Attachment C of this memorandum, construction activities would generate vibration from the use of heavy equipment and haul trucks. Vibration velocities from the operation of construction equipment would range from approximately 0.003 to 0.089 inches per second PPV at 25 feet from the source of activity. The nearest structure to the Project is a commercial property to the west, approximately 35 feet away from the Project Site with a vibration threshold of 0.5 PPV in/sec. At that distance, the 0.5 PPV in/sec threshold would not be exceeded from construction activity at the Project Site as reference vibration levels are already below this level at 25 feet. The nearest sensitive receptor analyzed for human annoyance would be the residences approximately 100 feet to the east and south of the Project. At this distance, human annoyance levels from construction would either meet or be below the Federal Transit Authority (FTA) threshold of 75 VdB. In addition, during operation, ground-borne vibration generated by each of the operational activities would generate up to approximately 0.005 inches per second PPV adjacent to the Project Site. Project construction would not result in vibration levels that would exceed the potential building damage threshold of 0.5 inch-per-second PPV at the nearest buildings. Project operation would also not result in vibration levels that exceed the threshold of perceptibility of 0.01 inch-per-second PPV at the closest sensitive receptor locations. As such, operation of the Project would not result in vibration levels that would affect nearby sensitive receptors. Therefore, the development of the Project would not generate excessive ground-borne vibration or ground-borne noise levels. *Impacts would be less than significant.*

- **For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?**

As described in Subsection 5.4 in Attachment C of this memorandum, the Project Site is not located within an airport land use plan or within two miles of an airport. The nearest airport is the Los Angeles International Airport, located approximately 2.5 miles southwest of the Project Site. Therefore, the Project would not expose people in the Project vicinity to excessive noise levels from airport use. *Impacts would be less than significant.*

<u>Conclusion:</u> Based on the Noise and Vibration Technical Report, the Project would result in a less than significant noise impact pursuant to CEQA. For additional details, refer to the Noise and Vibration Technical Report provided as Attachment C of this memorandum.

Air Quality

The following review of potential air quality impacts is based on the Air Quality Technical Report prepared by ESA (included as Attachment D of this memorandum) for the Project. The Air Quality Technical Report evaluates the potential air quality impacts associated with construction activities, mobile sources, building energy demand, and other aspects of Project construction and operations that have the potential to generate criteria air pollutant emissions. The findings of the Air Quality Technical Report that apply to the air quality related questions included in Appendix G of the CEQA Guidelines are summarized below.

- **Would the project conflict with or obstruct implementation of the applicable air quality plan?**

As discussed under Impact AIR-1 in Subsection 5.1 of Attachment D of this memorandum, in response to Criterion 1, the Project would not increase the frequency or severity of an existing violation or cause or contribute to new violations for ozone. In addition, in response to Criterion 2, the Project incorporates into its design appropriate control strategies, such as compliance with SCAQMD Rule 403 (Control of Fugitive Dust) and Rule 1113 (Architectural Coatings), set forth in the 2022 AQMP for achieving its emission reduction goals and would be consistent with the demographic and economic assumptions upon which the plan is based. Furthermore, the Project would be consistent with and would not conflict with the General Plan. Based on the analysis provided in Attachment D of this memorandum, the Project would not conflict with or obstruct implementation of applicable air quality plans. *Impacts would be less than significant.*

- **Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard?**

Construction of the Project has the potential to create air quality impacts through the use of heavy-duty construction equipment and through vehicle trips generated from construction workers traveling to and from the Project Site. In addition, emissions of fugitive dust and volatile organic compounds (VOCs) would result from grading and construction activities. However, compliance with the mandatory requirements of SCAQMD Rule 403 (Control of Fugitive Dust), such as watering three times daily and employing track-out prevention measures, and compliance with architectural coating emission factors based on SCAQMD Rule 1113 (Architectural Coatings), would reduce emissions of fugitive dust and VOCs, respectively. Furthermore, compliance with PDF-AIR-1 would reduce the emissions of criteria pollutants attributable to construction. As discussed in Impact AIR-2 in Attachment D of this memorandum, construction-related daily emissions would not exceed the SCAQMD significance thresholds and emissions levels would be below the applicable thresholds. As it relates to operational emissions, and as discussed in Attachment D of this memorandum, operational criteria pollutant emissions were calculated for mobile, area, energy, and stationary sources (such as the conservatively-assumed emergency generator) for the Project's anticipated operational year of 2029. Operations would adhere to applicable regulatory standards, including the applicable Title 24 Green Building Code at the time of building permit applications. Operational emission estimates include compliance with SCAQMD Rule 1113 (Architectural Coatings), which limits the VOC content of architectural coatings. The Project's operational-related daily emissions would not exceed the SCAQMD significance threshold for any criteria pollutants. Based on the above, development of the Project would not result in a cumulatively considerable net increase of any criteria pollutant. *Impacts would be less than significant.*

- **Would the project expose sensitive receptors to substantial pollutant concentrations?**

As discussed under Impact AIR-3 in Attachment D of this memorandum, localized construction emissions would not exceed the SCAQMD localized significance thresholds. The Project would comply with applicable regulatory control measures including the California Air Resources Board (CARB) Air Toxics Control Measure that limits diesel powered equipment and vehicle idling to no more than five minutes at a location and would exceed the CARB In-Use Off-Road Diesel Vehicle Regulation that requires fleets to retire, replace, or repower older, dirtier engines with newer emission-controlled models. The Project would comply with other applicable control measures, such as SCAQMD Rule 403, Fugitive Dust, and Rule 1113, Architectural Coatings. Further, as discussed in Attachment D, the Project will include design feature, PDF-AIR-1, as described above, which will require all off-road diesel construction equipment greater than 25 hp to meet the U.S. Environmental Protection Agency Tier 4 Final off-road emission standards. Compliance with these regulations would minimize emissions of TACs during construction. During operation, localized operational emissions would also not exceed the SCAQMD localized significance thresholds. As discussed in Attachment D of this memorandum, the Project would not result in any carbon monoxide (CO) hotspots along surrounding roadways. Furthermore, toxic or carcinogenic air pollutants are not expected to occur in any substantial amounts in conjunction with operation of the proposed land uses within the Project Site. Based on the proposed land use, potential long-term operational impacts associated with the release of TACs would be minimal, regulated, and controlled, and would not be expected to exceed the SCAQMD significance thresholds. Therefore, the development of the Project would not expose sensitive receptors to substantial pollution concentrations. *Impacts would be less than significant.*

- **Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?**

As discussed under Impact AIR-4 in Section 5.1 of Attachment D of this memorandum, during construction, through compliance with applicable SCAQMD rules, no construction activities or materials are expected to create objectionable odors affecting a substantial number of people. In addition, as it relates to operation, the Project would not include any uses identified by the SCAQMD as being associated with substantial odors. As a result, the Project is not expected to discharge contaminants into the air in quantities that would cause a nuisance, injury, or annoyance to the public or property pursuant to SCAQMD Rule 402. As such, development of the Project would not result in other emissions adversely affecting a substantial number of people. *Impacts would be less than significant.*

Conclusion: Based on the Air Quality Technical Report, the Project would result in a less than significant air quality impact. For additional details, refer to the Air Quality Technical Report provided as Attachment D of this memorandum.

Water Quality

The following review of potential water quality impacts is based on and summarized from the Water Resources Technical Memorandum (Water Resources Memorandum) prepared by PSOMAS, provided as Attachment E of this memorandum. The Water Resources Memorandum evaluates the potential water quality impacts associated with the development of the Project. The findings of the Water Quality Memorandum that apply to the water quality related questions included in Appendix G of the CEQA Guidelines are summarized below.

- **Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?**

Point-source pollutants are discharged directly from pipes or spills. Raw sewage draining from a pipe directly into a stream is an example of a point-source water pollutant. The Project consists of the development of a mixed-use building with 6,825 sf of commercial space, 351 rental units, and 524 parking spaces. In other words, the Project does not propose any uses that would generate point-source pollutants. Therefore, water quality impacts due to point sources would be less than significant.

Non-point-source (NPS) pollutants cannot be traced to a specific original source. NPS pollution is caused by rainfall or snowmelt moving over and through surface areas. As the runoff moves, it picks up and carries away natural and human-made pollutants, finally depositing them into lakes, rivers, wetlands, coastal waters, and even underground sources of drinking water. These pollutants can include: excess fertilizers, herbicides and insecticides from agricultural lands and residential areas; oil, grease, and toxic chemicals from urban runoff and energy production; sediment from improperly managed construction sites, crop and forest lands, and eroding stream banks; salt from irrigation practices and acid drainage from abandoned mines; bacteria and nutrients from livestock, pet wastes, and faulty septic systems; and atmospheric deposition and hydro modification.

The Project would be subject to all existing applicable regulations associated with the protection of water quality. Construction activities would be carried out in accordance with the requirements of the National Pollutant Discharge Elimination System (NPDES) General Construction Permit issued by the Los Angeles Regional Water Quality Control Board (LARWQCB), as applicable. According to the Geotechnical Investigation report prepared for the Project by GEOCON, Inc. (2024) (Attachment F of this memorandum), the Project would conduct mass excavations to a maximum depth of 20 feet below grade and drilling for piles to a maximum depth of 30 feet.. GEOCON did not encounter groundwater during its investigation, which involved borings drilled to a maximum depth of 41½ feet below the existing ground surface. Based on the reported historic high groundwater levels in the site vicinity, the lack of groundwater encountered during the investigation, and the depth of proposed construction, static groundwater is neither expected to be encountered during construction nor to have a detrimental effect on the Project.

As construction of the Project would involve grading, including the export of approximately 10,000 cubic yards of soil, on an approximately 4.49-acre site, the Applicant would be required to submit a Storm Water Pollution Prevention Plan (SWPPP) to the City of Culver City Public Works Department as the Project would disturb more than one acre of soil. Consistent with the SWPPP, the Project would implement best management practices (BMPs) to manage storm water drainage during construction through methods such as retention basins of sufficient size; filtering by use of a barrier system, wattle or other method approved by the enforcing agency prior to being conveyed to a public drainage system; compliance with a lawfully enacted storm water management ordinance in order to avoid discharging pollutants into waterways; or other approved methods. Pursuant to CCMC Section 5.05.035, Requirements For Industrial/Commercial and Construction Activities, the Project would submit a local SWPPP and a Wet Weather Erosion Control Plan for construction activities consistent with the NPDES General Construction Permit to the City of Culver City Public Works Department. Therefore, development of the Project would not result in any significant effects related to water quality due to construction activities.

As an urban mixed-use development, operation of the Project would add typical, urban NPS pollutants to stormwater runoff. These pollutants are permitted by the countywide MS4 permit and would not exceed any receiving water limitations. In addition, as detailed in the Water Resources Memorandum (provided as Attachment E), the Project would comply with County and City Low Impact Development (LID) requirements, which require implementation of a stormwater treatment system that captures the 85th percentile runoff for treatment. Currently, the Project proposes to implement a drywell infiltration system. However, the feasibility of infiltration largely depends on whether the on-site soils have an adequate infiltration rate as determined by a percolation test performed by a licensed Geotechnical engineer. If infiltration is determined to be infeasible, the Project would consider biofiltration such as a Modular Wetland system as an alternative method of LID treatment. In addition, while there are currently no existing drainage features or water quality measures on-site, the Project proposes to introduce such features and additional measures that would improve the current water quality conditions of the Project Site and the surrounding area. Therefore, operation of the Project would not violate any water quality standards or waste discharge requirements. *Impacts would be less than significant.*

- **Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?**

As required by Section 303(d) of the Clean Water Act, the state and regional water boards assess water quality data for California's waters every two years to determine if they contain pollutants at levels that exceed protective water quality criteria and standards. The LARWQCB most recently prepared a list of impaired waterbodies in the region as part of the 2024 assessment cycle. This list is referred to as the 303(d) List. All waterbodies on the 303(d) list are subject to the development of a Total Maximum Daily Load (TMDL). As stated in the Water Resources Memorandum (provided as Attachment E), the Project Site is located within the Ballona Creek watershed. Constituents of concern listed for Ballona Creek under the 303(d) List include Copper, Trash, Cyanide (Toxic Organics), Zinc, Lead, Viruses (enteric), Toxicity, and Indicator Bacteria.

In terms of polluted runoff, the Project's proposed uses would be typical of residential and commercial uses and would not introduce substantial amounts (if any) of the constituents of concern or other sources of polluted water. As described above and in the Water Resources Memorandum, the Project would be required to comply with County and City LID requirements, which require implementation of a stormwater treatment system that captures the 85th percentile runoff volume for treatment. In compliance with this requirement, the Project currently proposes to implement a drywell infiltration system, which would serve to address any potential polluted runoff generated by the Project. However, as stated above, the feasibility of infiltration largely depends on whether the on-site soils have an adequate infiltration rate as determined by a percolation test performed by a licensed Geotechnical engineer. If infiltration is determined to be infeasible, the Project would consider biofiltration such as a Modular Wetland system as an alternative method of LID treatment. As such, the Project would not conflict with or obstruct any water quality control plans for the Ballona Creek Watershed. No other water quality control plans or sustainable groundwater management plans would be affected by development of the Project. *Impacts would be less than significant.*

<u>Conclusion:</u> Based on the Water Resources Memorandum, the Project would result in a less than significant water quality impact. For additional details, refer to the Water Resources Memorandum provided as Attachment E of this memorandum.

<u>Conclusion for Criterion (d)</u>

As the Project would result in a less than significant impacts with respect to traffic, noise, air quality, and water quality, the Project would meet this criterion.

Criterion (e): The site can be adequately served by all required utilities and public services.

<u>Utilities</u>

The Project would be located on an urban infill site currently developed with an office building in a highly developed urban area that is well served by existing public utilities and services. Southern California Edison (SCE) and the Los Angeles Department of Water and Power (LADWP) would provide electricity to the Project Site, and the Culver City Department of Public Works would provide solid waste collection and sewer services. According to the 100 Corporate Pointe Utilities Technical Memo prepared by PSOMAS on March 11, 2025 (provided as Attachment G of this memorandum) the Project's impacts on wastewater infrastructure would be less than significant. Golden State Water Company (GSWC) would provide water services to the Project Site via Metropolitan Water District as stated in the will serve letter from GSWC (provided in Attachment G of this memorandum). SoCal gas provides natural gas services to the City of Culver City and would serve the Project, if necessary. According to the Utilities Technical Memorandum, the utilities serving the Project can adequately serve the project. *Impacts would be less than significant.*

Public Services

Fire Protection

Fire protection and emergency medical services for the Project Site are provided by the CCFD, which is supported, as required, by the fire departments of the cities of Los Angeles, Santa Monica, and Beverly Hills, and by the Los Angeles County Fire Department, through mutual aid agreements. As the Project Site is located in an urbanized area within the City of Culver City, it is well served by CCFD. The Project Site is located within Fire District 3 and Fire Management Zone 14. The closest fire station to the Project Site is Fire Station 3, located at 6030 Bristol Parkway, approximately 0.3 miles southwest of the Project Site. The proposed residential and commercial building would comply with fire protection design standards, as necessary, per the California Building Code, California Fire Code, the CCMC, and the CCFD, to ensure adequate fire protection. Culver City's standard conditions of approval generally require that plans for building construction, fire flow requirements, fire protection devices (e.g., sprinklers and alarms), fire hydrants and spacing, and fire access, including ingress/egress, turning radii, driveway width, and grading, would be prepared for review and approval by the CCFD. With compliance with the California Building Code, California Fire Code, and the CCMC, pursuant to associated reviews and approvals by the CCFD, and its close proximity to Fire Station 3, the Project would have adequate fire protection services. *Impacts would be less than significant.*

Police Protection

Police protection for the Project Site is provided by the Culver City Police Department (CCPD). As the Project Site includes uses that are currently served by CCPD and is located in an urbanized area within the City of Culver City, it is well served by CCPD. Furthermore, the nearest CCPD station is located in close proximity at 4040 Duquesne Avenue, approximately 2.2 miles north of the Project Site. The Project would incorporate a security program to ensure the safety of Project residents, employees, and visitors. During construction of the Project, the Project Site would be fenced and gated and it will be monitored by 24-hour surveillance cameras with online access by site personnel to monitor the site during off hours. Entry to the construction site will be controlled and will be limited to approved personnel and equipment, and the site will be secure after hours. During Project operation, site security would also include the provision of 24-hour video surveillance. Security cameras would be located to capture views at the perimeter of the proposed buildings; at main pedestrian and vehicular entries; at other outdoor locations as appropriate; and at stair/elevator lobbies. Access to retail uses and publicly accessible open space areas would be unrestricted during business hours, but facility operations would include staff training and building access/design to assist in crime prevention efforts and to reduce the demand for police protection services. Thus, while the Project would increase the occupancy of the Project Site as compared to existing conditions, the Project's added security measures would reduce the demand for police protection services. In light of the Project's security features and given the existing level of police services on the Project Site and in the local vicinity, the Project would have adequate police protection services. *Impacts would be less than significant.*

Conclusion for Criterion (e)

As the Project would result in less than significant impacts with respect to utilities and public services, the Project would meet this criterion.

Exceptions to Categorical Exemption

CEQA Guidelines Section 15300.2 lists six exceptions to a categorical exemption. These exceptions include the following:

a. Location. Classes 3, 4, 5, 6, and 11 are qualified by consideration of where the project is to be located – a project that is ordinarily insignificant in its impact on the environment may in a particularly sensitive environment be significant. Therefore, these classes are considered to apply in all instances, except where the project may impact on an environmental resource of hazardous or critical concern where designated, precisely mapped, and officially adopted pursuant to law by federal, state, or local agencies.

b. Cumulative Impact. All exemptions for these classes are inapplicable when the cumulative impact of successive projects of the same type in the same place, over time is significant.

c. Significant Effect. A categorical exemption shall not be used for an activity where there is a reasonable possibility that the activity will have a significant effect on the environment due to unusual circumstances.

d. Scenic Highways. A categorical exemption shall not be used for a project which may result in damage to scenic resources, including but not limited to, trees, historic buildings, rock outcroppings, or similar resources, within a highway officially designated as a state scenic highway. This does not apply to improvements which are required as mitigation by an adopted negative declaration or certified EIR.

e. Hazardous Waste Sites. A categorical exemption shall not be used for a project located on a site which is included on any list compiled pursuant to Section 65962.5 of the Government Code.

f. Historical Resources. A categorical exemption shall not be used for a project which may cause a substantial adverse change in the significance of a historical resource.

The analysis below demonstrates that the Project or its circumstances would not result in any exceptions identified in CEQA Guidelines Section 15300.2.

Criterion Section 15300.2(a): Location

Classes 3, 4, 5, 6, and 11 are qualified by consideration of where the project is to be located - a project that is ordinarily insignificant in its impact on the environment may in a particularly sensitive environment be significant. Therefore, these classes are considered to apply in all instances, except where the project may impact on an environmental resource of hazardous or critical concern where designated, precisely mapped, and officially adopted pursuant to law by federal, state, or local agencies.

This exception applies to CEQA exemptions under Classes 3, 4, 5, 6, and 11. This Project qualifies as a Class 32 (Infill Development) Categorical Exemption, and therefore this exception is not applicable. In addition, the Project Site is located in a previously developed urban infill location surrounded by existing urban uses and is not located in a particularly sensitive environment.

Criterion Section 15300.2(b): Cumulative Impact

All exemptions for these classes are inapplicable when the cumulative impact of successive projects of the same type and in the same place, over time is significant.

Under this exception, exemptions for these classes are inapplicable when the cumulative impact of successive projects of the same type in the same place, over time is significant. There is no evidence of a potential significant cumulative impact because successive projects of the same type in the same place have not been approved and are not currently proposed. A total of eight related projects were identified in the Transportation Assessment

(Attachment B of this memorandum). All eight of these Projects are located within the City of Culver City within approximately one mile of the Project Site. The related projects include: 1) the 6201 Bristol Parkway project (a mixed-use office, retail restaurant project located approximately 0.6 miles southwest of the Project Site); 2) the 5700 Hannum Avenue mixed-use project (a mixed use residential and retail building located approximately 0.1 miles south of the Project Site); 3) the 5800 Bristol Parkway / 5801 Hannum Avenue project (office building) located approximately 0.5 miles west of the Project Site); 4) the 5645 Sepulveda Boulevard project (a four-story commercial medical office and retail project located approximately 0.8 miles west of the Project Site); 5) the 5730 Uplander Way project (a multifamily housing project located approximately 0.2 miles southwest of the Project Site); 6) the Entrada Office Tower located at 6161 Centinela Boulevard approximately 1 mile southwest of the Project Site; 7) the 11469 Jefferson Boulevard project (a boutique hotel including a restaurant and outdoor dining located approximately 0.9 miles to the west of the Project Site); and 8) the 5757 Uplander Way project (a mixed use residential building with affordable housing located approximately 0.1 miles southwest of the Project Site). As each of the eight related projects would be required to comply with the same or similar thresholds of significance and regulatory compliance measures as the Project, it is anticipated that the related projects would not individually contribute to a cumulatively considerable impact. The Project's Transportation Assessment did not identify significant cumulative traffic impacts associated with the Project and related projects.

As it relates to noise, Section 6, Cumulative Impacts, of the Noise and Vibration Technical Report (see Attachment C), evaluated cumulative construction and operational noise impacts with the related projects. As evaluated therein, because construction noise would be attenuated prior to reaching land uses proximate to the Project Site and the City imposes a timeframe limit on construction equipment, cumulative noise from cumulative construction projects would not be substantially different than that generated by the Project. Furthermore, overlapping construction would not cause off-site construction traffic noise to surpass applicable noise threshold. As such, the Project would not result in a cumulatively considerable construction noise impact. During Project operations, the Project's traffic combined with related projects would generate noise levels of less than 1.1 dBA along area roadways, which would not exceed the significance thresholds of an increase of 3 dBA CNEL nor be a perceptible change in audible noise levels. Also, noise from stationary equipment is regulated by the City. Compliance with applicable noise regulations by the Project and related projects would ensure operational noise impacts are less than significant.

With regard to cumulative air quality impacts, Section 6, Cumulative Impacts, of the Air Quality Technical Report (see Attachment D), evaluated cumulative air quality impacts. As evaluated therein, construction of the Project would be consistent with the AQMP as the Project would not generate emissions of nonattainment pollutants or precursors (i.e., NO_X) that exceed the applicable significance thresholds. As the Project's maximum regional emissions from construction would not exceed the regional thresholds of significance (Table 7 of the report), the Project would be consistent with the AQMP and cumulative impacts would be less than significant. Operation of the Project would be consistent with the AQMP as the Project would not generate emissions of nonattainment pollutants or precursors (i.e., VOC, $NO_{X,}$ CO, SOx, PM10, and PM2.5) that exceed the applicable significance thresholds (Table 8). Therefore, the Project would result in a less than significant cumulative operational impact.

In addition, the Project-specific construction and operational air quality emissions would not exceed the applicable SCAQMD significance thresholds. Thus, based on SCAQMD methodology, the Project's construction and operational emissions would not represent a considerable contribution to a cumulative impact.

As it relates to water quality impacts with regards to the Project and buildout of the related projects, the Project would improve water quality as it would introduce drainage features and/or water quality measures on a site which currently does not include these features. In addition, related projects would be subject to similar water quality regulatory requirements as the Project. As such, the Project would not result in a significant cumulative water quality impact.

Overall, there is no evidence of significant cumulative impacts from successive projects of the same type in the same place, over time. Therefore, this exception does not apply to the Project.

Criterion Section 15300.2(c): Significant Effect

A categorical exemption shall not be used for an activity where there is a reasonable possibility that the project will have a significant effect on the environment due to unusual circumstances.

This exception applies when there is a reasonable possibility that a project will have a significant effect on the environment due to unusual circumstances. As described above, the Project would consist of 351 residential units, approximately 6,825 sf of commercial space, and 435,524 sf of residential space. The Project would include 524 vehicle parking spaces. Parking would be provided primarily within the six-story parking structure, with 19 commercial spaces and 505 residential spaces. The Project is consistent with the General Plan land use designation and zoning designation, consistent with applicable General Plan Land Use Element objectives and policies for the Fox Hills area of the City of Culver City, is similar in size and scale to other developments in the area, and is not unusual for the location. The Project Site is located in a developed urban neighborhood, and the Project would provide a neighborhood-serving commercial use with convenient access to nearby high-quality public transit options. Based on available facts and reasonable assumptions based on such facts, there are no unusual circumstances for the Project that support a reasonable possibility of a significant effect on the environment. Therefore, this exception does not apply to the Project.

Criterion Section 15300.2(d): Scenic Highway

A categorical exemption shall not be used for a project which may result in damage to scenic resources, including but not limited to, trees, historic buildings, rock outcroppings or similar resources, within a highway officially designated as a state scenic highway. This does not apply to improvements which are required as mitigation by an adopted negative declaration or certified EIR.

This exception applies to a project which may result in damage to scenic resources, including, but not limited to, trees, historic buildings, rock outcroppings, or similar resources, within a highway officially designated as a state scenic highway. Based on a review of the California Scenic Highway Mapping System,[7] the Project Site is not located on or near an officially designated scenic highway. Therefore, the Project would have no impacts on an officially designated scenic highway and this exception does not apply to the Project.

Criterion Section 15300.2(e): Hazardous Waste Sites

A categorical exemption shall not be used for a project located on a site which is included on any list compiled pursuant to Section 65962.5 of the Government Code.

This exception applies to a project located on a site which is included on any list compiled pursuant to Section 65962.5 of the Government Code. Government Code Section 65962.5 refers specifically to a list of hazardous waste facilities compiled by the Department of Toxic Substances Control (DTSC). According to the Phase I

7 For State-designated scenic highway: California Department of Transportation, California State Scenic Highway System Map, https://caltrans.maps.arcgis.com/apps/webappviewer/index.html?id=465dfd3d807c46cc8e8057116f1aacaa. Accessed December 2024.

Environmental Site Assessment Reports (Phase I ESA) prepared for the Project by Tetra Tech (2025) (see Attachment H), a records search of multiple Federal, State, and local environmental databases was provided by Environmental Data Resources (EDR). These searches identified the following listings for the subject site address of 100 Corporate Pointe:

- Sprint Cell Site LA7 and T-Mobile West #LA033 were identified on the Facility Index System (FINDS) database under radiotelephone communications.
- Slauson Investors, LLC was identified on the HWTS and HAZNET databases for disposing of approximately two 55-gallons of waste oil and mixed oil, and oil/water separation sludge. Based on follow-up communication with Sagard and Slauson Investors, the disposal information (from 2014 and 2015) is potentially related to elevator repairs. No violations were reported.
- Corporate Pointe Dental was identified on the Los Angeles Co. HMS database; no additional information was available pertaining to this listing.
- 1x 100 Corporate Point was identified on the HWTS database; no additional information was available pertaining to this listing.

These listings are not considered to be a concern given that the listings do not indicate any releases of hazardous substances on the Project Site, no other pertinent listings exist for the Project Site, and the fact that with the passage of time no additional listings have been made for the Project Site or any adjacent sites. In addition, the Project Site has not been included on the DTSC's hazardous waste facilities list following the date of the Phase I ESA. Thus, the Project Site has not been included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. Therefore, this exception does not apply to the Project.

Criterion Section 15300.2(f): Historical Resources

A categorical exemption shall not be used for a project which may cause a substantial adverse change in the significance of a historical resource.

CEQA Guidelines Section 15300.2 states that a categorical exemption "shall not be used for a project which may cause a substantial adverse change in the significance of a historical resource." A Historic Resources Technical Memorandum prepared by Architectural Resources Group (October 2024) is provided as Attachment I, and an Archaeological Resources Assessment prepared by ESA (April 2025) is provided as Attachment J, which are both summarized below.

Historical Resources

As discussed in the Historic Resources Technical Memorandum (see Attachment I), the Project Site is not individually eligible for listing in the National Register, California Register, or as a Culver City Landmark or Significant Structure. As such, the Project Site does not meet the definition of an historical resource as outlined in CEQA Guidelines Section 15064.5(a)(1) or (2), and the Project would not have a direct impact on historical resources. In addition, the building does not appear to be eligible as a contributor to a potential historic district. Therefore, the Project's impact to historical resources would be less than significant.

Archaeological Resources

As discussed in the Archaeological Resources Assessment (see Attachment J), a cultural resources records search conducted on January 2025 by ESA at the California Historical Resources Information System-South Central Coastal Information Center (CHRIS-SCCIC) indicated that 11 cultural resources studies have been conducted within a 0.50-mile radius of the Project Site. The records search results indicate that one archaeological resource

(CA-LAN-67) has been recorded within the 0.50-mile radius of the Project Site, and five prehistoric archaeological resources (CA-LAN-59, -60, -213, -216, -2768) have been recorded in the immediate vicinity of the 0.50-mile radius of the Project Site. Review of historic maps and aerial photographs indicate that the Project Site was undeveloped until a golf course/country club was constructed at the Project Site by at least 1930 and was later graded or leveled sometime between 1972 and 1980. Based on the lack of previous historic period uses within the Project Site and the fact that no historic-period archaeological resources have been previously recorded within the Project Site or 0.50-mile radius, the potential to encounter historic-period archaeological resources within the Project Site is considered low. However, given the moderate potential to encounter precontact resources, the Project would be subject to following the City's Conditions of Approval (COAs) to ensure the proper treatment of archaeological resources that are inadvertently discovered during construction excavation activities. With adherence to the COAs, impacts to archaeological resources would be less than significant.

Summary/Conclusions

A project qualifies for a Class 32 (Infill Development) Categorical Exemption if it is developed on an infill site and meets the five (5) conditions described in this memorandum. Based on the technical analyses above, and consistent with the attached technical reports, the 100 Corporate Pointe Project meets the criteria for a Class 32 (Infill Development) Categorical Exemption. Furthermore, none of the exceptions to a Class 32 (Infill Development) Categorical Exemption listed in CEQA Guidelines Section 15300.2 apply to the Project, as supported by the technical analyses provided above. Therefore, based on the analyses and findings presented in this technical memorandum and in the attached technical reports, the Project qualifies for a Class 32 (Infill Development) Categorical Exemption and is exempt from further review under CEQA.

Introduction

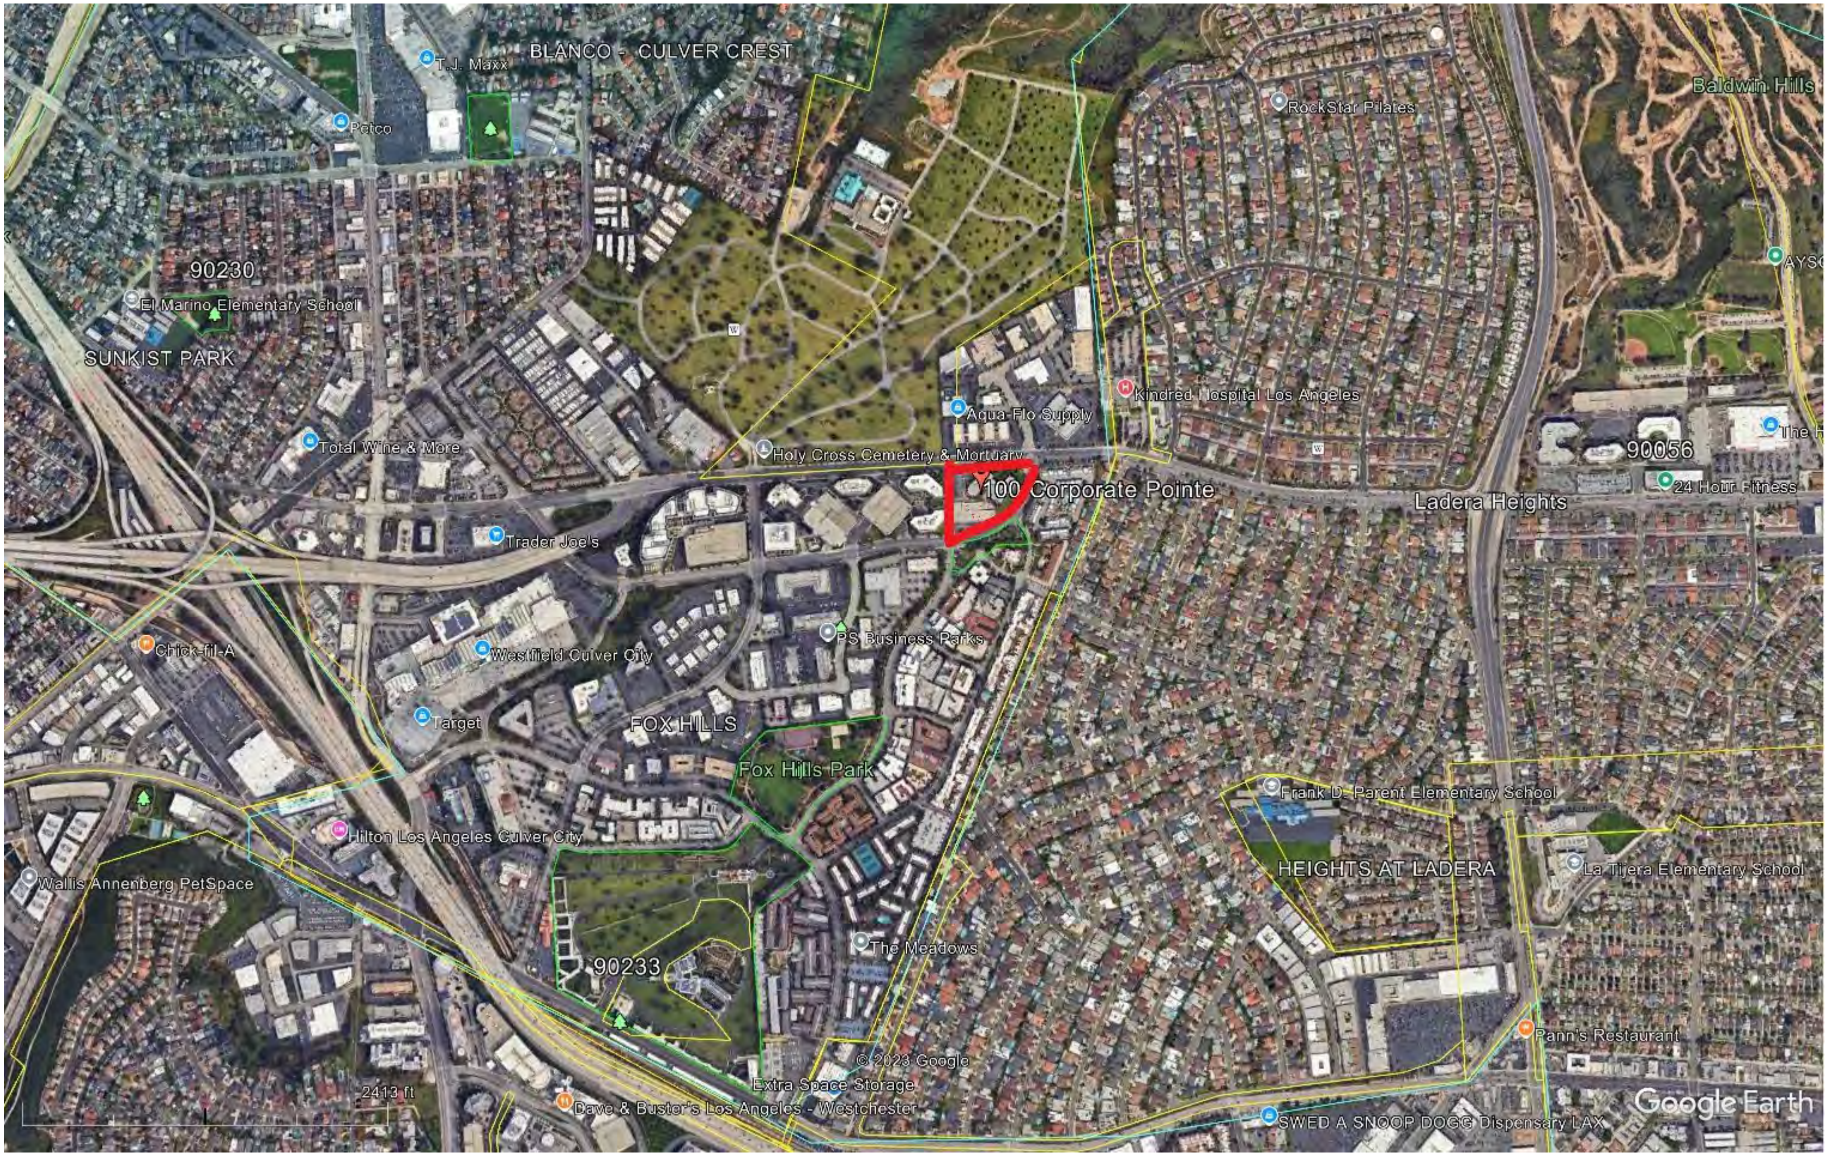
Background

The project site is located in Culver City at the southwest corner of Slauson Avenue and Buckingham Parkway, across the street from the Buckingham Heights Business Park and the Holy Cross Cemetery and Mortuary. The site is approximately 4.5 acres in size. Alliance Residential is planning to demolish the existing buildings and build a five to seven story mixed use and residential complex. The site is presently in use, but at a reduced level. Alliance Residential asked Arborgate Consulting to document the existing trees within the site that may be removed or damaged during construction. The existing trees, but not shrubbery or other plants on this property are included in this study. The existing landscape is still being irrigated and maintained during this process.

Assignment

Arborgate Consulting was asked to provide an inventory and arboricultural evaluation of about 100 trees' health and condition, provide professional opinions and report as appropriate for Culver City. The trees on site and in the parking lots, including the Slauson side and the Buckingham side were measured, and evaluated. Representative trees and conditions have been photographed. No options for preservation are discussed, since the entire site will be razed and cleared, so transplanting is not a reasonable solution, considering the quality of the trees observed.

Location Aerial



Observations

Overview

The site is just east of the end of the Marina Freeway (CA90) on the south side of Slauson Avenue. The site was built out a little more than 40 years ago. The main part of the site contains a parking structure and three-story office building. The property is being maintained and irrigated as usual, but with some reduction of activity within the building and parking structure.

The present tree palette is dominated by 26 carrotwoods, *Cupaniopsis anacardioides*, and 20 sweet gums, *Liquidambar styraciflua*, in the parking lot islands and edges of the surrounding landscape areas. The surrounding Street trees on both streets are fern pines, *Afrocarpus falcatus*. The other trees on site are alders, *Alnus rhombifolia*; Aleppo pines, *Pinus halepensis,* and jacarandas, *Jacaranda mimosifolia*. Other than the alders and Aleppo pines, most are smaller than would be expected after 40 years, having been constrained by the small root space in parking islands and paving cutouts. As would be expected, the sidewalks adjoining the site and the hardscape surrounding these trees have been damaged despite frequent pruning to stunt the size of these trees. Due to years of hard pruning, most of the trees appear sparse, chlorotic and/or unhealthy. The parking lot planting spaces are primarily small 4-foot wide cutouts or end islands with one carrotwood or fern pine in each.

Due to the small size of each planting space, or being planted in turf, the shallow rooted nature of the species, i.e. the sweet gum, carrotwoods and alders, and the compaction of the soil, most of the trees are shallow rooted. Soil conditions may be less than desirable. Some trees are yellowing and/or stunted. There are no rare or endangered species on site. Only the alders are native, but they're not naturally occurring here and would not naturally occur without a nearby stream or river.

Abbreviations in Matrix

The size, species, evaluation of health, structural condition, location, and the description of defects, health and condition of the trees are listed below. Arboricultural terms are defined in the glossary.

Abbreviations used in the following matrix include:

1s = one sided, 1sRF=one-sided root flare
brk = broken limb
Chlor = chlorotic
Cod = codominant branching
Cr = crowded
CrS = crowded scaffold limbs
CrR = crowded roots
Db = dieback
DL = dogleg
DLS = dog-leg scaffolds
DLT = dog-leg trunk
Epi = epicormic shoots
FC = flush cuts
Hd = headed

Inc = included bark
ISHB = invasive shot hole borer
Lt = lion-tailing
noRF = no root flare
OP = over-pruned
mSp = slightly sparse
Sp = sparse
Sh = shallow roots
Sup = suppressed crown class
SW=sidewalk
T = trunk
TO = limb tear out
Topd =topped
Xing = crossing, rubbing limbs

Tree Evaluation Details

In the appendix of this report are four maps that shows the general location of trees referenced above and below, including the fern pine street trees described above.

Aleppo pines, *Pinus halepensis*

The four Aleppo pines are all located south of the parking structure. Their structure is abnormal and not very sound. A more normal structure would be more excurrent. Having several competing main stems prevents the formation of strong branch collars and there is often included bark between these competing stems. The task of pruning is to improve the structure, not just thin them out. These are sparsely foliated mainly due to inadequate root space.

In their native desert climate, they tend to be more excurrent and single trunked. This is a very fast-growing species and as a result they often have nursery induced root defects. It is also a large species. Being planted in turf, they also become shallow-rooted and have weaker wood. This is a good time to replace them, hopefully with more appropriate surrounding plants than turf grass.

Alder, *Alnus rhombifolia*

The thirteen alders are planted in turf or ivy, some in the front lawn and some in back near the entry. This is another fast-growing tree species. Alders are riparian trees that grow along many California streams. Planted in lawns they get the water they need, but more nitrogen than they should have. The combination makes them grow fast, but weak. In response, the past trimming seems to have focused on controlling their growth by heading them back. They are naturally excurrent and should need little pruning.

Being planted in turf made for fast growth, but compromised strength, and also caused shallow-rooting. The combination of turf grass maintenance and shallow roots led to root injury and root decay, even basal decay. Even in better conditions this species seldom live long.

Carrotwood trees, *Cupaniopsis anacardioides.*

Twenty-six of the trees are Carrotwood trees, originally promoted by Sunset Western Garden Book as a good tree to plant by your swimming pool and a good parking lot tree. New communities, like Irvine, jumped on the bandwagon and planted many in small planting spaces without looking at older trees in botanic gardens or older communities. Unfortunately, they are neither clean nor safe near paving. Once they are mature, they drop large amounts of seed and their shallow roots are destructive to paving.

The soils may be the cause of the chlorosis of many carrotwoods. Also, the heavy pruning to keep them from outgrowing their planters could also cause chlorosis, due to related dieback in the roots. Unfortunately, all this pruning did <u>not</u> correct the more serious structural defects in these trees. Crowded scaffold limbs, especially with included bark, are apt to split out or pinch each other out. The branching resulting from the regular heading back is neither strong nor attractive. Their frequent pruning also included some lion-tailing, which causes weak branching as well.

Jacaranda, *Jacaranda mimosifolia*

The eight jacarandas are all crowded together at the main entry. All were headed back severely. All the jacarandas are multi-trunked specimens. The nurseries can make multi-trunked specimens two ways: either by causing a seedling to branch out low into several stems; or to plant several seedlings together. These were grown this latter way. This way can become a problem if the roots of one seedling grow around the base of another. If that happens, the roots will increase in diameter year by year and the base of the other seedling needs to increase year by year, but its being gradually strangled by its neighbor's roots. Also, seeds have various genetics and the three different seedlings probably will develop differently, so that one side or another dominates. Here at the main entry you have four jacarandas planted on each side, crowding each other, and severe pruning causing them to grow in erratic ways.

Sweet gum, Li*quidambar styraciflua*

The twenty sweet gums are planted both in turf and small cutouts. Like Ficus and carrotwoods, sweet gums are shallow-rooted and cause a great deal of paving damage. It is also a large tree, naturally excurrent, and frequently planted for fall color. Excurrent trees need less pruning, but for some reason these have been pruned severely and frequently. Unfortunately, none had kept their central trunk. Either they were allowed to fork and become codominant or they were topped. Their health has suffered as a result, but there was not enough space for them to grow, as it was.

There is a bacterial disease that has been infecting this and several other species of trees. Many sweet gums here appear to be infected. Pruning probably spread it to all or most. Originally it was called Pierce's disease, i.e. *Xylella fastidiosa*. There is no true cure. Trunk injections can keep otherwise healthy trees alive longer.

Measurements

According to arboricultural standards, the trunk diameters were measured at four and a half feet (4.5 feet) above average grade. Diameter measurements were taken using calipers for trees up to eight inches in diameter, and a Biltmore stick for larger calipers.

Suitability for the Proposed Project

All the landscape trees are recommended for removal, given their poor condition and construction plans. Grading and pad preparation for the new buildings will require removal of almost everything on or below the site. The buildings and landscape will be removed, but not the street trees. Every effort will be made to preserve the street trees

Botanic name / Common name Cross-Reference

Botanical name	**Common name**
Alnus rhombifolia	Alder (aka while alder)
Afrocarpus falcatus	Fern pine
Cupaniopsis anacardioides	Carrotwood
Jacaranda mimosifolia	Jacaranda
Liquidambar styraciflua	Sweet gum
Pinus halepensis	Aleppo pine

Discussion

City Street Trees

"The Public Works Director shall have sole authority to cut, trim, prune, replace or remove any tree in or on any parkway in the City. No other person shall cut, trim, prune, replace, remove, deface, or in any manner injure any tree in or on any parkway in the City, except as authorized by the Public Works Director in the case of a private improvement project in accordance with §9.08.215"

Pursuant to the aforementioned code section, the street trees are ultimately under the jurisdiction of the City. However, the developer is working with the Public Works Director to develop a plan regarding the street trees. Their plan is to protect and preserve the existing street trees in place and to widen the existing tree wells to alleviate some of the existing deteriorated sidewalk conditions around the trees.

Hopefully, the City can find a way to preserve them, but removal of the surrounding paving must be done surgically to avoid damage to the roots below, some of which are spreading considerable distances.

After a thorough search, no regulations concerning private trees was found, except for view blockage issues.

Construction Accommodations

Considering the planned development, the trees at the site now are not situated in patterns that are useful in the new project. The alders around the northeast corner are on slopes, in poor condition and too close together, thus cannot and should not be transplanted. There will be many opportunities across the new grounds and around the perimeter to plant replacement trees, and they will be more attractive and complementary to the grounds and structures of the new site. The new development pattern will include areas for a substantial tree canopy, both for aesthetics as well as comfort in the west Los Angeles climate.

No trees will be transplanted. Few have sufficient quality and health to justify the risk and expense. There is no known place to store trees on site during grading and no room to work around them unless the work is done in phases. Preserving these trees by transplanting them is not practical or cost effective, unless it saves a useful tree for a good place on site, which is very unlikely to apply to any of these trees. Transplanted trees lose about 90 percent of their roots and take years to recover, if they ever do. Nursery grown trees come with all their roots still attached. In my experience planting new, young, better suited trees of appropriate species, would provide the better solution. In just a few years newly established trees, appropriately trained and cared for, will be full and useful to the site and to the community.

Soil Conditions and Replacement Trees

Within the scope of this report there is no soil testing included. Top soil is a great asset for any new landscape. However, typical demolition and grading does not preserve it, except possibly where trees are scheduled to remain. Top soil should remain on site and ultimately put on top. It takes decades for subsoils to weather sufficiently to function even nearly as well as the topsoil that is here now. To aid in selection of the new landscape trees the soil should be tested after grading by an agronomic laboratory. If topsoil will be protected and stockpiled, it can be tested now. If not, it should be tested after grading and the tree list amended as needed based on the soil test results.

There may be a large number of trees removed, but hopefully not taken to the land fill. Organic matter in or on the soil helps buffer salts, returns most elements to the ground for use by the new trees, and is a basis of a healthy soil biological web that helps protect and feed the new trees. If the existing trees and tree debris can be fed through a large tub-grinder, this resource can be composted, save dump fees, and help the new landscape trees and shrubs as a surface mulch.

Recommendations

Specific Recommendations

1. Do not try to preserve any of the site trees, only protect and preserve the street trees. The site trees have fulfilled their useful life span and are in decline.
2. Rip and remove the roots from the formerly treed areas.
3. Tub-grind existing trees and tree debris. Stockpile and turn the piles to compost the mulch to kill off possible disease, insects and weeds. Apply mulch 3-4” deep to the soil surface below new trees. Where possible mulch should cover the entire planted area, except in planted ground cover spaces.
4. Stockpile top soil where possible, if the grade will be changed.
5. Preserve the existing street trees in coordination with the City.

Photographic Documentation

#1 Sweet gum is in a narrow parking island. Note missing top.

#2 to 6 Sweet gums (right to left)

#10 Aleppo pine – note three main trunks.

Root damage from the pine.

#11 Fern pine Note excessive lower limb removal and codominant trunk. #18 Fern pine is one-sided

#14 Aleppo pine – note five or more "trunks"

#19 & 20 Sweet gums in small island planters.

#18 Fern pine

#21 Fern pine Note excessive lower limb removal and codominant trunk

#21 lifting the sidewalk.

#24 Fern pine – note large surface root along the curb.

Fern pine street trees along Buckingham are either in small cutouts or a narrow parkway

#25 Fern pine has a basal trunk injury.

#26 Fern pine and others are maturing and producing more seed.

#32 Alder is codominant, leaning, and topped.

Roots tend to be shallow in turf conditions.

#33 Alder is also codominant, with included bark, topped and has basal decay.

#33 Alder – note basal decay.

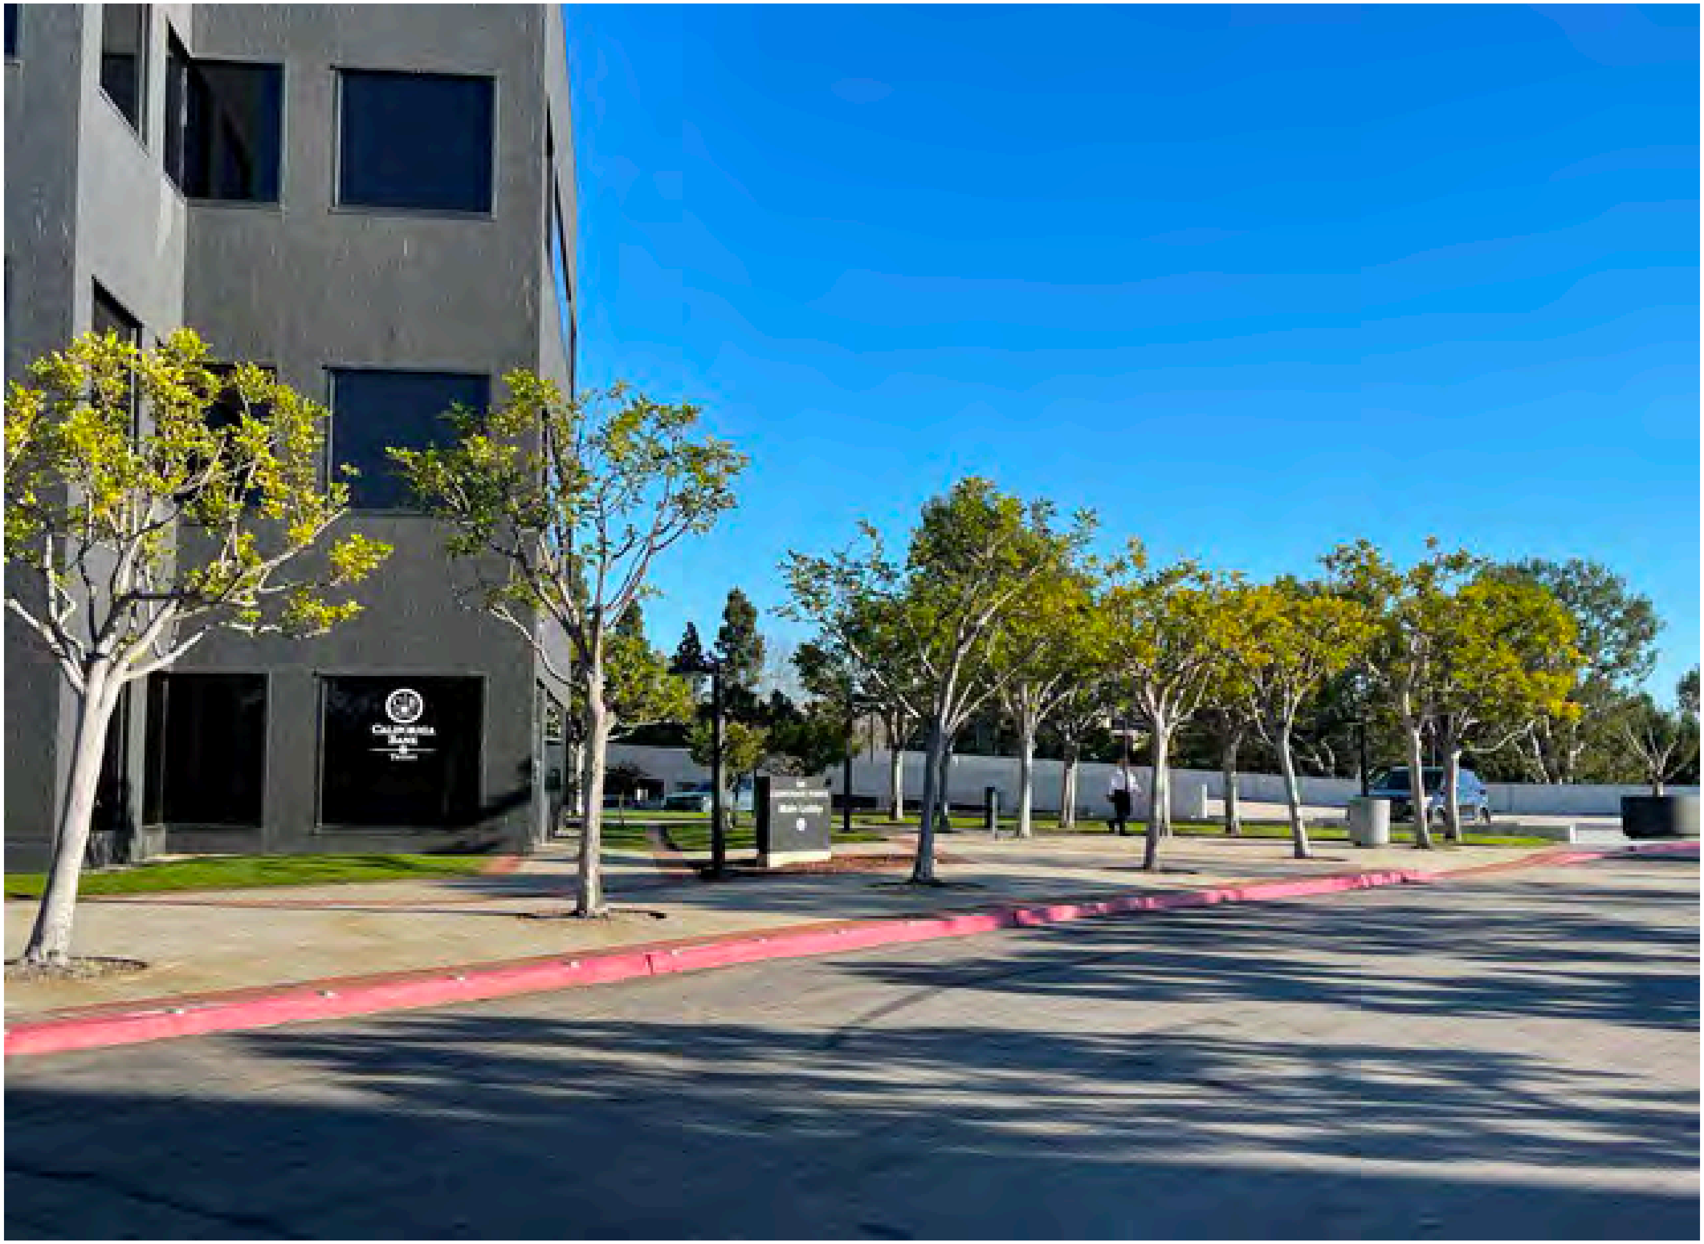
#35 Alder – note shallow roots getting damaged by lawn maintenance.

Fern pines #39 to 43 are all in small sidewalk cutouts.

#46 to 51 – note all were topped

#56 Carrotwood has crowded limbs and sunscald or a canker disease.

#56 to 59 carrotwoods in turf conditions, all with crowded limbs, lion-tailing, and weed whip damage. Note chlorosis on the left ones.



Carrotwoods #77 to 85 in small cutouts, all with crowded limbs, lion-tailing, and weed whip damage. Note chlorosis on most of them.

Sweet gums #61 to 63. Note crowded root condtions.

#76 & 75 Carrotwoods - #76 is off-site, note its dieback. #75 is in a tiny cutout, healthier, but sparse.

Fern pines #66 to 72. Large growing trees with little root space require a lot of maintenance.

Carrot woods #84 to 93 also require a great deal of maintenance to make them so attractive or small.

Carrotwoods #89 to 91 are in turf – note same structural problems and the damage to the lower trunks.

Carrotwoods #92 & 93 are also in turf – note same structural problems and the damage to the lower trunks, but here with chlorosis.

Jacarandas #94 to 97. #96 is root-sprung, stunted and hard to see in the background. All have been topped or headed.

Jacarandas #98, 99 and 101.

Jacaranda #100 is stunted by small root space and “pruning”

#103 – 106 Alders, note heading and topping.

Disclaimer

Since Arborgate Consulting may not have direct review or supervision of demolition or construction as it takes place, we must remind you that there are certain risks involved. Trees are living, dynamic organisms that respond to changes in their environment, sometimes quickly and sometimes slowly. Working around trees in this condition will be risky.

Good, current information on tree preservation has been applied. A complete risk assessment was not requested or performed. Weather, winds and the magnitude and direction of storms are not predictable and a failure may still occur despite the best application of high professional standards. Future maintenance will also affect the trees' health and stability and is not under the supervision or scrutiny of this consultant. This consultant does not assume liability for any tree failures involved with this property.

GREGORY W. APPLEGATE, ASCA

Registered Consulting Arborist #365

PROFESSIONAL REGISTRATIONS:

American Society of Consulting Arborists Registered Consulting Arborist #365
American Society of Landscape Architects, emeritus member
International Society of Arboriculture, Certified Arborist Number WE-0180a
American Society of Consulting Arborists – Tree & Plant Appraisal Qualified
International Society of Arboriculture, Tree Risk Assessment Qualified

EXPERIENCE:

Mr. Applegate is an independent consulting arborist. He has been in the horticulture field since 1963, providing professional arboricultural consulting since 1984 within both private and public sectors. His expertise includes appraisal, tree preservation, diagnosis of tree growth problems, construction impact mitigation, environmental assessment, expert witness testimony, hazard evaluation, pruning programs, species selection and tree health monitoring.

Mr. Applegate has consulted for insurance companies, major developers, theme parks, homeowners, homeowners' associations, landscape architects, landscape contractors, property managers, attorneys and governmental bodies.

Notable projects on which he has consulted are: Disneyland, Disneyland Hotel, DisneySeas-Tokyo, Disney's Wild Animal Kingdom, the New Tomorrowland, Disney's California Adventure, Disney Hong Kong project, Knott's Berry Farm, J. Paul Getty Museums, Tustin Ranch, Newport Coast, Crystal Court, Newport Fashion Island Palms, Bixby Ranch Country Club, Playa Vista, Laguna Canyon Road and Myford Road for The Irvine Company, MTA Expo and Purple Lines, MWD-California Lakes, Paseo Westpark Palms, Loyola-Marymount campus, Cal Tech, Cal State Long Beach, Pierce College, The Irvine Concourse, UCI, USC, UCLA, LA City College, LA Trade Tech, Riverside City College, Crafton Hills College, MTA projects, and the State of California review of the Landscape Architecture License exam (re: plant materials)

EDUCATION:

Bachelor of Science in Landscape Architecture, California State Polytechnic University, Pomona 1973
ASCA Arboricultural Consulting Academy, Arbor-Day Farm, Kansas City 1995, #3 graduate
Continuing Education Courses in Arboriculture required to maintain Certified Arborist status and for ASCA membership

PROFESSIONAL AFFILIATIONS:

American Society of Consulting Arborists (ASCA), Registered Member
American Society of Landscape Architects (ASLA), Full Member
International Society of Arboriculture (ISA), Regular Member
California Tree Failure Report Program, UC Davis, Participant
Street Tree Seminar (STS), Associate Member

COMMUNITY AFFILIATIONS:

Landscape Arch. License Exam prep, Instructor, Cal Poly Pomona	(1986-90)
American Institute of Landscape Architects, LA Chapter Board of Directors	(1980-82)
California Landscape Architect Student Scholarship Fund-Chairman	(1985)
International Society of Arboriculture-Examiner-tree worker certification	(1990)
ASCA, Industry definitions committee and A3G committee	2009-2010
ASCA web site, west coast tree question responder	(2007 and continuing)
Guest lecturer at UCLA, Cal Poly, Saddleback College, & Palomar Junior College	

B. Glossary

ANSI-A300 American National Standards Institute performance standards for the care and maintenance of trees, shrubs and other woody plants. Copies are available from International Society of Arboriculture bookstore 888-ISA-TREE

ANSI-Z60-1 American National Standards Institute standards sizing and describing trees, shrubs and other nursery stock.

Appraisal Plant appraisal - The act or process of developing an opinion of a defined value or defined cost. This may apply to plants, landscape elements, or services. (per Council of Tree and Landscape Appraisers)

Arboricultural Pertaining to the awareness, care, evaluation, identification, growing, maintenance, management, planting, selection, treatment, understanding, valuation and so forth of trees and other woody plants and their growing environments, particularly in shade and ornamental (non-crop/commodity) settings.

Arboriculture The selection, cultivation, and care of trees, vines, and shrubs.

Arborist A person possessing the technical competence through experience and related training to provide for or supervise the management of trees or other woody plants in a landscape setting.

ASCA The American Society of Consulting Arborists, Inc. a professional society, as described in its by-laws.

Bark Tissue on the outside of the vascular cambium. Bark is usually divided into inner bark - active phloem and aging and dead crushed phloem - and outer bark.

Basal flare Most trees have a rapid increase in diameter as the trunk meets the soil line or root crown. This area is associated with both trunk and root tissue.

Caliper Diameter of a tree trunk. Larger trees are usually measured at 4½ feet (see DBH) Trees with calipers 4 inches and below are measured at 6 inches above grade(ANSI Z60-1-1990) Trees above 4 inches, but still transplantable are measured at 12 inches above grade.

Canopy The live, foliage-bearing part of a tree.

Codominant Leaders equal in size and relative importance, developed from 2 apical buds at the top of a stem. Each codominant stem is an extension of the stem below it. There are no branch collars or trunk collars at the bases of codominant stems.

Compaction (Soil Compaction) The compression of soil, causing a reduction of pore space and an increase in the bulk density of the soil. Tree roots cannot grow in compacted soil.

Crotch The union of two or more branches; the axillary zone between branches.

Crown The upper portions of a tree or shrub, including the main limbs, branches, and twigs.

Crown reduction Reducing the size of the canopy using thinning versus heading cuts. Should not exceed 20 to 25 percent branch removal.

Crown restoration Restoration of natural and/or structurally sound form to a tree which has been previously topped, headed or damaged. (synonym – crown restructure pruning)

Cultivar A unique form or type propagated through selective breeding and maintained for specific purposes and retains those attributes in further propagation. An acronym for "cultivated variety"; cultivars can be naturally occurring plants, but usually have been cultivated with specific desirable characteristics in appearance and/or resilience. Maybe a field selection or a horticultural variety that has originated and persisted under cultivation. Usually enclosed in single quotes after the genus and species names.

DBH Diameter of the trunk, measured at breast height or 54 inches above the average grade. See caliper.

Decay Progressive deterioration of organic tissues, usually caused by fungal or bacterial organisms, resulting in loss of cell structure, strength, and function. In wood, the loss of structural strength.

Decline Progressive reduction of health or vigor of a plant.

Deep ripping Sub-soiling. - Cultivating below normal plow or roto-tiller depth.

Dog-leg crooked or bent like a dog's hind leg.

Epicormic Epi - upon; cormic – stem. Branches that are upon the stem, i.e. sprouting from either dormant buds in the cambial zone, or from buds sprung anew from ray traces. Epicormic shoots are a sign that energy reserves have been lowered.

Excurrent Referring to crowns having a strong central leader.

Foliage The live leaves or needles of the tree; the plant part primarily responsible for photosynthesis.

Flush cut Pruning technique in which both branch and stem tissue are removed, generally considered poor practice

Full skirt Dead fronds retained on palms trunks to near the ground.

Girdling root A root that partially or entirely encircles the trunk and/or buttress roots, which could restrict growth and downward movement of photosynthate and/or water and nutrients up.

Ground cover Plants, usually herbaceous, used to spread, stay low and cover ground. They are usually not suited for foot traffic and do not usually need to be mowed and as such are distinguished from lawns. Any relatively low-growing plant. Can be Herbaceous or Woody.

Hanger a broken or partly broken limb still hung up in the canopy, considered a hazardous condition!

Heading Pruning techniques where the cut is made to a bud, weak lateral branch or stub.

Included bark The pattern of development at branch junctions where bark is turned inward rather than pushed out forming a branch bark ridge. Bark embedded within the crotch between a branch and the trunk or between two or more stems that prevents the formation of a normal branch bark ridge. This often occurs in branches with narrow-angled attachments or branches resulting from the loss of the leader. Such attachments are weak and subject to splitting out.

Lion-tailing The removal of all, or a great deal of, the inner branches and/or watersprouts from the crown of a tree. Lion's Tailing is not an acceptable pruning practice, see ANSI A-300.10.1.7.

Live crown ratio The relative proportion of green crown to overall tree height.

Mature Plant will respond to flower-inducing conditions, in contrast with juvenile.

Mulch Substances spread on top of the ground to conserve water, protect against erosion, retain moisture, and protect the roots of trees from heat, cold or drought. The substances are typically organic, such as compost, manure or bark chips.

Narrow crotch for eucalyptus a branch angle of less than 15 degrees – for other trees a branch angle less than 30 degrees.

Native A plant that grows naturally in a particular country, state, or region, and is neither introduced through planting, nor naturalized.

Over pruned removal of more than 10 to 30 percent, depending on health, species and time of year – often evidenced by formation of epicormic shoots.

Over-lifted removing more than the lower one third of scaffold limbs.

Percolation The downward movement of water through soil.

Root crown Area at the base of a tree where the roots and stem merge (synonym - root flare)

Root system The portion of the tree containing the root organs, including buttress roots, transport roots, and fine absorbing roots; all underground parts of the tree.

Root zone	The area and volume of soil around the tree in which roots are normally found. May extend to three or more times the branch spread of the tree, or several times the height of the tree.
Root sprung	the roots are compromised by being pulled out of the ground on the side opposite a lean. (USDA Danger Tree pub)
Scaffold limb	Primary structural branch of the crown.
Species	Taxonomic classification below genus.. 1. A group of plants with common characteristics or consistent differences in morphology, ecology or reproductive behavior, distinct from others of the same genus. 2. The basic unit in plant taxonomy; the Latin binomial consisting of the genus and specific epithet; it is both singular and plural.
Stress	"Stress is a potentially injurious, reversible condition, caused by energy drain, disruption, or blockage, or by life processes operating near the limits for which they were genetically programmed." Alex Shigo
Suppressed	Trees which have been overtopped and whose crown development is restricted from above. They usually occupy the understory and grow slowly.
Topping	Pruning technique to reduce height - heading of large branches.
Wound	Any injury, which induces a compartmentalization response.

Chapter 1
Introduction

This study presents the transportation assessment for the proposed development of a mixed-use project (Project) at 100 Corporate Pointe Walk (Project Site) in the City of Culver City, California (City). The methodology and base assumptions used in the analysis were established in conjunction with the City Public Works Department (CCPWD) Mobility and Traffic Engineering Division.

PROJECT DESCRIPTION

The Project proposes the development of a five- to seven-story mixed-use building with 351 total apartment units, 30 of which are reserved for Low Income households, and 4,742 square feet (sf) of ground floor retail uses. The existing 112,000 sf of office uses would be replaced with development of the Project. Vehicular access to the five-level parking structure on-site would be provided via one Driveway off of a Fire Lane that would connect Slauson Avenue and Buckingham Parkway. Full vehicular access to the Fire Lane would be provided on both Slauson Avenue and Buckingham Parkway. The Driveway would provide full access to the parking structure, which contains both commercial and residential parking spaces and separate building entrances for the commercial and residential uses. Pedestrian access to the Project would be provided at various entrances along all sides of the Project, including along the access lane, along Slauson Avenue, and via courtyard entrances along Buckingham Parkway.

The conceptual Project site plan is illustrated in Figure 1.

Full buildout of the Project is anticipated in Year 2029.

PROJECT LOCATION

As shown in Figure 2, the Project Site is bounded by Slauson Avenue to the north, Buckingham Parkway to the east and south, and commercial uses to the west. The surrounding area is urbanized with a mixture of residential, industrial, and commercial uses.

The Project is located approximately 0.5 miles east of State Route 90 (SR 90), which provides regional transportation between Culver City and Marina del Rey. The Project is also located approximately 0.8 miles east of Interstate 405 (I-405), which provides regional access between the San Fernando Valley and Irvine. The Project Site is primarily served by Slauson Avenue.

Nearby transit service is provided along Hannum Avenue and Slauson Avenue by Culver CityBus, Los Angeles County Metropolitan Transportation Authority (Metro), and Santa Monica Big Blue Bus. Additionally, the Project Site is located approximately 0.7 miles east of the Culver City Transit Center.

STUDY SCOPE

The scope of analysis for this study was developed in consultation with the City and is consistent with *Culver City Transportation Study Criteria and Guidelines* (CCPWD, July 2020) (Guidelines) and in compliance with the California Environmental Quality Act (CEQA) Guidelines (California Code of Regulations, Title 14, Section 15000 and following). The base assumptions and technical methodologies (i.e., trip generation, study locations, analysis methodology) were identified as part of the study approach and were outlined in a Memorandum of Understanding (MOU) that was reviewed and approved by CCPWD in March 2025 and is provided in Appendix A.

ORGANIZATION OF REPORT

This report is divided into six chapters, including this introduction. Chapter 2 describes the transportation network including the existing and future circulation system, traffic volumes, and traffic conditions in the Project area. Chapter 3 provides the Project traffic and trip distribution analyses. Chapter 4 presents the CEQA analysis of transportation impacts. Chapter 5 details the non-CEQA transportation analyses. Chapter 6 summarizes the analyses and study conclusions. The appendices contain supporting documentation, including the signed MOU that outlines the study scope and assumptions and additional details supporting the technical analyses.

Chapter 2
Transportation Network Review

A comprehensive data collection effort was undertaken to develop a detailed description of existing and future conditions in the Project area.

The Existing Conditions analysis includes an assessment of the existing transportation infrastructure and conditions including freeway and street systems, and transit service, as well as pedestrian and bicycle circulation, at the time the MOU was approved in March 2025. Fieldwork (lane configurations, signal phasing, parking restrictions, etc.) for the analyzed intersections was collected in Year 2025.

In addition, this Chapter contains a discussion of the Future Conditions assumptions used to develop the Future without Project Conditions in Year 2029, which corresponds to projected occupancy of the Project, and Cumulative without Project Conditions in Year 2045, which corresponds to the horizon year of the *Culver City General Plan 2045* (City of Culver City, August 2024) (General Plan) update.

STUDY AREA

The Project's transportation analysis Study Area, shown in Figure 3, includes intersections along Slauson Avenue, Green Valley Circle, and Bristol Parkway. This Study Area was established in consultation with CCPWD.

A total of 12 intersections, listed in Table 1, were identified for detailed analysis during the MOU process. The list of Study Intersections was reviewed and approved by the City. The existing lane configurations at the analyzed intersections are provided in Figure 4.

EXISTING TRANSPORTATION CONDITIONS

Existing Street System

The existing street system in the Study Area consists of a regional roadway system including arterials and local streets that provide regional, sub-regional, or local access and circulation within the Study Area. These transportation facilities generally provide two to six travel lanes and left-turn lanes and usually allow parking on one or both sides of the street. Hannum Avenue provides Class II bicycle lanes. Typically, the speed limits range between 25 and 35 miles per hour (mph) on the streets and 55 mph on the freeways.

Street classifications for City roadways are designated in the General Plan. The General Plan defines specific street standards in an effort to effectively link and serve local and regional transportation systems. Per the General Plan, street classifications are defined as follows:

- Freeways are designed to maximize the mobility of vehicles and do not directly serve adjacent land uses. Their primary function is to carry large volumes of traffic at high speed throughout the region.

- Primary Arterials are major cross-town thoroughfares with desired right-of-way (ROW) widths of 95 feet or more. They are highly signalized with priority green time to minimize delay. They include major cross-town thoroughfares serving major activity centers and are corridors with the highest traffic volume and longest trip demands.

- Secondary Arterials provide links between Collectors and Primary Arterials with desired ROW widths of 80 to 94 feet. They serve trips of moderate lengths and smaller geographic areas and provide intra-community continuity. They may carry local bus routes.

- Major Collectors provide access to residential neighborhoods from larger trip generators with desired ROW widths between 60 to 79 feet. They distribute and channel trips between Local Streets and Arterials, usually over a distance greater than 0.75 miles.

- Minor Collectors traverse residential neighborhoods for a short distance and have higher connecting driveway densities, lower speed limits and fewer signalized intersections. They distribute and channel trips between Local Streets and Arterials, usually over less than 0.75 miles, with desired ROW widths less than 60 feet.

- Local Streets provide access for vehicles to travel between private parking and driveways to larger, non-Local Streets. Generally, Local Streets do not exceed 60 feet of ROW widths and are mostly in residential neighborhoods.

Primary regional access to the Project Site is provided by I-405 and SR 90. In proximity to the Project Site, the Study Area is served by arterial streets such as Hannum Avenue, Bristol Parkway and Slauson Avenue. The following is a brief description of the roadways in the Study Area, including their classifications under the Circulation Element:

Freeways

- I-405 – I-405 generally runs in the north-south direction and is located 0.8 miles west of the Project Site. In the vicinity of the Project Site, I-405 provides five travel lanes in each direction. Access to and from I-405 is available via interchanges at SR 90 and La Cienega Boulevard.

- SR 90 – SR 90 generally runs in an east-west direction and is located 0.5 miles west of the Project Site. In the vicinity of the Project Site, SR 90 provides four travel lanes in each direction. Access to and from SR 90 is available via interchanges at Slauson Avenue and Centinela Avenue.

Roadways

- Corporate Pointe Walk – Corporate Pointe Walk is a designated Local Street that provides access to office buildings south of Slauson Avenue and north of Hannum Avenue. Corporate Pointe Walk is not a continuous roadway and is interrupted several times within the Study Area. Adjacent to the Project Site, Corporate Pointe Walk provides one travel lane in the eastbound direction that measures approximately 20 feet wide, with a total paved width of 20 feet.

- Hannum Avenue – Hannum Avenue is a designated Primary Arterial that runs in the east-west direction and is southwest of the Project Site. It provides four travel lanes, two in each direction. On-street parking is generally prohibited within the Study Area. Class II bike lanes are generally provided on both sides of the street. Travel lanes are typically 11 feet wide, and the total paved width is generally 100 feet.

- Slauson Avenue – Slauson Avenue is a designated Primary Arterial that runs in the east-west direction and is located adjacent to the northern boundary of the Project Site. It provides six travel lanes, three in each direction. On-street parking is generally prohibited within the Study Area. Travel lanes are typically 10 feet wide and the total paved width ranges from 80 to 100 feet.

- Bristol Parkway – Bristol Parkway is a designated Major Collector that runs in the north-south direction and is located west of the Project Site. It provides four travel lanes, two in each direction, with a left-turn lane in the middle. On-street parking is generally prohibited within the Study Area. Travel lanes are typically 11 feet wide, and the total paved width ranges from 65 to 80 feet.

- Buckingham Parkway – Buckingham Parkway is a designated Primary Arterial that runs in the north-south direction and is located at the eastern boundary of the Project Site. It provides four travel lanes, two in each direction. Unmetered on-street parking with restrictions is generally provided on both sides of the street south of Hannum Avenue. Travel lanes are typically 12 feet wide and the total paved width is generally 85 feet.

- Fox Hills Drive – Fox Hills Drive is a designated Local Street that runs in the north-south direction and is located southwest of the Project Site. It provides two travel lanes, one in each direction, as well as left-turn lanes at intersections. On-street parking is generally prohibited within the Study Area. Travel lanes are typically 13 feet wide, and the total paved width is generally 40 feet.

- Uplander Way – Uplander Way is a designated Local Street that runs in the north-south direction and is located to the southwest of the Project Site. It provides two travel lanes, one in each direction. Metered on-street parking is generally provided on both sides of the street. The total paved width is generally 60 feet.

- Green Valley Circle – Green Valley Circle is a designated Secondary Arterial that runs in the east-west direction and is located south of the Project Site. It provides four travel lanes, two in each direction, with left-turn lanes. Limited unmetered on-street parking is provided on both sides of the street. Travel lanes are typically 11 feet wide, and the total paved width is generally 85 feet.

- Centinela Avenue – Centinela Avenue is a designated Primary Arterial and Truck Route that runs in the east-west direction and is located south of the Project Site. It provides four travel lanes, two in each direction with left-turn lanes. A Class II bike lane follows both sides of the street from Green Valley Circle to Bristol Parkway, with Class IV bike lanes proposed on the street. Limited unmetered on-street parking is provided on the south side of the street. Travel lanes are typically 10 feet wide, and the total paved width is generally 50 feet.

The existing intersection mobility facilities at the Study Intersections are shown in Figure 5.

Existing Transit System

Figure 6 illustrates the existing public transit service in the Study Area, which is served by bus lines operated by Culver CityBus, Big Blue Bus, and Metro.

Table 2 summarizes the existing transit service operating in the Study Area for each of the service providers in the region, the type of service (peak vs. off-peak, express vs. local), and frequency of service. The average headways during the peak hour were estimated using detailed trip data from Years 2024 and 2025 provided by Culver CityBus, Big Blue Bus, and Metro.

Existing Bicycle System

The City adopted *Culver City Bicycle & Pedestrian Action Plan* (CCPWD, June 2020), which supersedes *Culver City Bicycle and Pedestrian Master Plan* (Alta Planning and Design, November 2010). As shown in *Culver City Bicycle & Pedestrian Action Plan*, the existing bicycle system in the Study Area consists of a variety of bicycle facilities.

Culver City Bicycle & Pedestrian Action Plan is comprised of a network of streets that prioritize bicyclists and provide Class I Shared-Use Paths, Class II Bicycle Lanes, Class III Bicycle Routes and Bike Boulevards, which provide sharrows and signage, and Class IV Separated Bikeways.

Within the Study Area, there are Class II bicycle lanes on Hannum Avenue between Bristol Parkway and Slauson Avenue and on Centinela Avenue west of Green Valley Circle. Bicycle facilities at the study intersections are shown in Figure 5.

Existing Pedestrian Facilities

Per *Culver City Bicycle & Pedestrian Action Plan*, most streets in the City have existing sidewalks in good condition. Marked crosswalks, including traverse lines and continental crosswalks, are provided at most major intersections throughout the City.

The walkability of existing facilities is based on the availability of pedestrian routes necessary to accomplish daily tasks without the use of an automobile. These attributes are quantified by Walk Score and assigned a score out of 100 points. With access to numerous commercial businesses, residences, and cultural centers, the walkability of the Project Site is approximately 63 points[1].

The sidewalks that serve as routes to the Project Site provide proper connectivity and adequate widths for a comfortable and safe pedestrian environment. The sidewalks provide connectivity to pedestrian crossings at signalized intersections within the Study Area. Pedestrian facilities, such

[1] Walk Score (www.walkscore.com) rates the Project Site (100 Corporate Pointe Walk) with a score of 63 of 100 possible points (scores assessed on February 26, 2025). Walk Score calculates the walkability of specific addresses by taking into account the ease of living in the neighborhood with a reduced reliance on automobile travel.

as pedestrian phasing, curb ramps, and crosswalk striping, at the Study Intersections are shown in Figure 5.

Vision Zero

The City adopted the Vision Zero initiative in 2016. Vision Zero is a traffic safety policy that promotes strategies, including modifying the design of streets, to eliminate collisions that result in severe injury or death and increase safety for the most vulnerable road users. Vision Zero has identified the High Injury Network (HIN), a network of streets based on the collision data from *Culver City Bicycle & Pedestrian Action Plan* between Years 2014-2019 where strategic investments would have the biggest impact in reducing death and severe injury. Within the Study Area, Sepulveda Boulevard, Slauson Avenue, Bristol Parkway, Green Valley Circle, and Centinela Avenue are identified as part of the HIN.

Existing Traffic Volumes

Intersection turning movement counts for most intersections were collected in February 2025 on a day when schools were in session. The Existing Conditions (2025) peak hour traffic volumes are shown in Figure 7. The traffic counts are provided in Appendix B.

FUTURE AND CUMULATIVE TRANSPORTATION CONDITIONS

The forecast of Future without Project Conditions (Year 2029) and Cumulative without Project Conditions (Year 2045) was prepared in accordance with procedures outlined in the Guidelines. Specifically, two requirements are provided for developing the cumulative traffic volume forecast: (1) projected future volumes and (2) Related Projects.

The ambient growth factor discussed below likely includes some traffic increases resulting from the Related Projects. Therefore, through some inherent double-counting of vehicles, the traffic analysis provides a highly conservative estimate of Future without Project and Cumulative without Project traffic volumes.

The forecast base year traffic volumes, therefore, include ambient growth, which reflects increases in traffic due to regional growth and development outside the Study Area, as well as traffic generated by ongoing or entitled projects near or within the Study Area.

Ambient Traffic Growth

Existing traffic levels have historically been projected to increase as a result of regional growth and development. To provide a conservative estimate of future background conditions, this analysis used the 1% annual growth precedent as approved in the MOU to simulate anticipated buildout for both Year 2029 and Year 2045 traffic volumes. The total adjustments applied over the four-year and 20-year periods were 4% and 20%, respectively. These growth factors account for increases in traffic due to potential projects not yet proposed and projects located outside the Study Area.

Related Projects

In accordance with the Guidelines, this study also considered the effects of the Project in relation to the Related Projects. Including this analysis step, the potential impact of the Project was evaluated within the context of past, present, and probable future developments capable of producing cumulative impacts. The list of Related Projects is based on information provided by the City and the neighboring City of Los Angeles in early 2025, as well as recent studies of development projects in the area. Related Projects within 0.5 miles of the Project Site were considered in the analysis and represent development projects most likely to add traffic to the Study Intersections. The Related Projects are detailed in Table 3 and their approximate locations are shown in Figure 8.

Though the buildout years of many of these Related Projects are uncertain and may be well beyond the buildout year of the Project, and notwithstanding that some may never be approved or developed, they were all considered as part of this transportation assessment and conservatively assumed to be completed by the Project buildout year of 2029 and General Plan horizon year of 2045. The traffic growth due to the development of Related Projects considered in this analysis is highly conservative and, by itself, substantially overestimates the actual traffic volume growth in the area that would likely occur prior to Project buildout years. With the addition of the 1% per year ambient growth factor previously discussed, the Future without Project Year 2029 and Cumulative without Project Year 2045 Conditions are even more conservative.

Using these conservative assumptions, the potential traffic operations of the Project were evaluated. The development of estimated traffic volumes added to the Study Intersections as a result of Related Projects involves the use of a three-step process: trip generation, trip distribution, and trip assignment.

Trip Generation. Trip generation estimates for the Related Projects were calculated using a combination of previous study findings and the trip generation rates contained in *Trip Generation Manual, 11th Edition* (Institute of Transportation Engineers, 2021) or were provided by the respective jurisdiction. The Related Projects trip generation estimates summarized in Table 3 are conservative in that they do not in every case account for either the trips generated by the existing uses to be removed or the likely use of other travel modes (e.g., transit, bus, bicycling, walking, carpool). Further, they do not account for the internal capture trips within a multi-use development or for the interaction of trips between multiple Related Projects, in which one Related Project serves as the origin for a trip destined for another Related Project.

Trip Distribution. The geographic distribution of the traffic generated by the Related Projects is dependent on several factors. These factors include the type and density of the proposed land uses, the geographic distribution of population from which the employees / residents and potential patrons of the proposed developments are drawn, and the location of these projects in relation to the surrounding street system. These factors were considered along with logical travel routes through the street system to develop a reasonable pattern of trip distribution.

Traffic Assignment. The trip generation estimates for the Related Projects were assigned to the local street system using the trip distribution pattern described above. Figure 9 shows the peak hour traffic volumes associated with these Related Projects at the Study Intersections.

Future without Project Traffic Volumes

The Related Projects volumes were then added to the existing traffic volumes after adjustment for ambient growth through the projected Project completion year of 2029. As discussed above, this is a conservative approach as many of the Related Projects may be reflected in the ambient growth rate. These volumes represent the Future without Project Conditions (i.e., ambient traffic growth and Related Project traffic added to existing traffic volumes) for Year 2029 at the Study Intersections and are shown in Figure 10.

Cumulative without Project Traffic Volumes

Similar to the Future without Project Conditions traffic volumes, the Related Projects volumes were added to the existing traffic volumes after adjustment for ambient growth through the projected General Plan horizon year of 2045. These volumes represent the Cumulative without Project Conditions (Year 2045) at the Study Intersections and are shown in Figure 11.

Future Improvements

The analysis of Future Conditions considered transportation improvements that are funded and expected to be implemented prior to the buildout of the Project. These improvements could result in changes to the physical configuration at the study intersections. Other proposed improvement projects that are not funded and traffic / trip reduction strategies such as Transportation Demand Management (TDM) programs for individual buildings and developments were conservatively omitted from the Future and Cumulative Conditions analyses. A summary of future improvements is provided below.

Bicycle & Pedestrian Action Plan. *Culver City Bicycle & Pedestrian Action Plan* identifies key recommended improvements for corridors throughout the City. The goal of this plan is to improve active forms of transportation by providing accessible, safe, and comfortable environments for all road users. The following summarizes the recommended network upgrades, depicted in Figure 12, planned on corridors within 0.25 miles of the Project Site:

- Recommended Bicycle Facilities: New Class II bikeways on Green Valley Circle and Bristol Parkway, as well as new Class IV bikeways on Sepulveda Boulevard and Centinela Avenue, have been recommended for installation.

- Recommended Pedestrian Facilities: A new beacon/signal has been recommended for installation at Sepulveda Boulevard & Green Valley Circle. New or improved crossings have been recommended at Fox Hills Drive and Green Valley Circle.

- Opportunity Corridors: Three Opportunity Corridors consisting of "planning-level projects" for additional improvements for bicycling and walking include the Downtown Core, Overland Avenue, and Farragut Drive. None of these Opportunity Corridors are located within 0.25 miles of the Project Site.

The specific timeline for implementation of these recommendations has not been identified; therefore, no changes to intersection lane configurations were made as a result of *Culver City Bicycle & Pedestrian Action Plan*.

Better Overland & Safer Fox Hills Project (BOSFHP). The BOSFHP would install a variety of traffic reduction and calming measures to improve traffic flow and safety within the Fox Hills neighborhood. Most of the improvement measures would either not affect any of the Study Intersections or they would not modify lane configurations that would alter the traffic analysis in Chapter 5A. Additionally, they will increase pedestrian and bicycle safety measures to and from the Project.

Notes:
[a] Related Project information provided by the City of Culver City and City of Los Angeles in January 2025. Related Projects include developments within approximately 0.5 miles of the Project Site. Trip Generation estimates developed internally using *Trip Generation Manual, 11th Edition* (Institute of Transportation Engineers, 2021).

Chapter 3
Project Traffic

Trip generation estimates, trip distribution patterns, and trip assignments were prepared for the Project. These components form the basis of the Project's non-CEQA traffic analysis.

PROJECT TRIP GENERATION

The number of vehicle trips expected to be generated by the Project was estimated using rates published in *Trip Generation Manual, 11th Edition*. These rates are based on surveys of similar land uses at sites around the country and are utilized to calculate the number of vehicle trips traveling to and from the Project Site during the morning and afternoon peak hours relative to the size of development.

Conservatively, no trip reductions were applied to account for public transit usage, internal capture, and pass-by trips. The Project is not located within 0.5 miles walking distance of a transit hub.

The number of trips currently generated by the existing office uses to be removed with development of the Project was also estimated using the rates published in *Trip Generation Manual, 11th Edition*. The existing use trip estimates also account for trip reductions consistent with the Project.

As shown in Table 4, after accounting for the adjustments above and the removal of existing uses, the Project is expected to generate -36 net new morning peak hour trips (-118 inbound trips, 82 outbound trips) and -8 net new afternoon peak hour trips (65 inbound trips, -73 outbound trips).

PROJECT TRIP DISTRIBUTION

The geographic distribution of trips generated by the Project is dependent on the location of employment, residential, and commercial centers to and from which employees and patrons of the Project would be drawn, characteristics of the street system serving the Project Site, the location of the Project Driveway, existing traffic patterns, as well as input from CCPWD staff. As detailed in Figures 13A and 13B, the Fire Lane leading to the Driveway would accommodate right-turn in / right-turn-out turning maneuvers from Slauson Avenue, and through and left- and right-turn ingress and egress from Buckingham Parkway.

The intersection-level trip distribution pattern for the residential and retail traffic at the study intersections is shown in Figures 13A and 13B, respectively. Generally, the regional pattern is as follows:

<u>Residential</u>

- 15% to/from the north
- 20% to/from the east
- 25% to/from the south
- 40% to/from the west

<u>Retail</u>

- 25% to/from the north
- 25% to/from the east
- 25% to/from the south
- 25% to/from the west

PROJECT TRIP ASSIGNMENT

The Project trip generation estimates summarized in Table 4 and the trip distribution pattern shown in Figures 13A and 13B were used to assign the Project-generated traffic through the study intersections. Figure 14 illustrates the Project-only traffic volumes for the Project at the study intersections during typical weekday morning and afternoon peak hours.

Chapter 4
CEQA Analysis of Transportation Impacts

This chapter presents an analysis of potential CEQA-related transportation impacts. The analysis also discusses the consistency of the Project with adopted City plans and policies and the improvements, if necessary, associated with the results of a vehicle miles traveled (VMT) analysis compliant with State requirements under *State of California Senate Bill 743* (Steinberg, 2013) (SB 743).

METHODOLOGY

SB 743 required the Governor's Office of Planning and Research to change the CEQA Guidelines regarding the analysis of transportation impacts. Under SB 743, the focus of transportation analysis shifted from vehicular delay (level of service [LOS]) to VMT, with the intent of reducing greenhouse gas emissions, creating multimodal networks, and promoting mixed-use developments.

Section 4 of the Guidelines defines the required CEQA methodology of analyzing a project's transportation impacts in accordance with SB 743. Per the Guidelines, the CEQA transportation analysis contains the following thresholds for identifying significant impacts:

- Threshold A: Programs, Plans, Ordinances, and Policies
- Threshold B: VMT – Land Use Projects
- Threshold C: VMT – Transportation Projects
- Threshold D: Geometric Design Hazards

These thresholds were reviewed and analyzed, as detailed in the following Sections 4A-4D.

Section 4A:
Conflicting with Programs, Plans, Ordinances, or Policies Analysis

Threshold A states that a project would result in an impact if it conflicts with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadways, bicycle, and pedestrian facilities.

PROGRAMS, PLANS, ORDINANCES, AND POLICIES

Table 1 of the Guidelines identifies the City programs, plans, ordinances, and policies relevant in determining project consistency. As discussed below, the Project is consistent and does not conflict with the City's adopted programs, plans, ordinances, and policies listed in Table 1 of the Guidelines; therefore, the Project would not result in a significant impact under Threshold 4A. Detailed discussion of the plans, programs, ordinances, or policies related is provided below.

Traffic Code, Chapter 7.05: Motor Vehicle Air Quality Management

Culver City Municipal Code (CCMC) Chapter 7.05 establishes TDM and trip reduction measures to reduce vehicular emissions of new developments in excess of 25,000 sf. The Project is greater than 25,000 sf and would adhere to the TDM requirements of the CCMC, including providing bicycle parking in accordance with the CCMC and improving Project frontages to encourage walking.

Circulation Element

The purpose of the Circulation Element is to effectively link both local and regional transportation systems in order to protect and serve the City's residents and businesses. As specified in Chapter 2, the Circulation Element consists of a series of roadway and bikeway classifications, as well as pedestrian access objectives and policies. The Project does not propose to modify or make any modifications to the street classifications, nor would it preclude the City from making improvements to the transportation network.

Neighborhood Traffic Management Program (NTMP)

The City adopted a series of procedures for the implementation of NTMPs, as defined in its *Neighborhood Traffic Management Program (NTMP) Procedures Manual* (November 22, 2004). The Project is not projected to lead to trip diversion along residential Local Streets, nor is the Project projected to add a substantial amount of automobile traffic to congested Arterial Streets that could potentially cause a shift to residential Local Streets. Therefore, the Project would not be required to propose an NTMP for the surrounding residential neighborhoods. In addition, the Project would not conflict with the BOSFHP or preclude any measures identified therein from being installed.

Gateway Neighborhood Design Guidelines

The City's *Multi-Family Neighborhood Residential Design Guidelines – Gateway Neighborhood* (Adopted March 24, 2010) is intended to encourage new residential projects to be compatible with, maintain the integrity of, and preserve the unique character and best features of the Gateway Neighborhood by promoting desirable design qualities, guiding change in ways that are compatible with the existing neighborhood development pattern, and respecting the diversity and vitality of the neighborhood. The Project is not located within the Gateway Neighborhood and, therefore, *Multi-Family Neighborhood Residential Design Guidelines – Gateway Neighborhood* does not apply to the Project.

Gateway Adjacent Neighborhood Design Guidelines

The City's *Multi-Family Neighborhood Residential Design Guidelines – Gateway Adjacent Neighborhood* (July 13, 2011) is intended to encourage new residential projects to be compatible with, maintain the integrity of, and preserve the unique character and best features of the Gateway Adjacent Neighborhood by promoting desirable design qualities, guiding change in ways that are compatible with the existing neighborhood development pattern, and respecting the diversity and vitality of the neighborhood. The Project is not located within the Gateway Adjacent Neighborhood and, therefore, *Multi-Family Neighborhood Residential Design Guidelines – Gateway Adjacent Neighborhood* does not apply to the Project.

Residential Parkway Guidelines

The City's *Culver City Residential Parkway Guidelines* (2016) informs the general public about parkway regulations and provides guidance on planning, creating, and maintaining a parkway landscape. Property owners are expected to maintain the parkway space adjacent to their properties, with the exception of street trees, which are maintained by the City. Sidewalk access and step-out strips are to be installed and maintained along all residential parkways in the City. The Project is not along a residential parkway. Therefore, *Culver City Residential Parkway Guidelines* does not apply to the Project. Nevertheless, the Project will maintain the surrounding landscaping and sidewalks adjacent to the Project Site.

Upper Culver Crest Hillside Design Standards

Culver Crest: Recommendations for R-1 Neighborhood Hillside Development Standards (John Kaliski Architects, PlaceWorks, and RMA GeoScience, January 4, 2017) specifies a zoning code overlay for the Culver Crest residential community to ensure that the unique planning and development concerns of this hillside neighborhood are addressed. The Project is not located within the Upper Culver Crest community and, therefore, *Culver Crest: Recommendations for R-1 Neighborhood Hillside Development Standards* does not apply to the Project.

Short-Range Transit Plan

Short-Range Transit Plan (Culver CityBus, FY 2019-2020) provides a strategic blueprint designed to maintain a forward-thinking focus on improved mobility services with a continued dedication to customer service and fiscal responsibility. The plan provides an overview of the City's existing mobility services and policies that further improve mobility in the City, such as transit-oriented development and complete streets projects. Further, the plan proposes a variety of measures to improve mobility services, implement physical changes to transit facilities and roadways, and upgrade existing buses with fully electric vehicles. The Project would not conflict with any of the proposed changes in *Short-Range Transit Plan*, and improvements made in the plan would likely enhance transit alternatives for residents and visitors to the site.

Bicycle and Pedestrian Action Plan

Culver City Bicycle & Pedestrian Action Plan seeks to promote a long-term vision for the City that would "ensure comfortable, safe, and attractive places to bike and walk so that these forms of active transportation become first choices for travelling around our city." Adjacent to the Project Site, Hannum Avenue has been identified for bicycle lane improvements within the BOSFHP. However, the Project would not interfere with any improvements proposed as part of *Culver City Bicycle & Pedestrian Action Plan.* Further, the Project would support active modes of transportation by providing bicycle parking and improving the pedestrian facilities adjacent to the Project frontage.

Complete Streets Policy

The City's *City of Culver City Complete Streets Policy* (Adopted January 13, 2020) intends to "promote healthy and sustainable mobility for Culver City residents and visitors by providing safe, convenient, and comfortable access to destinations throughout the City by walking, bicycling, transit, and autos." The policy sets a variety of goals and standards in the application of complete streets principles including improving mobility for all road users, enhancing safety, and creating a standard set of criteria applicable to all city departments and private developers who construct within the public ROW. The Project would incorporate the complete streets principles into the Project design to encourage multi-modal transportation options within the community.

Local Road Safety Plan

The City's *Local Roadway Safety Plan* (November 2021) (LRSP) is a document that enables the City to determine potential traffic safety projects on roadways and intersections within the City. In an effort to eliminate fatal and severe injury collisions, the document provides a comprehensive collisions analysis through the LRSP to identify high-risk corridors and intersections with the highest collision frequency and severity. Of the several high-risk intersections and street segments identified in the plan, one is located near the Project Site (the intersection of Slauson Avenue & Buckingham Parkway). However, the Project's Driveway will not significantly alter the traffic flow around the Project Site. The southern end of the Driveway will connect to the existing access point at Buckingham Parkway & Hannum Avenue, and the northern end of the Driveway will require only a slight reconfiguration of the existing ingress point on Slauson Avenue. Additionally, the existing egress driveway that is closer to Slauson Avenue & Buckingham Parkway will be eliminated, which should reduce conflicts near the intersection. Thus, the Project would not preclude the City from implementing improvements to eliminate fatal and severe injury collisions as part of the LRSP.

Vision Zero

The City adopted the Vision Zero initiative in 2016 and has incorporated policies and infrastructure improvements into *Culver City Bicycle & Pedestrian Action Plan*.

The Project Site is located adjacent to Slauson Avenue, which is identified in the City's HIN. Nevertheless, the Project would not preclude any Vision Zero improvements on this corridor as it is not proposed to be modified by the Project. Thus, the Project does not conflict with Vision Zero.

Section 4B:
VMT Analysis – Land Use Projects

Threshold B of the Guidelines analyzes whether a project causes substantial VMT and is generally applied to land use projects. Specifically, Threshold 4B inquires whether a project would conflict with or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)(1), which states that (for land use projects) "vehicle miles travelled exceeding an applicable threshold of significance may indicate a significant impact." This subdivision also states that a lead agency has discretion to choose the most appropriate method to evaluate a project's VMT.

Per the Guidelines, a "no impact" determination can be made for a project if any of the following screening criteria are met:

1. *Small projects that result in less than 250 daily or 25 peak hour trips*

   The Project does not meet this criterion because, as shown in Table 5, the Project will have more than 250 daily trips.

2. *Projects within 0.50 miles from these transit hubs: Metro E (Expo) Line Culver City Station, Metro E (Expo) Line La Cienega Station, Westfield-Culver City Transit Center or Sepulveda/Venice Boulevard intersection may be screened*

   The Project does not meet this criterion because, as shown in Attachment C, the Project is more than 0.5 miles from the named transit hubs.

3. *Projects located within any Transit Priority Area where at least 15% of the on-site residential units are affordable*

   The Project does not meet this criterion because less than 10% of the units are designated affordable.

4. *Affordable housing projects where 100% of the dwelling units are affordable*

   The Project does not meet this criterion because less than 100% of the dwelling units are designated affordable.

5. *Local serving retail projects having less than 50,000 sf in size at a single store*

   The Project does meet this criterion because it would provide 4,742 sf of total retail space.

Though one of the screening criterion is met, that criterion only applies to the commercial portion of the Project and the residential portion does not meet ant of the screening requirements. Therefore, further VMT analysis was conducted per the Guidelines, as discussed in the following section.

VMT METHODOLOGY

The following details the methodology for calculating vehicle trips and VMT in *Culver City VMT Tool* (October 2021) (VMT Calculator), as detailed in the Guidelines. The VMT Calculator estimates the project-specific daily number of trips as well as the daily household VMT per capita and daily work VMT per employee for developments within City limits.

As noted in Section 4B of the Guidelines, small-scale retail/restaurant components less than 50,000 sf of larger mixed-use development projects are not considered for the purposes of identifying significant work VMT per employee impacts, as those trips are assumed to be local serving and would have a negligible effect on VMT.

Table 2 of the Guidelines, as presented below, shows the VMT thresholds by type of land use. Note that the table was modified to include the current threshold values for the City.

Use	Metric	Threshold	Threshold Value
Residential	Daily home-based daily VMT/capita	15% below existing levels (Existing level = 8.3)	7.1
Work	Daily home-based-work VMT/employee	15% below existing levels (Existing level = 10.1)	8.6
Regional Retail	Total VMT	Any net positive change in citywide VMT	N/A

Source: Guidelines

The Project consists of residential and neighborhood serving retail uses under 50,000 sf in size.

TDM Measures

Additionally, the VMT Calculator measures the reduction in VMT resulting from a project's incorporation of TDM strategies. The following four categories of TDM strategies are included in the VMT Calculator:

1. Parking
2. Transit
3. Commute Trip Reductions
4. Site Design

TDM strategies within each of these categories have been empirically demonstrated to reduce trip-making or mode choice in such a way as to reduce VMT, as documented in *Quantifying Greenhouse Gas Mitigation Measures* (California Air Pollution Control Officers Association, 2010).

PROJECT VMT ANALYSIS

The latest VMT Calculator was used to conduct the VMT screening evaluation. Based on guidance from the City, the VMT Calculator was modeled for the Project's land uses and density as the primary input. A summary of the results is provided in Table 5 and the detailed screening output from the VMT Calculator is provided in Appendix C.

As shown in Appendix C, the Project does not meet the screening criteria as identified in the Guidelines. Thus, further VMT analysis was required to determine if the Project would have a significant impact.

The VMT Calculator utilized the Project's land uses and their respective sizes, including 321 multi-family units, 30 affordable units, and 4,742 sf of retail. Because the retail use is less than 50,000 sf, no further analysis was required for the retail component as it is neighborhood serving.

Not accounting for any project design features or mitigations, the Project would result in a household VMT of 6.8 per capita, which is below the citywide household VMT threshold of 8.3 per capita, as shown in Table 5. Thus, the Project does not result in a significant VMT impact, and no further mitigation would be required.

Nonetheless, as previously detailed, the Project would implement strategies and action plans as part of a comprehensive TDM program in compliance with the requirements set forth in CCMC Section 07.05.015 to reduce single occupancy vehicle trips while promoting the use of alternative transportation modes, thereby reducing Project VMT.

TABLE 5
VMT ANALYSIS SUMMARY

Project Information	
Address	100 Corporate Pointe Walk
Project Parcel Number	4134020023 & 4134020020
Project Land Uses	
Multi-Family Housing	321 units
Affordable Housing (Family)	30 units
Retail	4,742 square feet
Project VMT Analysis [a]	
Daily Vehicle Trips	1,514
Daily VMT	11,207
Household VMT per Capita	6.8
Impact Threshold	8.3
Significant Impact	**NO**

Notes:
[a] Project Analysis is from VMT Calculator output reports provided in Appendix C.

Section 4C:
VMT Analysis – Transportation Projects

The intent of Threshold C is to assess whether a transportation project would induce substantial VMT by increasing vehicular capacity on the roadway network, such as the addition of through traffic lanes on existing or new highways, including general purpose lanes, high-occupancy vehicle lanes, peak period lanes, auxiliary lanes, and lanes through grade-separated interchanges.

The Project is not a transportation project that would induce automobile travel. Therefore, the Project would not result in a significant impact under Threshold C and further evaluation is not required.

Section 4D:
Geometric Design Hazards Analysis

DRIVEWAY DESIGN FEATURES

Full vehicular access to the Project Site would be provided via one Driveway providing commercial, guest, and residential access to the Project from a Fire Lane along the western boundary of the property. The parking garage is intended to serve tenants and retail visitors and would span five levels.

Retail loading will be accessed from the Fire Lane along the western side of the property. With the square footage of nonresidential uses in the project, a 12-foot x 40-foot loading area with 14-foot headroom clearance will be required. Trucks will access the loading area by traveling south to north from the Hannum Avenue & Buckingham Parkway intersection and pulling over into this loading zone. They will then exit to the north, exiting onto Slauson Avenue. Materials will be transported directly from the loading area and through a corridor to the retail spaces.

Pedestrian access to the Project would be provided via various entrances along all sides of the Project, including through the parking garage, through the retail space or lobby, through courtyards on the eastern side of the Project Site, and via a door along Slauson Avenue. Pedestrian sidewalks will be provided along the Project's frontage on Slauson Avenue and Buckingham Parkway. Along the western boundary within the Fire Lane, a pedestrian entry staircase would provide access to a designed rideshare drop-off/pick-up zone and a bumpout adjacent to the Driveway would provide pedestrian protection.

The section of Slauson Avenue intersecting the Fire Lane provides six travel lanes, three each in the eastbound and westbound directions, with a center median. The existing Corporate Pointe Walk roadway will be replaced by the Fire Lane, providing no change to Slauson Avenue to accommodate the Fire Lane. The Project would reduce the number of curb cuts along Slauson Avenue near Corporate Pointe Walk from two to one.

The section of Hannum Avenue intersecting the Fire Lane is a signalized intersection between Hannum Avenue/Buckingham Parkway eastbound/westbound & Buckingham Parkway northbound. The intersection is signalized, with four-way pedestrian phasing, protected eastbound and westbound left-turns, and Class II bike lanes traveling in the eastbound and westbound directions. Hannum Avenue/Buckingham Parkway provides four travel lanes, two in each direction, with eastbound and westbound left-turn lanes. The Fire Lane would replace an existing southbound driveway; thus, the existing Hannum Avenue/Buckingham Parkway roadway would not change to accommodate the Fire Lane or Driveway, and development of the Project would maintain the existing bicycle lanes.

To ensure maximum visibility, the Driveway and Fire Lane intersections would meet all of the City's requirements and would provide adequate sight distance for drivers of vehicles entering and leaving the Project Site as well as bicyclists and pedestrians wishing to cross the Driveway. No exceptional horizontal or vertical curvatures exist along this section of roadway that would create sight distance issues for Project traffic utilizing the proposed Driveway.

No unusual or new obstacles are presented in the Project design that would be considered hazardous to motorized vehicles, non-motorized vehicles, or pedestrians. Access to the Project would be consolidated to one Driveway in order to minimize potential hazards to pedestrians, bicyclists, and motorists along Buckingham Parkway and Hannum Avenue.

All driveways will be subject to review by the City.

Pedestrian, Bicycle, and Transit Activity

Adequate sight distance would be provided at the Project Driveway to ensure safety for all road users, including pedestrians and bicyclists.

Minimal pedestrian and bicycle traffic was observed to travel on Slauson Avenue and Hannum Avenue adjacent to the Project Site. Based on the trip generation estimates detailed in Table 4, the Project would generate fewer than two vehicles per minute at either Fire Lane intersection. Thus, pedestrians and bicyclists would have adequate gaps in vehicular traffic at the Driveways to safely cross and the Project is unlikely to result in an increase in vehicle-pedestrian and vehicle-bicycle conflicts.

Metro Line 108 and Culver CityBus Line 3 have a bus stop located adjacent to the eastern boundary of the Project Site along Buckingham Parkway. Additionally, Culver CityBus Line 3 has a bus stop located within 0.1 miles of the southern boundary of the Project Site along Hannum Avenue. No modifications are proposed to these bus stops, which would remain with completion of the Project. The Fire Lane Driveways would not conflict with these bus stop operations, and adequate sight distance would be provided to ensure visibility between buses and vehicles at the Driveway. Therefore, the Project would not affect transit activity or access.

The Project Driveway would be designed to remain clear of hardscapes, vegetation, or signage that would impede sight lines.

Physical Terrain

The Project Site is located on a parcel with a slight change in vertical elevation; however, no line-of-sight issues would be caused by changes in elevation and drivers would be able to safely identify approaching vehicles, pedestrians, and bicycles at both Driveways. The Fire Lane intersections with Slauson Avenue and Hannum Avenue are designed to intersect the public ROW at right angles to the extent possible, with adequate building setback to allow pedestrians and bicyclists to observe vehicles within either Driveway.

Incompatible Uses

The Project is compatible with the surrounding area. There are similar commercial uses to the west and north and similar residential uses to the east and south. As such, the Project will not be introducing a new use to the area that would be considered incompatible such that it would create traffic hazards.

Summary

Based on the site plan review and design, the Project does not present any geometric design features that would substantially increase hazards related to traffic movement, mobility, or pedestrian accessibility and, thus, Project impacts are considered less than significant.

Chapter 5

Supplemental Transportation Analysis

This chapter summarizes the supplemental transportation analysis of the Project, including Project traffic, access, safety, and circulation, as well as the Project's effect on nearby pedestrian, bicycle, and transit facilities. This chapter also summarizes the evaluation of the Project's operational conditions, parking supply and requirements, and potential effects due to Project construction.

Section 5 of the Guidelines identifies the following supplemental transportation analyses for reviewing potential transportation deficiencies that may result from a development project:

- Traffic Operations
- Transit Operations
- Driveways
- Parking
- Curb Space Allocation
- Safety Analysis

The supplemental transportation analyses were reviewed in detail in Sections 5A-5F. In addition, a review of the construction activities of the Project is provided in Section 5G.

Section 5A
Traffic Operations

This section assesses the ability of the circulation system to accommodate the addition of vehicular traffic generated by the Project and Related Projects.

OPERATIONAL ANALYSIS METHODOLOGY

Intersection peak hour operations were evaluated for typical weekday morning (7:00 AM to 9:00 AM) and afternoon (4:00 PM to 7:00 PM) peak periods. A total of 12 intersections in the vicinity of the Project Site were selected for detailed transportation analysis and are shown in Figure 3.

The following traffic conditions were developed and analyzed as part of this study:

- Existing with Project Conditions (Year 2025): This analysis condition projects the potential intersection operating conditions that could be expected if the Project were built under Existing Conditions.
- Future with Project Conditions (Year 2029): This analysis condition projects the potential intersection operating conditions that could be expected if the Project were occupied in the projected buildout year. In this analysis, the Project-generated traffic is added to Future without Project Conditions in Year 2028.
- Cumulative with Project Conditions (Year 2045): This analysis condition projects the potential intersection operating conditions that could be expected if the Project were occupied in the horizon year of the General Plan. In this analysis, the Project-generated traffic is added to Cumulative without Project Conditions in Year 2045.

Operational Evaluation

In accordance with the Guidelines, the intersection delay and queue analyses for the operational evaluation were conducted using the *Highway Capacity Manual, 6th Edition* (Transportation Research Board, 2016) (HCM) methodology, which was implemented using Synchro software and signal timing worksheets from the agency of jurisdiction to analyze intersection operating conditions. The HCM signalized methodology calculates the average delay, in seconds, for each vehicle passing through the intersections, while the HCM unsignalized two-way stop-control methodology calculates the control delay, in seconds, for individual approaches of an intersection. Table 6 presents a description of the LOS categories, which range from excellent, nearly free-flow traffic at LOS A, to stop-and-go conditions at LOS F, for signalized and unsignalized intersections.

LOS and queuing worksheets for each scenario are provided in Appendix D.

LOS ANALYSIS

The intersection analysis was conducted based on the HCM methodologies to identify delay and LOS at each of the study intersections with development of the Project. Detailed LOS calculation worksheets are provided in Appendix D.

Existing with Project Conditions

Traffic Volumes. The Project-only morning and afternoon peak hour traffic volumes, described in Chapter 3 and shown in Figure 14, were added to the existing morning and afternoon peak hour traffic volumes shown in Figure 7. The resulting volumes are illustrated in Figure 15 and represent Existing with Project Conditions, assuming Project operation under Existing Conditions.

Intersection LOS. Table 7 summarizes the weekday morning and afternoon peak hour LOS results for each of the study intersections under Existing and Existing with Project Conditions. As shown in Table 7, 10 of the 12 study intersections would operate at LOS D or better during both the morning and afternoon peak hours under Existing and Existing with Project Conditions. The intersection of Bristol Parkway & Slauson Avenue (Intersection #3) operates at LOS F in the morning peak hour and LOS B in the afternoon peak hour under Existing and Existing with Project Conditions, and the intersection of Hannum Avenue & Slauson Avenue (Intersection #1) operates at LOS E in the morning peak hour and LOS D in the afternoon peak hour under Existing Conditions, and at LOS D in both the morning and afternoon peak hours under Existing with Project Conditions

Future with Project Conditions

All future cumulative traffic growth (i.e., ambient and Related Project traffic growth) and transportation infrastructure improvements through Year 2029 described in Chapter 2 were incorporated into this analysis.

Traffic Volumes. The Project-only morning and afternoon peak hour traffic volumes, described in Chapter 3 and shown in Figure 14, were added to the Future without Project (Year 2029) morning and afternoon peak hour traffic volumes shown in Figure 10. The resulting volumes are illustrated in Figure 16 and represent Future with Project Conditions after development of the Project in Year 2029.

Intersection LOS. Table 8 summarizes the results of the Future without Project (Year 2029) and Future with Project Conditions during the weekday morning and afternoon peak hours for the study intersections. As shown in Table 8, eight of the 12 study intersections would operate at LOS D or better during both the morning and afternoon peak hours under Future without Project and Future with Project Conditions. The remaining intersections, including Hannum Avenue & Slauson Avenue (Intersection #1), Marina Freeway & Slauson Avenue (Intersection #2), Bristol Parkway & Slauson Avenue (Intersection #3), and Bristol Parkway & Green Valley Circle (Intersection #10) are projected to operate at LOS E or F during at least one of the morning or afternoon peak hours under Future without Project and Future with Project Conditions.

Cumulative with Project Conditions

All future cumulative traffic growth (i.e., ambient and Related Project traffic growth) and transportation infrastructure improvements through the General Plan horizon year of 2045 were incorporated into this analysis.

Traffic Volumes. The Project-only morning and afternoon peak hour traffic volumes, described in Chapter 3 and shown in Figure 14, were added to the Cumulative without Project (Year 2045) morning and afternoon peak hour traffic volumes shown in Figure 11. The resulting volumes are illustrated in Figure 17 and represent Cumulative with Project Conditions after development of the Project in Year 2045.

Intersection LOS. Table 9 summarizes the results of the Cumulative without Project (Year 2045) and Cumulative with Project Conditions during the weekday morning and afternoon peak hours for the study intersections. As shown in Table 9, eight of the 12 study intersections would operate at LOS D or better during both the morning and afternoon peak hours under Cumulative without Project and Cumulative with Project Conditions. The remaining intersections, including Hannum Avenue & Slauson Avenue (Intersection #1), Marina Freeway & Slauson Avenue (Intersection #2), Bristol Parkway & Slauson Avenue (Intersection #3), and Buckingham Place & Slauson Avenue (Intersection #4) are projected to operate at LOS E or F during at least one of the morning or afternoon peak hours under Cumulative without Project and Cumulative with Project Conditions.

INTERSECTION QUEUING ANALYSIS

The study intersections were also analyzed to determine whether the lengths of intersection turning lanes could accommodate vehicle queue lengths. The queue lengths were estimated using Synchro software, which reports the 95^{th} percentile queue length, in feet, for each approach lane. Detailed queuing analysis worksheets are provided in Appendix D.

RESIDENTIAL STREET CUT-THROUGH ANALYSIS

A residential street cut-through analysis is used to determine potential increases in average daily traffic volumes on designated Local Streets, as classified in the Circulation Element, that can be identified as cut-through trips generated by the Project and that can adversely affect the character and function of those streets.

The Project is not projected to lead to trip diversion along residential Local Streets because the Project's residential access is limited to Slauson Avenue and Buckingham Parkway, which are Arterial Streets. Additionally, regional access to the Project provided by SR 90 and I-405 favor vehicle travel along Arterial Streets. Therefore, no improvement measures to address residential neighborhood traffic are required.

TABLE 6
LEVEL OF SERVICE DEFINITIONS FOR INTERSECTIONS

Level of Service	Definition	Delay [a]	
		Signalized Intersections	Unsignalized Intersections
A	EXCELLENT. No vehicle waits longer than one red light and no approach phase is fully used.	0.0 - 10.0	0.0 - 10.0
B	VERY GOOD. An occasional approach phase is fully utilized; many drivers begin to feel somewhat restricted within groups of vehicles.	10.1 - 20.0	10.1 - 15.0
C	GOOD. Occasionally drivers may have to wait through more than one red light; backups may develop behind turning vehicles.	20.1 - 35.0	15.1 - 25.0
D	FAIR. Delays may be substantial during portions of the rush hours, but enough lower volume periods occur to permit clearing of developing lines, preventing excessive backups.	35.1 - 55.0	25.1 - 35.0
E	POOR. Represents the most vehicles intersection approaches can accommodate; may be long lines of waiting vehicles through several signal cycles.	55.1 - 80.0	35.1 - 50.0
F	FAILURE. Backups from nearby locations or on cross streets may restrict or prevent movement of vehicles out of the intersection approaches. Tremendous delays with continuously increasing queue lengths.	> 80.0	> 50.0

Section 5B
Transit Operations

This section reviews the Project's potential effect on existing transit capacity of transit routes and stops that serve the Project area.

TRAVEL DEMAND ANALYSIS

Although the Project (and other Related Projects) will cumulatively add transit ridership, the Project Site and the Study Area are served by multiple bus lines along Hannum Avenue and Buckingham Parkway, as detailed in Table 2. As illustrated in Figure 6, the nearest stops to the Project Site are located at Hannum Avenue & Buckingham Parkway, serving Culver CityBus Line 3 and Metro Line 108. At this intersection, three of the four bus stops have benches and none include bus shelters. The westbound stop on the north side of Hannum Avenue is the only stop without a bench.

While no reductions to the trip generation in Table 4 were taken to account for transit usage, both the morning peak hour and afternoon peak hour would result in a net reduction of trips. Conservatively assuming 10% of the vehicle trips were taken via transit, approximately -4 morning peak hour and -1 afternoon peak hour vehicle-transit trip would occur. As such, the adjacent transit capacity would not be affected by the change of transit usage attributable to the Project

Section 5C
Driveways

This section provides a qualitative evaluation of the Project vehicle, pedestrian, and bicycle access per Section 5C of the Guidelines.

VEHICLES

Vehicular access to the five-level parking structure on-site would be provided via one Driveway accessed by one Fire Lane connecting Slauson Avenue and Hannum Avenue. The Driveway would provide full access to the parking structure. Pedestrian and bicyclist access to the Project Site would be provided via various entrances around all sides of the Project, including through the parking garage, through the retail space or lobby, through courtyard entrances on the eastern side of the Project Site, and via an entrance along Slauson Avenue. Both the Driveway and Fire Lane intersections would be designed to safely accommodate all anticipated vehicle types generated by the Project. Adequate internal circulation, loading areas, and queuing areas would be provided on-site to limit spillover into the public ROW.

PEDESTRIANS AND BICYCLES

In addition to a pedestrian and bicycle entrance on the Driveway, pedestrian and bicycle access to the Project Site would also be provided separately from the vehicular Driveway via separate entrances along Buckingham Parkway and Slauson Avenue to reduce potential vehicle-pedestrian and vehicle-bicycle conflicts. The Driveway would be designed to provide maximum visibility between all roadway users, including a bumpout. Furthermore, the Project would include landscaping, lighting, and paved sidewalk along Project frontages to create an attractive pedestrian and bicyclist environment. Bicycle parking amenities would also be provided for residents, employees, and visitors to the site.

Section 5D
Parking

This section provides an analysis of the proposed parking and the potential parking impacts of the Project.

PARKING SUPPLY

The Project would provide vehicle and bicycle parking spaces within the parking structure.

In October 2022, the City Council passed a motion that eliminated minimum parking requirements citywide. As a result, no parking is required to be constructed by code. However, the Project would provide a supply of 524 vehicle parking spaces (505 residential, 19 commercial), using the ratios shown in Table 10.

BICYCLE PARKING CODE REQUIREMENTS

CCMC Section 17.320 details the bicycle parking requirements for new developments.

As shown in Table 11, the Project would be required to provide 14 short-term and 90 long-term bicycle parking spaces, for a total of 104 parking spaces. The Project proposes to provide 186 parking spaces, in compliance with the CCMC requirement.

Section 5E
Curb Space Allocation

This section details the review of the management of curb space adjacent to the Project Site, including passenger and commercial loading and parking areas, bus stop facilities, and bicycle and other alternative transportation mode parking, while maintaining visibility at driveways.

ON-STREET PARKING

As previously detailed, there is no on-street parking adjacent to the Project Site.

PASSENGER AND COMMERCIAL LOADING

Passenger and commercial loading would be provided on-site in two separate loading areas along the eastern edge of the fire lane. Passenger pick-up and drop-off will be provided just south of the parking garage entrance, and commercial loading and unloading would occur north of the garage entrance. The commercial loading zone would allow easy loading for tenant pick-up and drop-off, moving trucks, mail delivery, and trash collection. Accommodating the loading zone would not eliminate any existing parking spaces.

The sidewalk along the western boundary of the Project Site would be adjacent to the loading zone and would be designed to meet Americans with Disabilities Act (ADA) accessibility requirements and provide a comfortable and friendly pedestrian environment.

TRANSIT FACILITIES

There is an existing bus stop located adjacent to the eastern boundary of the Project Site at Buckingham Parkway & Slauson Avenue that serves Metro Line 108 and Culver CityBus Line 3, both heading southwest. With the Project development, temporary relocation of the stops may be necessary, as detailed in Chapter 5G. However, no permanent relocation of the bus stop would be necessary, as the Project Driveway would be located along the western boundary of the Project Site. The bus stop is located well over 200 feet away from the Driveway. Therefore, transit stops would not affect visibility at the Driveway.

BICYCLE PARKING FACILITIES

There are currently no existing or proposed public bicycle parking facilities adjacent to the Project Site along Slauson Avenue or Buckingham Parkway. In addition, the Project does not propose the installation of bicycle parking within the public ROW. Therefore, no bicycle parking facilities are anticipated to affect visibility at the Project Driveways.

Section 5F
Safety Analysis

This section details the Project's potential effects on corridors within the HIN identified in *Culver City Bicycle & Pedestrian Action Plan*, as well as the Project's proximity to high-risk corridors and intersections where pedestrian and bicycle involved collisions have been recorded by the City as part of the LRSP, which is currently under development.

VEHICULAR SAFETY

The Project Site is located adjacent to Slauson Avenue, which is identified as part of the HIN in *Culver City Bicycle & Pedestrian Action Plan*. However, as previously discussed, the northern Fire Lane intersection along Slauson Avenue would be designed in accordance with City standards to maximize sight lines and limit potential vehicle-vehicle, vehicle-pedestrian, and vehicle-bicycle conflicts, and the southern Fire Lane intersection at Hannum Avenue & Buckingham Parkway would utilize existing infrastructure, which is designed to limit potential vehicle-vehicle, vehicle-pedestrian, and vehicle-bicycle conflicts. The Project's Driveway location on the Fire Lane would be away from existing intersections to reduce potential turning conflicts with vehicles as well as bicycles and pedestrians.

PEDESTRIAN AND BICYCLE SAFETY

As previously detailed, Slauson Avenue is identified as part of the HIN and is identified in the LRSP as an area with high levels of collisions involving pedestrians and bicyclists. Therefore, the Project would ensure the adjacent sidewalks provide access which meets ADA standards and ensure pedestrians and bicyclists are visible at Project Driveways and Fire Lane intersections.

Section 5G
Construction Impact Analysis

This section summarizes the construction schedule and construction activities associated with the Project. The quantities for trucks and worker activity are preliminary estimates and these values may change once the construction program is finalized.

PROPOSED CONSTRUCTION SCHEDULE

The Project is anticipated to be constructed over an approximately 29-month period, with completion anticipated in Year 2029. Peak haul truck activity occurs during the grading / excavation phase and peak worker activity occurs during the building finishing phase. These two phases of construction were studied in greater detail.

GRADING / EXCAVATION SUBPHASE

With the implementation of the Construction Management Plan, which is described in more detail below, it is anticipated that almost all haul truck activity to and from the Project Site would occur outside of the morning and afternoon peak hours. In addition, as discussed in more detail in the following section, worker trips to and from the Project Site would also occur outside of the peak hours. Therefore, no peak hour construction traffic constraints are expected during the grading / excavation and shoring phase of construction.

Haul trucks would travel on approved truck routes designated within the City and take the most direct route to the appropriate freeway ramps. The haul route will be reviewed and approved by the City.

Excavation / Shoring Phase Trip Generation

Based on projections compiled for the Project, approximately 10,000 cubic yards (CY) of material would be excavated and removed from the Project Site over a 60-day period. It is anticipated that a maximum of 10 haul truckloads per workday, based on an anticipated haul truck capacity of 14 CY, would be required during this phase. Thus, up to 10 daily truck trips (5 inbound, 5 outbound) are forecasted to occur during the excavation and grading period, with approximately two trips per hour (one inbound, one outbound) uniformly over a typical six-hour off-peak hauling period.

In addition, a maximum of 24 daily construction worker trips are anticipated during the excavation/ shoring period. The 24 construction worker trips would result in 48 one-way vehicle trips (24 inbound, 24 outbound) to and from the Project Site on a daily basis. It is anticipated that the majority of workers would arrive on-site prior to the weekday morning commuter peak hour and leave prior to or after the afternoon commuter peak hour. Therefore, no peak hour construction traffic constraints are expected during the excavation / shoring subphase of construction.

BUILDING FINISHING PHASE

During the building finishing phase, parking for construction workers would generally be provided on-site in the parking garage or off-site at nearby private parking lots. Restrictions against workers parking in the public ROW in the vicinity of (or adjacent to) the Project Site would be identified as part of the Construction Management Plan. Construction materials storage and truck staging would generally be contained on-site or in the parking lane along the Project frontage on Slauson Avenue and Buckingham Parkway, subject to City approval.

The traffic constraints associated with construction workers depend on the number of construction workers employed during various phases of construction, as well as the travel mode and travel time of the workers. In general, the hours of construction typically require workers to be on-site before the weekday morning commuter peak period and allow them to leave before or after the afternoon commuter peak period (i.e., arrive at the site prior to 7:00 AM and depart before 4:00 PM or after 6:00 PM). Therefore, most, if not all, construction worker trips would occur outside of the typical weekday commuter peak periods.

According to construction projections prepared for the Project, the building finishing phase would employ the most construction workers, with a maximum of 100 workers per day. The estimated number of daily vehicle trips associated with the construction workers is approximately 200 one-way trips (100 inbound, 100 outbound), but nearly all those trips would occur outside of the peak hours, as described above. As such, the building finishing phase of Project construction is not expected to cause traffic constraints at any of the study intersections.

In addition, it is anticipated that approximately two daily delivery truck trips (one inbound, one outbound) would occur during the building finishing phase. As part of the Construction Management Plan, these trips would occur during off-peak hours and are not anticipated to affect peak hour traffic conditions.

POTENTIAL CONSTRAINTS ON ACCESS, TRANSIT, AND PARKING

Project construction is not expected to create hazards for roadway travelers, bus riders, or parkers, so long as commonly practiced safety procedures for construction are followed. Such procedures and other measures (e.g., to address temporary traffic control, lane closures, sidewalk closures) have been incorporated into the Construction Management Plan.

Access

Construction activities are expected to be primarily contained within the Project Site boundaries. While construction fences may encroach into the public ROW (e.g., sidewalks and roadways) adjacent to the Project Site, suitable pedestrian and bicyclist travels paths will be maintained in accordance with City requirements. Additionally, two-way operations would be maintained along both roadways. Temporary traffic controls would be provided to direct traffic around any closures as required in the Construction Management Plan and emergency access would not be impeded.

The use of the public ROW would require temporary re-routing of pedestrian and bicycle traffic. The Construction Management Plan would include measures (e.g., use of light-duty barriers and cones, use of directional signage, maintaining continuous and unobstructed pedestrian paths, and/or providing overhead covering) to ensure pedestrian and bicycle safety along the affected sidewalks, bicycle facilities, and temporary walkways.

Transit

The bus stop located adjacent to the Project Site at Buckingham Parkway & Slauson Avenue may need to be relocated during Project construction. The stop serves Metro Line 108 heading southwest toward Marina del Rey and Venice, as well as Culver CityBus Line 3 heading southwest toward Playa Vista. A specific spot for the bus stop relocation would be included in the Construction Management Plan through coordination with Metro and the City. No spot has been determined at this time.

Parking

There is no street parking available along the Project frontage.

CONSTRUCTION MANAGEMENT PLAN

A detailed Construction Management Plan, including street closure information, a detour plan, haul routes, and a staging plan would be prepared and submitted to the City for review and approval prior to commencing construction. The Construction Management Plan would formalize how construction would be carried out and identify specific actions that would be required to reduce effects on the surrounding community. The Construction Management Plan shall be based on the nature and timing of the specific construction activities and other projects in the vicinity of the Project Site, and shall include, but not be limited to, the following elements, as appropriate:

- Advance bilingual notification of adjacent property owners and occupants of upcoming construction activities, including durations and daily hours of operation.

- Temporary pedestrian, bicycle, and vehicular traffic controls during all construction activities on Hannum Avenue and Buckingham Parkway to ensure traffic safety on the public ROW. These controls shall include, but not be limited to, flag people trained in pedestrian and bicycle safety.

- Scheduling of construction activities to reduce the effect on traffic flow on surrounding arterial streets.

- Spacing of trucks so as to discourage a convoy effect.

- Containment of construction activity within the Project Site boundaries to the extent feasible.

- Safety precautions for pedestrians and bicyclists through such measures as alternate routing and protection barriers shall be implemented as appropriate.

- Scheduling of construction-related deliveries, haul trips, etc., to occur outside the commuter peak hours.

- Maintenance of a log, available on the job site at all times, documenting the dates of hauling and the number of trips (i.e., trucks) per day.

- Identification of a construction manager and provision of a telephone number for any inquiries or complaints from residents regarding construction activities. The telephone number shall be posted at the site readily visible to any interested party during site preparation, grading, and construction.

It should be noted that the Project is requesting extended construction hours, which will reduce the Project's construction traffic impacts on peak hour periods, as work will begin before the morning peak traffic period and end after the afternoon peak traffic period. Further details would be provided in the final Construction Management Plan.

It is likely that construction management plans would also be submitted for approval to the City by the Related Projects prior to the start of construction activities. As part of the City's established review process of construction management plans, potential overlapping construction activities and proposed haul routes would be reviewed to minimize the impacts of cumulative construction activities on any particular roadway.

Chapter 6

Summary and Conclusions

This study was undertaken to analyze the potential transportation impacts of the mixed-use development Project on regional VMT as well as the local street system. The following summarizes the results of this analysis:

- The Project is located at 100 Corporate Pointe Walk.
- The Project proposes the development of a mixed-use building with 351 apartment units, 30 of which designated for Low Income households, and 4,742 sf of ground floor retail uses. The Project would replace the existing 112,000 sf of office uses. The Project is anticipated to be complete in Year 2029.
- The Project is estimated to generate 768 net new daily trips, including a net reduction of 36 morning peak hour trips (-118 inbound trips, 82 outbound trips) and net reduction of eight afternoon peak hour trips (65 inbound trips, -73 outbound trips).
- The Project is consistent with the applicable City plans, programs, ordinances, and policies and would not result in geometric design hazard impacts.
- The Project was required to perform a VMT analysis because, among other reasons, it is not located within 0.5 miles of a transit hub. Based on the VMT analysis, the Project was determined to be below the citywide VMT threshold for household VMT. Therefore, the Project would not result in a significant VMT impact, and no mitigation measures would be required.
- The Project provides adequate internal circulation to accommodate vehicular, pedestrian, and bicycle traffic without impeding traffic movements on City streets.
- The design of the Project Driveway does not introduce safety hazards for pedestrians, bicyclists, or motorists.
- The Project will incorporate pedestrian and bicycle-friendly designs, such as bicycle parking and improved sidewalks.
- The Project would satisfy the CCMC bicycle parking requirements.
- All construction activities would occur outside of the commuter morning and afternoon peak hours to the extent feasible and will not result in significant traffic impacts. A Construction Management Plan will ensure that construction impacts are less than significant.

Memorandum of Understanding

Memorandum of Understanding for Transportation Study

This Memorandum of Understanding (MOU) acknowledges and agrees to all the City of Culver City requirements and fees for the review of a transportation study for the following project.

Date Submitted: ____________ MOU Version # 1

Project Name: 100 Corporate Pointe

Project Address: 100 Corporate Pointe Walk, Culver City, CA 90230

Project Description: Construction of a multi-family building with 351 dwelling units (including 30 affordable units) and 4,742 square feet of ground-floor commercial spaces replacing a 112,000 square foot general office building

Land Use	Gross Floor Area (sq. ft.) *Defined per latest ITE publication*	Residential Units (#)
General Retail	4,742	
Multi-Family Housing		321
Affordable Housing		30

Project Horizon Year: 2028

Ambient Growth Rate (% per year): 1%

Directional Distribution (%): N: 15 S: 25 E: 10 W: 50

Trip Generation Rates: Show AM, PM and daily trip generation rates for each land use and attach total daily trips generation calculations. Indicate ITE Latest Edition/Other ITE 11th Ed

Land Use	ITE Code#	AM Trips		PM Trips		Daily Totals	
		In	Out	In	Out	In	Out
See Table 2							

Study Intersections: Show all study intersections, intersections subject to capacity analysis credit for advanced traffic signal control synchronization, whether intersections are signalized or non-signalized, and use the same numbering system for all lists of intersections and figures in the study.

No.	Intersection	Signalized/Non-Signalized	Jurisdiction
	See Table 3		

Residential Streets: Show all residential streets to be studied.

No.	Street Name	Limits	Jurisdiction
	N/A		

Trip Credits: Indicate trip credits to be requested (subject to City approval)

	Trip Credits	Yes/No
Existing Uses	112,000 sf general office uses	Yes
Pass-By Trips		No
Internal Trip Capture		No
Transit-Oriented Development (TOD)		No
Transportation Demand Management (TDM)		No

Related Projects: Before the start of any proposed project analysis, consultants shall:

1. Obtain a list of related projects from the Culver City Current Planning Division and other affected jurisdictions.
2. Prepare a draft list of "related projects specific to the proposed project."
3. Obtain written approval from the City of the "related projects specific to the proposed project."

Maps: The following maps shall be attached to the MOU:

1. A map showing the study intersections and street segments to be analyzed, including City limit lines where applicable.
2. A map showing the project's trip distribution percentages for each land use (inbound and outbound) on the area's road network.
3. A map showing the project's trip assignments at the study intersections and project driveways, as well as road segments when applicable.
4. A site plan of the project showing property lines, alleys, project's driveways and nearby driveways and intersections on both sides of the street including dimensions.

Proposed Mitigation and Transportation Improvements: Any proposed transportation improvement(s) or mitigation measure(s) shall be listed and accompanied by plans of the existing and proposed improvements, including city limit lines and existing and proposed property lines. The City may initially accept conceptual plans to be included in the Transportation Study. Detailed design of such improvements will be part of the project's plans submittals.

Post-Occupancy Traffic Counts: By signing below, the Property Owner/ Developer/Applicant hereby agrees to pay for and submit to the City a post-occupancy traffic count analysis of the development to the satisfaction of the City. The analysis shall determine the amount of actual traffic (motor vehicle, bicycle, and pedestrian) generated by the development compared to the ITE trip generation rates. The analysis shall include a traffic count of all onsite driveways taken upon reaching eighty-five percent (85%) occupancy of the total building gross floor area or within one (1) year of the issuance of the first Temporary Certificate of Occupancy (TCO), as determined by the City. The data shall be used to confirm the findings in the approved study and not result in any additional traffic mitigation measures and/or conditions of approval on the subject project.

Fees: Payment of a fee to the City's PWD for the City's processing of the MOU shall be required before the City approves the MOU. Payment for review of the Transportation Study shall be paid before the City's PWD completes its review of the Transportation Study. Said fees shall be per the most recent Fee Schedule as approved by the City Council.

Applicant Information:

	Property Owner/Applicant	Developer/Applicant	Traffic Consultant

TABLE 1
CULVER CITY TRANSPORTATION STUDY SCREENING REVIEW

Analysis [a]	Required?	Analysis to be Provided in Transportation Study
Transportation Study Contents		
Site Plan Review	Yes	A site plan will be provided which provides existing and proposed on-site and off-site Project details and improvements as specified in the Transportation Study Guidelines.
Existing Transportation Network Review	Yes	The existing transportation network review will establish the bicycle, pedestrian, transit, and auto traffic conditions in which the project is proposed, which shall be illustrated in the following maps: ▪ Study Area Circulation Map ▪ Traffic Routes Map ▪ Base Year Traffic Volumes Map ▪ Project Trip Generation and Future Traffic Volumes Map ▪ Site Vicinity Map ▪ Lane Configurations Map
Existing Transit Network Review	Yes	For transit analysis, the study will provide an analysis of weekday transit service and stops/stations within a quarter mile of the project site, including: ▪ Confirmation of transit features listed in the Project Description and Existing Transportation Network Review ▪ Any existing operational conflicts or hazards to transit operations in the study area, especially along travel lanes where transit vehicles operate and at transit stop/station locations
CEQA Transportation Analysis and Mitigations		
Programs, Plans, Ordinances, and Policies	Yes	The study will review the City's programs, plans, ordinances and policies addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities, as specified in Table 1 of the *Culver City Transportation Study Criteria and Guidelines* .
VMT - Land Use Projects	Yes	The proposed development Project exceeds the thresholds for screening out from VMT analysis. The study will include a VMT analysis.
VMT - Transportation Projects	No	The proposed development is not considered a "Transportation Project" and therefore, it is not conflicting or inconsistent with CEQA Guideline Section 15064.3(b)(2).
Geometric Design Hazards	Yes	The study will provide a review of potentially hazardous conditions due to geometric design features (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., oversized vehicles).

Notes:
[a] Based on *Culver City Transportation Study Criteria and Guidelines*, City of Culver City, July 2020.

TABLE 1 (CONTINUED)
CULVER CITY TRANSPORTATION STUDY SCREENING REVIEW

Analysis [a]	Required?	Analysis to be Provided in Transportation Study
Supplemental Transportation Analysis Requirements		
Traffic Operations	Yes	The study will assess the ability of the circulation system to accommodate the addition of vehicular traffic generated by the related projects and the subject project, including: ▪ Intersection LOS and queuing including trip generation, distribution under Existing, Existing with Project, Future without Project, Future with Project, Cumulative without Project, and Cumulative with Project Conditions ▪ Driveway LOS and queuing including potential vehicular conflicts, motorists' visibility at project driveways, and potential conflicts with pedestrians and bicyclists, ▪ Ability to conduct loading operations on the site and maneuver into parking stalls ▪ The potential increase in average daily traffic on the adjacent street segments
Transit Operations	Yes	The study will identify regional and local fixed-route transit operators providing service to the project and obtain relevant ridership data. The study will document potential project trip impact on transit demand and capacity for routes servicing the project.
[a] Related Project information provided by	Yes	The study will provide a review of the Project driveways and consult with the City Mobility & Traffic Engineering and Current Planning Divisions to determine if vehicle access is limited on certain streets where the City is focusing on efforts to enhance the pedestrian-oriented environment. A pedestrian and bicyclist access assessment would also be included to ensure the project avoids unsafe conflicts between pedestrians, cyclists, and autos.
Parking	Yes	The study will review the Project's effect on the on-street parking conditions adjacent to the Project Site and ensure compliance with PWD's guidelines.
Curb Space Allocation	Yes	The study will review the proposed curb space allocation to ensure that the curb space is managed appropriately between passenger and commercial loading and parking, bus stop facilities, and bike and other alternative transportation mode parking while maintaining visibility at driveways.
Safety Analysis	Yes	The Project is not located on a high injury network (HIN) street, as identified in the Local Road Safety Plan (LRSP) or other analysis. The study will evaluate the adverse effect of the project and associated measures to enhance safety conditions. If it is determined that the project would have an adverse effect on a HIN corridor including intersections and road segments, the applicant shall work with the City's PWD to improve roadway safety at impacted locations for all users, including the design and construction of engineering measures and possibly safety education measures. The applicant shall also work with the City to confirm that the project does not inhibit future implementation of projects identified by the City in the LRSP. The LRSP will also be reviewed to determine if the project is located near a hot spot of collisions that involve people walking and bicycling. If this is the case, the applicant shall demonstrate how project features will not worsen the issue per the LRSP.

Notes:
[a] Based on *Culver City Transportation Study Criteria and Guidelines*, City of Culver City, July 2020.

Appendix C

VMT Analysis Worksheets

Culver CITY

VMT Tool

Analysis is required. This project does not meet screening criteria. No separate analysis is required for retail.

Project Name

100 Corporate Point Walk

Project Parcel — Click here for parcel viewer

4134020023

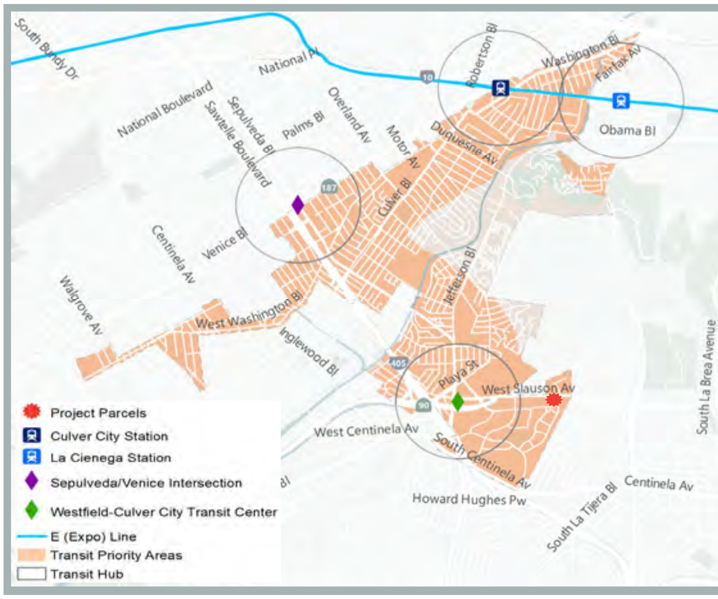
Project Screening

Apply to Full Project

Is this project within ½ mile of one of the following transit hubs? - Culver City Expo Station - La Cienega/Jefferson Expo Station - Westfield-Culver City Transit Center - Sepulveda/Venice intersection	No
Is the project located within any TPA and are at least 15% of the on-site residential units are affordable?	No
Does this project generate fewer than 250 daily trips?	No

Apply to Specific Land Uses

Is the retail component of project fewer than 50,000 square feet in size at every store?	Yes
Is this residential component of the project 100% affordable housing?	No



Project Daily Trips	1,578

Project Land Use ?

Residential

	Value (du)
Single Family	
Multi-Family	321
Affordable Housing	
Family	30
Senior	
Special Needs	
Permanent Supportive	

Office

	Value (ksf)
Standard	

Medical

	Value (ksf)
Medical Office	
Hospital	

Industrial

	Value (ksf)
Light Industrial	
Manufacturing	
Warehousing / Self-Storage	

Movie Studio

	Value (ksf)
Office	
Post Production	
Stage	
Support	

The following land uses will require separate impact analysis (outside of this tool) if not screened out. Please leave the land uses in the table below if they are part of a mixed use project.

Retail

	Value (ksf)
General	4.742
Supermarket	
Bank	
Health Club	
Gas Station	
Auto Repair	
Home Improvement Superstore	
Free-Standing Discount	
Restaurant Non-fast-food	
Restaurant Fast-food	
	Value (seats)
Theater w/ Matinee	

Hotel

	Value (rooms)
Hotel	
Motel	

School

	Value (students)
University	
High School	
Middle School

Culver CITY

VMT Tool - TDM

Preliminary Results

Project: 100 Corporate Point Walk

Significant VMT Impact?

	Daily Vehicle Trips	Daily VMT	Household VMT per Capita	Work VMT per Employee	Household Threshold = 15% below 8.3 (7.1)	Work Threshold = 15% below 10.1 (8.6)
Proposed Project	1,514	11,207	6.8	N/A	**No**	**N/A**
Project w/ Mitigation	1,514	11,207	6.8	N/A	**No**	**N/A**

Transportation Demand Management Strategies

Parking

Off-Street Parking Pricing

X proposed project

Applies to employees, residents, and/or visitors

	Employees	Residents	Visitors	
	$	$ 0	$	Baseline Off-Street Cost ($/space)
	$	$ 25	$	Proposed Off-Street Cost ($/space)

On-Street Parking Pricing

proposed project

Applies to employees, residents, and/or visitors

	Employees	Residents	Visitors	
	$	$	$	Baseline On-Street Cost ($/space)
	$	$	$	Proposed On-Street Cost ($/space)

Parking Supply

proposed project

Applies to residential land uses only

505 Required Number of Spaces (for resident)

505 Proposed Number of Spaces (for resident)

Transit

Transit Frequency

proposed project

Applies to all land uses

Baseline Frequency (minutes)

Proposed Frequency (minutes)

Point-to-point Shuttles

proposed project

Applies to employment uses only

Select to include in the project.

Last Mile Shuttles

proposed project

Applies to employment uses only

Select to include in the project.

Commute Trip Reductions

Commute Marketing Program

X proposed project

Applies to employees, and/or residents

Employees

X Residents

Financial Commuter Incentives

proposed project

You may choose only one Financial Commuter Strategy, Commuter Incentives or Transit Subsidies.

Applies to employment uses only

Commuter Incentives

$ per Financial Incentive ($/day or $/month)

$ per Average Baseline Commute Cost ($/day or $/month)

Applies to employees, and/or residents

Transit Subsidies

Employees — Percentage of Cost Subsidized

Residents — Percentage of Cost Subsidized

Site Design

Pedestrian-Oriented Design

proposed project

Applies to all land uses

Select to include in the project.

Project Screening

	Yes/No
Is this project within ½ mile of one of the following transit hubs? - Culver City Expo Station - La Cienega/Jefferson Expo Station - Westfield-Culver City Transit Center - Sepulveda/Venice intersection	No
Is the project located within any TPA and are at least 15% of the on-site residential units are affordable?	No
Does this project generate fewer than 250 daily trips?	No
Is the retail component of project fewer than 50,000 square feet in size at every store?	Yes
Is this residential component of the project 100% affordable housing?	No

Analysis is required. This project does not meet screening criteria. No separate analysis is required for retail.

HCM 6th Ctrl Delay	16.5
HCM 6th LOS	B

Notes

User approved volume balancing among the lanes for turning movement.
* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.
User approved changes to right turn type.

HCM 6th LOS		F

Notes

User approved volume balancing among the lanes for turning movement.
* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.
User approved changes to right turn type.

HCM 6th Ctrl Delay			37.1
HCM 6th LOS			D

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

User approved changes to right turn type.

TNM	Traffic Noise Model
USEPA	United States Environmental Protection Agency

EXECUTIVE SUMMARY

ESA has prepared this report to assist the City of Culver City (City) in their assessment of the potential noise and vibration environmental impacts associated with the 100 Corporate Pointe Project (Project), pursuant to the California Environmental Quality Act (CEQA). The analysis below concludes that the Project (described in more detail below) would have a less than significant impact on noise and vibration.

This report summarizes the potential for the Project to conflict with applicable noise and vibration regulations, standards, and thresholds. The findings of the analyses are as follows:

- Although the noise generated by project construction would be higher than the ambient noise levels, which may result in a temporary increase in ambient noise levels, construction noise would be temporary and cease once project construction is completed. Additionally, it was established that construction of the Project would not exceed construction noise over ambient with the implementation of PDF-NOI-1 and PDF-NOI-2.

- Operation of the Project would not exceed the City's traffic or operational stationary source noise standards. Implementation of PDF-NOI-3 and PDF-NOI-4 would ensure that amplified sound and mechanical stationary equipment located within the Project would comply with the City's standards. Thus, the Project would not result in a substantial permanent increase in ambient noise levels in the vicinity of the Project above levels existing without the Project, and impacts would be less than significant.

- The Project would not result in the generation of excessive groundborne vibration or groundborne noise levels from construction or operational activities. Thus, the Project would result in a less-than-significant impact from groundborne vibration and groundborne noise.

- The nearest airport would not interfere with those residing or working in the Project as no airport is located within 2 miles of the site and is not located in an airport influence area.

SECTION 1
Introduction

ESA has conducted an acoustical study to evaluate the potential noise and vibration impacts associated with construction activities, surface transportation, and other aspects of Project construction and operations that have the potential to impact noise-sensitive land uses. The objectives of this noise report are to:

- Quantify the existing ambient noise environment at the Project Site;
- Evaluate the construction and operational noise and vibration impacts to noise-sensitive receptors (e.g., residential uses) based on applicable standards and thresholds;
- Provide, if needed, noise PDFs to meet applicable noise regulations and standards as specified by City regulations.

1.1 Project Location

The Project Site is an approximately 195,796 square foot (sf) (4.49 acre) property generally located at 100-101 Corporate Pointe Walk, Culver City, CA 90230. The Project Site is identified by Assessor's Parcel Numbers (APN) 4134-020-023 and 4134-020-020. **Figure 1**, *Regional and Project Vicinity Locations*, illustrates the Project Site location.

1.2 Existing Site Conditions

The Project Site is currently developed with an existing 112,276 square foot (sf) office building, a three-story parking garage, and related surface parking and landscaping, as shown in **Figure 2,** *Project Location – Aerial Photograph*. Ingress/egress to the Project Site is available via two driveways off Slauson Avenue to the north (one for ingress and one for egress) and via one driveway at the southwest corner of the Project Site at the intersection of Buckingham Parkway and Hannum Avenue.

1.3 Project Description

The Project would demolish the existing office building and parking facilities and construct a mixed-use residential and commercial/retail development. The Project would develop 351 residential units, including 30 affordable housing units, and 4,742 sf of ground-floor, neighborhood-serving retail space within a five- to seven-story building. Approximately 31,756 square feet of common open space and 13,380 square feet of private open space would be included as part of the Project. Proposed amenities include courtyards, a pool, gym/work spaces, community rooms, and rooftop decks. The Project would also include 524 vehicle parking spaces (inclusive of 211 spots that will be EV ready, EV capable, or full EV charging spaces), 104 bicycle parking spaces, and more than 39,000 sf of landscaping.

1.4 Noise and Vibration Descriptors

1.4.1 Noise

Noise is most often defined as unwanted sound. Although sound can be easily measured, the perceptibility of sound is subjective, and the physical response to sound complicates the analysis of its impact on people. People judge the relative magnitude of sound sensation in subjective terms, such as "noisiness" or "loudness." Sound pressure magnitude is measured and quantified using a logarithmic ratio of pressures, the scale of which gives the level of sound in decibels (dB). The human hearing system is not equally sensitive to sound at all frequencies. Therefore, to approximate the human, frequency-dependent response, the A-weighted filter system is used to adjust measured sound levels. The A-weighted decibel (dBA), typically applied to community noise measurements,[1] de-emphasizes low frequencies to which human hearing is less sensitive and focuses on mid- to high-range frequencies. The range of human hearing is approximately 3 to 140 dBA, with 110 dBA considered intolerable or painful to the human ear. In a non-controlled environment, a change in sound level of 3 dB is considered "just perceptible," a change in sound level of 5 dB is considered "clearly noticeable," and a change in sound level of 10 dB is perceived as a doubling of sound volume.[2] A change in sound level of 1 dB cannot be perceived by the human ear except in carefully controlled laboratory experiments.[3] Although the A-weighted scale accounts for a range of people's responses and is, therefore, commonly used to quantify individual event or general community sound levels, the degree of annoyance or other response effects also depends on several other factors. These factors include:

- Ambient (background) sound level;
- Magnitude of sound event with respect to the background noise level;
- Duration of the sound event;
- Number of event occurrences and their repetitiveness; and
- Time of day that the event occurs.

2 Bies & Hansen, Engineering Noise Control, 1988.

3 California Department of Transportation (Caltrans), *Technical Noise Supplement to the Traffic Noise Analysis Protocol (TeNS)*, September 2013, Section 2.2.1.

In an outdoor environment, sound levels attenuate with distance. Such attenuation is called “distance loss” or “geometric spreading” and is influenced by the noise source configuration (i.e., point source or line source). For a point source, such as stationary equipment, the rate of sound attenuation is usually 6 dB per doubling of distance from the noise source at urban, acoustically “hard” sites, or highly acoustically reflective settings that preserve sound energy (water, asphalt, and concrete). Within such environments, a sound level of 50 dBA at a distance of 25 feet from the noise source would attenuate to 44 dBA at a distance of 50 feet. For a line source within an acoustically hard environment, such as a roadway with a constant flow of traffic, the rate of sound attenuation is 3 dB per doubling of distance.[4] In addition, structures (e.g., buildings and solid walls) and natural topography (e.g., hills) that obstruct the line-of-sight between a noise source and a receptor further reduce the noise level if the receptor is located within the “shadow” of the obstruction, such as behind a sound wall. This type of sound attenuation is known as “barrier insertion loss.” If a receptor is located behind the wall but still has a view of the source (i.e., line-of-sight not fully blocked), some barrier insertion loss would still occur but to a lesser extent. A receptor located on the same side of the wall as a noise source may actually experience an increase in the perceived noise level as the wall reflects noise back to the receptor, thereby compounding the noise. Noise barriers can provide noise level reductions ranging from approximately 5 dBA (where the barrier just breaks the line-of-sight between the source and receiver) up to 20 dBA with a more substantial barrier.[5]

Community noise levels usually change continuously during the day. The equivalent sound level (L_{eq}) is normally used to describe community noise. The L_{eq} is the equivalent steady-state A-weighted sound level that would contain the same acoustical energy as the time-varying A-weighted sound level during the same time interval. For intermittent noise sources, the maximum noise level (L_{max}) is normally used to represent the maximum noise level measured during the measurement. Maximum and minimum noise levels, as compared to the L_{eq}, are a function of the characteristics of the noise source. As an example, sources, such as generators, have maximum and minimum noise levels that are similar to L_{eq} since noise levels for steady-state noise sources do not substantially fluctuate. However, as another example, vehicular noise levels along local roadways result in substantially different minimum and maximum noise levels when compared to the L_{eq} since noise levels fluctuate during pass-by events.

To assess noise levels over a given 24-hour time period, the Community Noise Equivalent Level (CNEL) descriptor is used in land use planning. CNEL is the time average of all A-weighted sound levels for a 24-hour period with a 10-dBA adjustment (upward) added to the sound levels which occur in the night (10:00 p.m. to 7:00 a.m.) and a 5-dBA adjustment (upward) added to the sound levels which occur in the evening 7:00 p.m. to 10:00 p.m.). These penalties attempt to account for increased human sensitivity to noise during the quieter nighttime periods, particularly where sleep is the most probable activity. CNEL has been adopted by the State of California to define the community noise environment for development of a community noise element of a General Plan and is also used by the City for land use planning in the City’s General Plan Noise Element (Noise Element).[6]

1.4.2 Vibration

Vibration is an oscillatory motion through a solid medium in which the motion's amplitude can be described in terms of displacement, velocity, or acceleration. The response of humans, buildings, and equipment to vibration is more accurately described using velocity or acceleration.[7] Vibration amplitudes are usually described in terms of peak levels, as in peak particle velocity (PPV). The peak level represents the maximum instantaneous peak of the vibration signal. In addition, vibrations can be measured in the vertical, horizontal longitudinal, or horizontal transverse directions. Ground vibrations are most often greatest and can damage buildings when they propagate in the vertical direction.[8] Therefore, the analysis of groundborne vibration associated with the Project was evaluated in the vertical direction. Typically, groundborne vibration generated by man-made activities attenuates rapidly with distance from the source of the vibration. Man-made vibration issues are, therefore, usually confined to short distances from the source (i.e., 50 feet or less). The vibration attenuation equation is presented below.

[Equation 1]

PPVequip = PPVref (25/D)n
where , PPVref = reference source vibration, D = Distance, and
n = factor for soil attenuation (typically n = 1.5).

1.5 Existing Noise Conditions

1.5.1 Noise-Sensitive Receptor Locations

Some land uses are considered more sensitive to noise than others due to the amount of noise exposure and the types of activities typically involved at the receptor location. Residences, schools, motels and hotels, libraries, religious institutions, hospitals, nursing homes, and parks are generally more sensitive to noise than commercial and industrial land uses. Existing noise-sensitive uses in the vicinity of the Project Site are summarized below:

- **R1** – Holy Cross Cemetery and Mortuary to the north of the Project Site across Slauson Avenue.
- **R2** – Multi-family residential uses located to the east of the Project Site along Buckingham Parkway.
- **R3** – Fox Hills Parkette to the south of the of the Project Site across Buckingham Parkway.

The nearest sensitive land uses to the Project Site are shown in **Figure 3**, *Noise Measurements and Sensitive Receptor Locations*. Other noise-sensitive uses in the vicinity of the Project Site are located further away than those listed above and would be less impacted by Project-related noise and vibration.

1.5.2 Local Noise Sources and Ambient Noise Levels

Typically, to establish ambient noise levels, which are largely attributed to traffic noise, ambient noise measurements are taken at locations representing the nearby sensitive receptor land uses around a project.

[7] FTA, Transit Noise and Vibration Impact Assessment Manual, p. 110, September 2018.
[8] Caltrans, Transportation Related Earthborne Vibrations, page 4, February 2002.

Table 1, *Ambient Noise Levels at Sensitive Receptors*, presents the ambient noise levels measured at each of the identified sensitive receptors in Section 1.5.1, above.

TABLE 1
AMBIENT NOISE LEVELS AT SENSITIVE RECEPTORS

Location, Duration, and Date of Measurements	Average L_{eq}
R1, Holy Cross Cemetery and Mortuary to the north of the Project Site across Slauson Avenue.	75.1
R2, Multi-family residential uses located to the east of the Project Site along Buckingham Parkway.	65.4
R3, Fox Hills parkette to the south of the of the Project Site across Buckingham Parkway. This measurement represents the ambient environment for sensitive receptor location R3 (and for R4).	62.8

NOTE:
The ambient noise measurements were conducted using the Larson-Davis Soundtrack LxT1 Precision Integrated Sound Level Meter, which is a Type 1 standard instrument as defined in the American National Standard Institute S1.4. All instruments were calibrated and operated according to the applicable manufacturer specifications. The microphone was placed at a height of 5 feet above the local grade at the enumerated locations.

SOURCE: ESA 2025

1.5.3 Commercial Land Uses

Commercial land uses, such as retail and office, are not considered sensitive noise receptors. However, for informational purposes only, the following commercial land uses near the Project Site were evaluated and are referenced herein for convenience:

- **R4** – Commercial land uses west of the Project Site, approximately 35 feet from the Project boundary. (because R3 is in close proximity to the R4 location, noise levels measured at the R3 noise measurement are assumed to be representative of R4).

1.5.4 Vibration-Sensitive Receptor Locations

Groundborne vibration generated by man-made activities (e.g., rail and roadway traffic, mechanical equipment, and typical construction equipment) diminishes rapidly as the distance from the source of the vibration become greater. The Federal Transportation Association (FTA) uses a screening distance of 100 feet for high vibration-sensitive buildings (e.g., hospitals with vibration-sensitive equipment) and 50 feet for residential uses. When vibration-sensitive uses are located within those distances from a project site, vibration impact analysis may be warranted. With respect to structures, vibration-sensitive receptors generally include historic buildings with construction susceptible to damage, buildings in poor structural condition, and uses that require precision instruments (e.g., hospital operating rooms or scientific research laboratories). The nearest vibration-sensitive use in relation to structural damage is Sensitive Receptor R4 (i.e., the commercial uses located approximately 35 feet to the west of the Project Site).

SECTION 2
Regulatory Setting

Government agencies have established noise regulations and policies to protect citizens from potential hearing damage and various other adverse physiological and social effects associated with noise and groundborne vibration.

2.1 Federal

Under the authority of the Noise Control Act of 1972, the United States Environmental Protection Agency (USEPA) established noise emission criteria and testing methods published in Parts 201 through 205 of Title 40 of the Code of Federal Regulations (CFR) that apply to some transportation equipment (e.g., interstate rail carriers, medium trucks, and heavy trucks) and construction equipment. In 1974, the USEPA issued guidance levels for the protection of public health and welfare in residential land use areas of an outdoor L_{dn} of 55 dBA and an indoor L_{dn} of 45 dBA. These guidance levels are not considered as standards or regulations and were developed without consideration of technical or economic feasibility.[9] There are no federal noise standards that directly regulate environmental noise related to the construction or operation of the Project.

The FTA has developed noise criteria in its Transit Noise and Vibration Impact Assessment Manual.[10] For a general assessment of construction noise, which is warranted for projects in an early assessment stage when the equipment roster and schedule are undefined and only a rough estimate of construction noise levels is practical, the FTA assessment manual recommends noise criteria of 90 dBA L_{eq} (1-hour) during daytime for residential receptors. For a detailed assessment of construction noise, the FTA assessment manual recommends noise criteria of 80 dBA L_{eq} (8-hour) during daytime for residential receptors.

There are no federal vibration standards or regulations adopted by an agency that are applicable to evaluating vibration impacts from land use development projects such as the Project. However, the FTA has developed groundborne vibration criteria in its Transit Noise and Vibration Impact Assessment Manual.[11] The vibration damage criteria adopted by the FTA are shown in **Table 2,** *Construction Vibration Damage Criteria***.**

TABLE 2
CONSTRUCTION VIBRATION DAMAGE CRITERIA

Building Category	PPV (in/sec)
I. Reinforced-concrete, steel, or timber (no plaster)	0.5
II. Engineered concrete and masonry (no plaster)	0.3
III. Non-engineered timber and masonry buildings	0.2
IV. Buildings extremely susceptible to vibration damage	0.12

SOURCE: FTA, Transit Noise and Vibration Impact Assessment Manual, September 2018.

In addition, FTA has also adopted standards associated with human annoyance for groundborne vibration impacts for the following three land-use categories: Vibration Category 1 – High Sensitivity; Vibration Category 2 – Residential; and Vibration Category 3 – Institutional. FTA defines Category 1 as buildings where vibration would interfere with operations within the building, including vibration-sensitive research and manufacturing facilities, hospitals with vibration-sensitive equipment, and university research operations. Vibration-sensitive equipment includes, but is not limited to, electron microscopes, high-resolution lithographic equipment, and normal optical microscopes. Category 2 refers to all residential land uses and any buildings where people sleep, such as hotels and hospitals. Category 3 refers to institutional land uses such as schools, churches, other institutions, and quiet offices that do not have vibration-sensitive equipment, but still have the potential for activity interference. The vibration thresholds associated with human annoyance for these three land-use categories are shown in **Table 3,** *Groundborne Vibration Impact Criteria for General Assessment*.

TABLE 3
GROUNDBORNE VIBRATION IMPACT CRITERIA FOR GENERAL ASSESSMENT

Land Use Category	Frequent Events[a]	Occasional Events[b]	Infrequent Events[c]
Category 1: Buildings where vibration would interfere with interior operations.	65 VdB[d]	65 VdB[d]	65 VdB[d]
Category 2: Residences and buildings where people normally sleep.	72 VdB	75 VdB	80 VdB
Category 3: Institutional land uses with primarily daytime use.	75 VdB	78 VdB	83 VdB

[a] “Frequent Events” is defined as more than 70 vibration events of the same source per day.
[b] “Occasional Events” is defined as between 30 and 70 vibration events of the same source per day.
[c] “Infrequent Events” is defined as fewer than 30 vibration events of the same kind per day.
[d] This criterion is based on levels that are acceptable for most moderately sensitive equipment such as optical microscopes.
SOURCE: FTA 2018.

2.2 State of California

The State of California has established noise insulation standards for new multi-family residential units, hotels, and motels that would be subject to relatively high levels of transportation-related noise. These requirements are collectively known as the California Noise Insulation Standards (Title 24, California Code of Regulations [CCR]). The noise insulation standards set forth an interior standard of 45 dBA CNEL in any habitable room. The standards require an acoustical analysis demonstrating that dwelling units have been designed to meet this interior standard where such units are proposed in areas subject to exterior noise levels greater than 60 dBA CNEL. Title 24 standards are typically enforced by local jurisdictions through the building permit application process.

2.3 City of Culver City

The City of Culver City has adopted a number of policies, which are based in part on federal and State regulations, that are intended to control, minimize, or mitigate environmental noise effects. There are no City-adopted policies or standards that relate to groundborne vibration, but the FTA does have such standards and/or policies that can provide guidance for this analysis but are not regulatory requirements for the Project. The regulations and policies that are relevant to Project construction and operational noise levels are discussed below.

2.3.1 City of Culver City Noise Element of the General Plan

The City's General Plan Noise Element includes the following policies related to noise control:

Goal N-4: Construction noise. Minimized noise and vibration generated from construction activities.

N-4.1: Limit disturbance from new construction. Minimize construction noise and vibration impacts to reduce the disturbance from new development.

N-4.2: Construction hour enforcement. Enforce limits on construction hours as included in the City's Municipal Code.

N-4.4: Noise-sensitive construction techniques. Encourage using construction techniques that minimize noise and vibration levels.

Goal N-5: Stationary sources of noise. Minimize noise generated from operational stationary sources, including industrial and commercial activity, entertainment, sporting and other outdoor events, maintenance activity, and machinery.

N-5.1: Event noise. Minimize noise impacts from major outdoor events at educational institutions, parks, and other locations within the city.

N-5.2: Machinery noise. Minimize noise impacts from machinery, including pool and spa pumps, power tools in garages, gardening tools, and gasoline-powered leaf blowers. Enforce restrictions included in the Noise Ordinance limiting noise generated from these sources. Require screening or other noise reducing methods in the Building Permit process.

2.3.2 City of Culver City Municipal Code

Chapter 9.07 of the City of Culver City Municipal Code (CCMC) provides specific noise restrictions and exemptions for noise sources within the City. CCMC noise regulations state that construction activity shall be prohibited, except between the hours of 8:00 a.m. and 8:00 p.m. Mondays through Fridays; 9:00 a.m. and 7:00 p.m. Saturdays; and 10:00 a.m. and 7:00 p.m. Sundays. There are no established noise limits for noise associated with construction activity when construction occurs within the permitted hours. It is prohibited for any person to operate any radio, disc player or cassette player or similar device at a construction site in a manner that results in noise levels that are audible beyond the construction site property line.

Section 9.07.055(B) of the CCMC prohibits the operation of a loudspeaker or sound amplifying equipment on private property. It shall be prohibited for any persons to operate a loud speaker or sound amplifying equipment for the purposes of transmitting messages, giving instructions, or providing entertainment which is audible at a distance of fifty (50) feet or beyond the subject's property line without first filing an application and obtaining a permit as set forth in this Chapter.

SECTION 3

Significance Thresholds

In accordance with Appendix G of the State *CEQA Guidelines*, the proposed Project would result in potentially significant impacts if it would result in:

NOISE-1: Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

NOISE-2: Generation of excessive groundborne vibration or groundborne noise levels.

NOISE-3: For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

The paragraphs below provide guidance for evaluating the Project against these thresholds.

3.1 Temporary or Permanent increase in Noise (NOISE-1)

3.1.1 Construction

Based on the City's Noise Element and its Noise Restrictions Ordinance, Project construction would normally be considered to exceed threshold NOISE-1 if any of the following occur:

- If, without City approval for extended construction hours, Project construction activities occurred between the hours of 8:00 p.m. and 8:00 a.m. Mondays through Fridays; 7:00 p.m. and 9:00 a.m. Saturdays; or 7:00 p.m. and 10:00 a.m. Sundays. Construction occurring within these non-permitted hours without City approval would automatically be assumed to cause a significant noise impact. However, if the Project's request for extended construction hours (7:00 a.m. to 8:00 a.m. on weekdays and 8:00 a.m. to 9:00 a.m. on Saturdays) is granted by the City , any noise occurring during these times would not automatically be considered excessive and would instead be subject to a determination of construction noise impacts pursuant to the construction-related noise criteria below, as applicable.
- If Project construction activities do not incorporate noise reduction techniques consistent with Policy N-4.4 of the Noise Element.
- If Project construction activities result in noise levels of 5 dBA L_{eq} greater than measured ambient noise levels (see Table 1) at noise-sensitive receptors.

3.1.2 Operations

Project operational noise would normally be considered to exceed threshold NOISE-1 if either of the following occur:

- If Project-related operational on-site (i.e., non-roadway) noise sources such as outdoor building mechanical/electrical equipment or parking facilities increase the ambient noise level (Leq) at noise-sensitive uses by 5 dBA Leq.

- If Project-related traffic noise causes the ambient noise levels measured at the property line of affected uses to increase by 3 dBA CNEL to or within the "normally unacceptable" or "clearly unacceptable" categories; or if the Project causes the ambient noise levels measured at the property line of affected uses to increase by 5 dBA CNEL or more within the "normally acceptable" or "conditionally acceptable" categories.

3.2 Groundborne Vibration (NOISE-2)

Project vibrations would normally be considered to exceed threshold NOISE-2 if Project-induced vibrations would cause structural damage and/or disrupt the operations of vibration-sensitive land uses. The CEQA Guidelines do not define the levels at which groundborne vibration or groundborne noises are considered "excessive." The City has not adopted a significance threshold to assess vibration impacts for CEQA analyses from construction activities for land use development projects. Additionally, there are no federal, state, or local vibration regulations or guidelines directly applicable to the Project. However, the FTA has published a guidance document for the analysis of vibration relating to transportation and construction-induced vibration. The Project is not subject to FTA regulations; nonetheless, the FTA guidance serves as useful tool to evaluate groundborne vibration impacts. For the purpose of this analysis, the vibration criteria for structural damage established in Table 7-5 of the FTA's *Transit Noise and Vibration Impact Assessment*[12] are used to evaluate the potential vibration impacts of the Project on nearby buildings or structures. The buildings or structures nearest to the Project Site are the commercial buildings located immediately to the west of the Project Site (represented by Sensitive Receptor R4), approximately 35 feet when measured from the structure of the off-site façade to the existing on-site structures (to be demolished), which are Category III buildings. The nearest structures that would be analyzed for human annoyance are the residences 100 feet to the east of the Project Site (represented by Sensitive Receptors R1, R2, and R3). Thus, Project construction and operational groundborne vibration would normally be considered to exceed threshold NOISE-2 if either of the following occur:

- If Project construction activities cause groundborne vibration levels to exceed 0.2 inch-per-second PPV at the nearest residential buildings or 0.5 in/sec PPV at the nearest commercial buildings.

- If Project construction activities cause groundborne vibration levels to exceed 75 VdB at nearby residential uses for occasional events.

---

[12] FTA, Transit Noise and Vibration Impact Assessment Manual, September 2018.

3.3 Airport or Airstrip Noise (NOISE-3)

Projects would normally be considered to exceed threshold NOISE-3 if the project site is located within the 65 dBA CNEL noise contour or greater of an airport or airstrip. Code of Federal Regulations (CFR) Title 14, Part 150 prescribes the procedures, standards, and methodology governing the development, submission, and review of airport noise exposure maps, which typically includes a 65 dBA CNEL contour.

SECTION 4
Methodology

4.1 Methodology

4.1.1 On-Site Construction Noise

On-site construction noise impacts were evaluated by determining the noise levels generated by the different types of construction activity anticipated, calculating the construction-related noise level at nearby sensitive receptor locations, and comparing these construction-related noise levels to existing ambient noise levels (i.e., noise levels without construction noise) at those receptors. The Project construction would occur between the hours of 8:00 a.m. and 8:00 p.m. Mondays through Fridays; 9:00 a.m. and 7:00 p.m. Saturdays; and 10:00 a.m. and 7:00 p.m. Sundays; therefore, the analysis includes a comparison to daytime ambient noise levels. The Project is requesting extended construction hours, which if approved by the City, would allow the Project's construction to begin at 7:00 a.m. daily on Monday through Friday and 8:00 a.m. daily on Saturdays for the entire duration of construction (i.e., 1-hour earlier Monday through Saturday than specified in Chapter 9.07 of the CCMC). The types of construction equipment used, construction phasing, and construction schedule were provided by the Project's construction representative. As indicated by the construction equipment list, no high-impact pile driving or vibratory pile equipment would be used for Project construction.

Over the course of a construction day, the highest noise levels would be generated when multiple pieces of construction equipment are being operated concurrently. Conservatively, the Project's estimated construction noise levels were calculated for a scenario in which all pieces of construction equipment would operate simultaneously, with the loudest type of equipment located at the construction area nearest to the affected receptors and the remaining equipment located at the center of the Project Site. The following steps were undertaken to assess construction-period noise impacts.

1. Ambient noise levels at surrounding sensitive receptor locations were estimated based on field measurement data (see Table 1);
2. Typical noise levels for each type of construction equipment were obtained from the Federal Highway Administration Roadway Construction Noise Model (FHWA RCNM);
3. Distances between construction site locations (noise sources) and surrounding sensitive receptors were measured using Project architectural drawings and site plans and Google Earth;
4. The construction noise levels were then calculated for each construction phase using the FHWA RCNM, conservatively, in terms of hourly L_{eq}, for sensitive receptor locations based on the standard point source noise-distance attenuation factor of 6.0 dBA for each doubling of distance, assuming that all of the equipment for each construction phase would be in use concurrently and that the loudest equipment would be located at the edge of the Project Site closest to the sensitive receptor locations and;

5. Construction noise levels were then compared to the construction noise significance thresholds identified above.

4.1.2 Off-Site Roadway Noise

Roadway noise impacts have been evaluated using the Caltrans Technical Noise Supplement (TeNS) method based on the roadway traffic volume data provided in the Transportation Study[13] prepared for the Project. This method allows for the definition of roadway configurations, barrier information (if any), and receiver locations. Roadway noise attributable to Project development was calculated and compared to baseline noise levels that would occur under the "Without Project" condition.

4.1.3 Stationary Point-Source Noise (Operations)

Stationary point-source noise impacts were evaluated by identifying the noise levels generated by outdoor stationary noise sources, such as rooftop mechanical equipment, parking structure, and loading area activity, calculating the hourly L_{eq} noise level from each noise source (incorporating individual usage factor for each equipment) at sensitive receptor property lines, and comparing such noise levels to existing ambient noise levels. More specifically, the following steps were undertaken to calculate outdoor stationary point-source noise impacts:

1. Ambient noise levels at surrounding sensitive receptor locations were estimated based on field measurement data (see Table 1);
2. Typical noise levels generated by each type of stationary point-source noise generator including mechanical equipment, loading area, and parking structure operations were obtained from measured noise levels for similar equipment/activities, noise levels published in environmental noise assessment documents for land use development projects or scientific journals, or noise levels from equipment manufacturer specifications;
3. Distances between stationary point-source noise generators and surrounding sensitive receptor locations were measured using Project architectural drawings, Google Earth, and site plans;
4. Stationary point-source noise levels were then calculated for each sensitive receptor location based on the standard point source noise-distance attenuation factor of 6 dBA for each doubling of distance;
5. Noise level increases, if any, were compared to the stationary point-source noise significance thresholds identified above in Section 3 *Significance Thresholds*; and
6. Outdoor mechanical equipment is assessed based on the CCMC requirements and measured data, and their impacts on the nearby offsite receptors are determined based on their distance from these receptors. The noise levels determined at the offsite, noise-sensitive receptors are then compared to the stationary source noise significance thresholds identified in the CCMC.

Parking-related noise levels were estimated using the methodology recommended by FTA for the general assessment of stationary transit noise source. Using the methodology, the Project's peak hourly noise level that would be generated by the onsite parking levels was estimated using the following FTA equation for a parking lot:

[13] Gibson Transportation Consulting, Inc., Transportation Study for 100 Corporate Pointe, March 2025.

[Equation 2]

$L_{eq}(h) = SEL_{ref} + 10\log(NA/1000) - 35.6$, where

$L_{eq}(h)$ = hourly L_{eq} noise level at 50 feet

SEL_{ref} = reference noise level for stationary noise source represented in sound exposure level (SEL) at 50 feet

N_A = number of automobiles per hour

The Project's loading areas are located to the western side of the Project. Based on a noise survey that was conducted at a loading area and trash collection facilities by ESA, loading area activity (namely idling semi-trucks and backup alarm beeps) could generate noise levels of approximately 70 dBA L_{eq} at a reference distance of 50 feet.[14]

4.1.4 Groundborne Vibration

Groundborne vibration impacts due to the Project's construction activities were evaluated by identifying potential vibration sources (i.e., construction equipment), estimating the vibration levels at the potentially affected receptor, and comparing the Project's activities to the applicable vibration significance thresholds. Vibration levels were calculated based on the FTA published standard vibration velocities for various construction equipment operations.[15] The vibration velocities were calculated based on a point source with standard distance propagation conditions, pursuant to FTA procedures. Construction of the Project would not use impact pile driving methods, and as such, impact pile driving vibration is not included in the construction vibration analysis. Vibration levels are estimated using the vibration attenuation equation provided above in Section 1.4.2.

4.1.5 Exterior to Interior Noise Attenuation

Exterior, interior with windows open, and interior with windows closed noise levels are calculated for on-site construction noise and on-site stationary operational noise. Buildings with windows open would provide approximately 13 dBA exterior/interior noise reduction. With windows closed, the minimum exterior-to-interior noise attenuation for typical structures in California is approximately 25 to 30 dBA, or potentially more with improved noise abatement materials or techniques. For purposes of this analysis, the exterior-to-interior noise attenuation for buildings with windows closed is conservatively assumed to be 25 dBA.[16] In addition any exterior noise reduction techniques such as noise barriers or mufflers were applied to the interior noise reduction calculations for on-site construction and stationary operational noise, as applicable.

---

14 The loading dock facility noise measurements were conducted at a loading dock facility at a Wal-Mart store using the Larson-Davis 820 Precision Integrated Sound Level Meter ("SLM") in May 2003. The Larson-Davis 820 SLM is a Type 1 standard instrument as defined in the American National Standard Institute S1.4. All instruments were calibrated and operated according to the applicable manufacturer specification. The microphone was placed at a height of approximately 5 feet above the local grade.

15 FTA, Transit Noise and Vibration Impact Assessment Manual, 2018, Table 7-4.

16 Gordon, C.G., W.J. Galloway, B.A. Kugler, and D.L. Nelson. NCHRP Report 117: Highway Noise: A Design Guide for Highway Engineers. Washington, D.C.: Transportation Research Board, National Research Council, 1971.

4.2 Project Characteristics and Project Design Features

4.2.1 Project Characteristics

The PDFs in Section 4.2.2 below have the potential to reduce noise and vibration generation and were considered in the analysis of potential impacts.

4.2.2 Project Design Features

As discussed above, the City's General Plan Noise Element includes Policy N-4.4, which encourages projects to use construction techniques to minimize noise and vibration. Consistent with the Noise Element, the following PDFs would be incorporated into the Project's construction plans:

> **PDF-NOI-1: Noise Barrier Implementation**. **PDF-NOI-1: Noise Barrier Implementation**. Temporary noise barriers will be installed along the southern and eastern Project boundary to shield the sensitive receptors from construction noise. A barrier will be installed along the eastern and southeastern boundary of the Project Site along Buckingham Parkway and will have a minimum height of 15 feet oriented to block the line-of-sight to the nearest residences to the east and southeast along Buckingham Parkway. A barrier will also be installed along the southern boundary of the Project Site along Buckingham Parkway near the intersection with Hannum Avenue and will have a minimum height of 8 feet oriented to block the line-of-sight to the open space area to the south along Buckingham Parkway. Details on the location and heights of the noise barrier are shown in **Figure 4**, *Construction Noise Barrier Location*. These barriers will be installed during the individual demolition, site preparation, grading/ excavation (during surface grading and excavation to a depth of at least 15 feet below grade), and the overlapping phases of site preparation and grading/excavation (during surface grading and excavation to a depth of at least 15 feet below grade) and the overlapping phases of foundations/concrete and building construction. The temporary noise barriers will be made of a solid material or affixed with sound deadening blankets or curtains capable of reducing on-site construction noise levels by a minimum of 6 dBA. Stationary or mobile open access points or gates are permissible to allow for adequate and safe worker, vehicle, and equipment access to the construction areas. Access points or gates will be closed or otherwise the line-of-sight to the nearest residences and open space areas referenced above will be blocked during the use of noise-generating heavy equipment within approximately 200 feet of the access points or gates.
>
> **PDF-NOI-2: Construction Equipment Noise Control.** Construction-related equipment will be designed to incorporate appropriate noise muffling devices and/or noise enclosures, parapets, or shielding (e.g. sound blankets) so as not to exceed the criteria for construction noise of more than 5 dBA over ambient at nearby off-site sensitive receptors.
>
> **PDF-NOI-3: Mechanical Equipment Noise.** All building mechanical equipment and/or ventilation systems not fully enclosed will be designed to not exceed sound level limits or the noise level requirements of the Noise Element's regulation of Stationary Noise Sources through the use of quiet fans, duct silencers, parapets, or similar noise attenuation methods.
>
> **PDF-NOI-4: Noise Control – Amplified Sound Systems.** If the Project installs permanent outdoor amplified sound systems, the systems will be located in discrete areas of the outdoor common open space areas such that the sound will be substantially blocked by the proposed on-site building or walls from off-site residential receivers. Section 9.07.055(B) of the CCMC prohibits the operation of a loudspeaker or sound amplifying equipment for the purposes of transmitting messages, giving instructions or providing entertainment that is audible at a distance

of fifty (50) feet or beyond the subject's property line without first filing an application and obtaining a permit as set forth in Chapter 9.07, Noise Regulations, of the CCMC. The systems will at a minimum be designed so as not to result in a perceivable increase at the nearest noise-sensitive residential receptor. Specifically, daytime outdoor amplified sound systems will not result in an increase of 5 dBA L_{eq} over existing ambient noise conditions at the nearest noise-sensitive residential receptor. Nighttime speaker noise, if it occurs, will comply with the exterior noise standards identified in the Regulation of Stationary Noise Sources (Noise Element). A qualified noise consultant will provide written documentation to the appropriate City department showing that the design of the system(s) complies with the maximum noise levels at the property line of the nearest off-site sensitive receivers, if applicable.

Figure 4
Construction Noise Barrier Location

ESA

SECTION 5
Environmental Impacts

5.1 Construction Noise (NOISE-1)

5.1.1 On-Site Construction Noise

Noise impacts from construction activities are generally a function of the noise generated by construction equipment, equipment locations, the sensitivity of nearby land uses, and the timing and duration of the noise-generating activities. Construction would include the following activities: demolition, site preparation, grading/excavation, foundations/concrete, building construction, paving, and finishing/painting. Each activity would involve the use of different types of construction equipment, as denoted by the applicant, and, therefore, has its own distinct noise characteristics. As indicated above, CCMC noise regulations state that construction activity shall be prohibited, except between the hours of 8:00 a.m. and 8:00 p.m. Mondays through Fridays; 9:00 a.m. and 7:00 p.m. Saturdays; and 10:00 a.m. and 7:00 p.m. Sundays. In the event construction occurs outside of the permitted hours without approval from the City of Culver, a significant impact would occur because of the noncompliance with existing regulations. It is anticipated that the Project would seek approval from the City to initiate construction from as early as 7:00 a.m. to 8:00 a.m. on weekdays and 8:00 a.m. to 9:00 a.m. on Saturdays (i.e., 1-hour earlier Monday through Saturday than specified in Chapter 9.07 of the CCMC).

Project construction would require the use of mobile heavy equipment with high noise-level characteristics. Individual pieces of construction equipment anticipated during Project construction could produce maximum noise levels of 75 dBA to 90 dBA at a reference distance of 50 feet from the noise source, as shown in **Table 4**, *Construction Equipment Noise Levels*. These maximum noise levels would occur when equipment is operating under full power conditions. The estimated usage factors for the equipment are also shown in Table 4. The usage factors are based on FHWA's *Roadway Construction Noise Model User's Guide*.[17] To more accurately characterize construction-period noise levels, the average (hourly L_{eq}) noise level associated with each construction stage is calculated based on the quantity, type, and usage factors for each type of equipment used during each construction stage and are typically attributable to multiple pieces of equipment operating simultaneously.

Construction noise levels were estimated based on an industry standard sound attenuation rate of 6 dBA per doubling of distance (from the 50-foot reference distance) for point sources (e.g., construction equipment). For the purposes of providing a conservative analysis, the noisiest construction equipment was assumed to operate simultaneously with an estimated usage factor at the construction area within a range of 35 feet to 700 feet between the chosen sensitive receptors and commercial building. These assumptions represent a worst-case noise scenario as the noisiest construction equipment used in a given phase would not typically operate concurrently and at full power, and the location of activities are routinely spread across

[17] Federal Highway Administration (FHWA), Roadway Construction Noise Model User's Guide, 2006.

the construction site rather than concentrated close to the nearest noise-sensitive receptors. In practice, equipment is used on construction sites intermittently over the course of a construction day and generally do not operate in close quarters at a single location in order to provide for on-site safety and accident prevention. In addition, the Project is anticipated to have an overlap of construction activity phases. The loudest noise levels would occur during the overlapping of site preparation and grading/excavation.

TABLE 4
CONSTRUCTION EQUIPMENT NOISE LEVELS

Equipment	Estimated Usage Factor, %	Maximum Noise Level at 50 feet from Equipment, dBA (L_{max})
Compressor (Air)	40	78
Compactor (Ground)	20	83
Concrete Saw	20	90
Crane	16	81
Dozer	40	82
Dump Truck	40	76
Excavator	40	85
Forklift	10	75
Front End Loader	40	80
Generator	50	82
Grader	40	85
Man Lift	20	85
Other Equipment	50	85
Pavement Scarifier	20	85
Paver	50	85
Pumps	50	77
Roller	20	85
Scraper	40	84
Tractor / Loader / Backhoe	40	80
Vacuum Street Sweeper	10	80

SOURCE: FHWA Roadway Construction Noise Model User's Guide, 2006.

As shown in **Table 5**, *Estimated Construction Noise Levels at Sensitive Receptors*, exterior construction noise levels are estimated to reach a maximum of 72.7 dBA L_{eq} at the off-site receptor locations R1, 67.5 dBA L_{eq} at R2, and 67.2 dBA L_{eq} at R3 with the incorporation of PDF-NOI-1 and PDF-NOI-2. PDF-NOI-1 would require compliance with Noise Element Goal N-4 and its respective Policy N-4.4 in addressing construction noise through noise reduction techniques and require an incorporation of a soundwall that would be constructed in a way to reduce construction noise levels by 6 dB to the sensitive receptors to the east and south of the Project Site. PDF-NOI-2 would also be implemented, which can reduce noise levels by a minimum of 6 dBA with the usage of improved mufflers. A study prepared for the U.S. Department of Transportation found that in cases where a particular piece of equipment either does not have or has a very poor muffler, the application of a good muffler will reduce the overall noise by 6 to 12 dBA.[18]

TABLE 5
ESTIMATED CONSTRUCTION NOISE LEVELS AT SENSITIVE RECEPTORS

Noise-Sensitive Receptor	Maximum Construction Noise Levels, [a, b, c,d] (Exterior/Interior with windows open/Interior with windows closed) Hourly L_{eq} (dBA)	Daytime Noise Threshold (Ambient + 5 dBA)	Exceeds Threshold? (Exterior/Interior with Windows Open/Interior with Windows Closed)[d]
R1	72.7 [f]	80.1	No
R2	67.5 / 54.5 / 42.5 [e,f]	70.4	No / No / No
R3	67.2 [e,f]	67.8	No

a Estimated construction noise levels represent the worst-case condition when noise generators are located closest to the receptors.
b Bold values indicate an exceedance of daytime noise threshold.
c Noise levels account for an exterior-to-interior noise attenuation rate of 13 dBA for buildings with windows open and 25 dBA for buildings with windows closed.
d Receptor R1 and R3 are outdoor sensitive receptors and therefore there is no interior noise reduction.
e Includes a 6 dB reduction from a sound barrier pursuant to PDF-NOI-1.
f Includes a 6 dB reduction from the usage of improved mufflers on applicable construction equipment pursuant to PDF-NOI-2.

On-Site Construction Noise – Commercial Land Uses

For informational purposes only, nearby commercial land uses were analyzed at location R4. As shown in **Table 6**, *Estimated Construction Noise Levels at Commercial Land Uses*, noise levels would be 55.8 dBA L_{eq} at R4. Note that receptor R4 represents commercial office buildings with no exterior uses other than driveways, parking, and other similar uses, and as such, exterior noise levels were not analyzed. The maximum increase in interior noise would be 7.0 dBA L_{eq} at receptor R4 relative to the ambient interior noise level.

TABLE 6
ESTIMATED CONSTRUCTION NOISE LEVELS AT COMMERCIAL LAND USES

Commercial Land Use	Maximum Construction Noise Levels, [a, b] (Exterior / Interior) Hourly L_{eq} (dBA)	Ambient Noise Level – Daytime (dBA L_{eq}) [c]
R4	NA / 55.8	62.8

a Estimated construction noise levels represent the worst-case condition when noise generators are located closest to the receptors.
b Noise levels account for an exterior-to-interior noise attenuation rate of 25 dBA for buildings with windows closed.
c Note that location R4 represents commercial land uses and as such, exterior noise levels were not analyzed. In addition, Receptor R3 noise measurements were applicable to this location.

[18] Toth, William J. 1979, August. “Noise Abatement Techniques for Construction Equipment.” Prepared for the National Highway Traffic Safety Administration. US Department of Transportation.

5.1.2 Off-Site Construction Noise

Delivery and haul truck trips would occur throughout the construction period, including between 7:00 a.m. and 8:00 p.m. Monday through Friday, between 8:00 a.m. and 7:00 p.m. on Saturday, and between 10:00 a.m. and 7:00 p.m. on Sunday (upon approval of applicant's Extended Hours of Construction Permit). Construction trips from workers and vendors and haul trips to the access site would travel along the local freeways and get off on Mariana Freeway and turn right/east onto and continue along Slauson Avenue to reach the Project Site. Therefore, off-site construction noise will be evaluated along these roadway segments, which were provided by the traffic engineer. It is anticipated that the maximum one-way haul trips would occur during demolition activities and would produce 320 trips per day. Demolition would result in approximately 2 trips per day from vendors and 20 trips per day from workers.

[a] Calculated based on existing traffic volumes.

SOURCE: ESA, 2025.

As shown in **Table 7**, *Off-Site Construction Traffic Noise Impacts – Existing (2025) Plus Construction Conditions*, the addition of 320 haul truck trips, 2 vendor truck trips, and 20 worker trips per day (40 truck trips, 1 vendor trip, and 10 worker trips per peak hour over an 8 hour work day) would result in a maximum increase of 0.8 dBA on the roadways surrounding the Project Site. A 3 dBA increase in noise levels is considered a perceptible increase in noise levels and an increase of 5 dBA over the ambient condition is considered a clearly noticeable increase in noise levels.[19] Although this addition of construction vehicles would result in a temporary increase roadway noise levels, the increase of 0.8 dBA would be less than the perceptible or clearly noticeable standards of noise level increases. Therefore, impacts would be less than significant.

[19] Caltrans, Technical Noise Supplement (TeNS), 2013.

5.2 Operational Noise (NOISE-1, NOISE-3)

5.2.1 Fixed Mechanical Equipment

The Project would include new mechanical equipment (e.g., air ventilation equipment), which would be located at the roof level. Mechanical equipment such as air conditioning equipment and emergency generators may generate audible noise levels. Equipment such as emergency generators would be located within enclosed mechanical rooms, which would shield the noise at off-site noise-sensitive uses so as to avoid land use noise conflicts with adjacent uses and minimize audible increases in exterior noise levels at off-site noise-sensitive uses. **Table 8**, *Mechanical Equipment Noise Levels at Noise-Sensitive Receptors*, presents the estimated on-site mechanical equipment noise levels at the off-site receptor locations. As shown in Table 8, the estimated noise levels from the mechanical equipment would range from 50.9 dBA (L_{eq}) to 25.9 dBA (L_{eq}) at receptor locations R1 through R3 when the mechanical equipment is placed at the Project Site boundary (approximately 100 feet from all receptors). The noise levels produced from the mechanical equipment would be below the existing ambient noise levels. As such, the estimated noise levels at all off-site receptor locations would be below the significance threshold of 5 dBA (L_{eq}) above ambient noise levels. To ensure noise levels do not exceed ambient noise levels, PDF-NOI-3 would ensure compliance with the CCMC by ensuring mechanical equipment is enclosed or provided with sufficient noise suppression equipment/technology. As such, the Project would not result in the generation of a substantial permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established by the City, and impacts from mechanical equipment noise would be less than significant.

TABLE 8
MECHANICAL EQUIPMENT NOISE LEVELS AT NOISE-SENSITIVE RECEPTORS

Receptor Location [a]	Existing Ambient Noise Levels,[b] dBA (L_{eq})	Estimated Noise from Project Mechanical Equipment,[c,d] (Exterior/Interior with windows open/Interior with windows closed) dBA (L_{eq})	Ambient + Project Noise Levels (Exterior/Interior with windows open/Interior with windows closed), dBA (L_{eq})	Significance Threshold [e]	Exceedance over Significance Threshold	Significant Impact?
R1	75.1	50.9	75.1	80.1	0.0	No
R2	65.4	50.9 / 37.9 / 25.9	65.6 / 52.6 / 40.6	70.4	0.0	No
R3	62.8	50.9	63.1	67.8	0.0	No

NOTES:

a Receptors R1 and R3 are outdoor sensitive receptors and, therefore, there is no interior noise reduction.

b The ambient noise level is based on the measured daytime noise levels shown in Table 1.

c Exterior reference noise levels for air condenser units, fans, and related equipment, the primary sources of noise from fixed mechanical equipment, would be 81.9 dBA Leq measured at a distance of 5 feet (based on noise data from large shopping center projects in Southern California). Refer to: City of Moreno Valley, Moreno Valley Walmart Noise Impact Analysis, Table 9-1, Page 71, February 10, 2015; and City of Pomona, Pomona Ranch Plaza Walmart Expansion Project, Table 4.4-5, Pg. 4.4-33, August 2014. Assumes mechanical equipment noise generated by the closest Project building to each sensitive receptor.

d Noise levels account for an exterior-to-interior noise attenuation rate of 13 dBA for buildings with windows open and 25 dBA for buildings with windows closed.

e Significance thresholds are equivalent to the measured daytime ambient noise levels, plus 5 dBA.

SOURCE: ESA 2025

5.2.2 Parking Structure Noise

Ingress/egress driveways to the internal parking garage/structure would be located on the western project site boundary with access from Slauson Avenue to the north and Buckingham Parkway to the south. Sources of noise within the at-grade parking structure would primarily include vehicular movements, engine noise, and vehicle door opening and closing. However, noise generated within the parking structure would be effectively shielded from off-site sensitive receptor locations because the structure would be fully enclosed on all sides and is further blocked by the Project building on the north, east, and south sides. However, for purposes of this analysis, peak hour trips from the Project are assumed to occur at the closest parking garage driveway to each sensitive receptor. Based on the traffic data provided to ESA, the morning peak hour traffic volume would result in 153 vehicles entering and exiting the parking structure. The vehicles could enter the Project Site from either Slauson Avenue or Buckingham Parkway.[20] To provide a worse-case conservative analysis, the noise levels shown below in Table 9 account for all 153 vehicles entering the parking structure from the same entrance (based on FTA's calculation for noise generated by parking lot traffic).[21] **Table 9,** *On-Site Parking Noise Levels at Noise-Sensitive Receptors*, presents the estimated noise levels from the parking garage at the off-site receptor locations. As indicated in Table 9, the estimated noise levels from the Project's parking garage would be well below existing ambient noise levels and the significance threshold of 5 dBA (L_{eq}) above ambient noise levels. As such, the Project would not result in the generation of a substantial permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established by the City, and impacts from parking facilities would be less than significant.

TABLE 9
ON-SITE PARKING NOISE LEVELS AT NOISE-SENSITIVE RECEPTORS

d Significance thresholds are equivalent to the measured daytime ambient noise levels, plus 5 dBA.
SOURCE: ESA 2025

5.2.3 Loading Areas and Refuse Collection

Temporary loading for passengers (conservatively assumed to be truck loading operations for this analysis) would be provided along the Project driveway which connects to Slauson Avenue and Buckingham Parkway. Retail and residential trash collection would take place in a loading area to the north of the site. Based on a noise survey that was conducted at a loading area and trash collection facilities by ESA, loading area activity (namely idling semi-trucks and backup alarm beeps) and trash compactors could generate

20 Gibson Transportation Consulting, Inc., Transportation Study for 100 Corporate Pointe, March 2025
21 FTA, Transit Noise and Vibration Impact Assessment. September, 2018, Tables 4-13 and 4-14.

noise levels of approximately 70 dBA L_{eq} and 66 dBA L_{eq}, respectively, at a reference distance of 50 feet.[22] Delivery truck idling is restricted to no more than five consecutive minutes in the loading area pursuant to State regulation (Title 13 CCR, Section 2485). Pursuant to Title 13 CCR, Section 2485, signs would be posted in delivery loading areas specifying this idling restriction. Based on the engine idling limitation of five minutes, the hourly average noise level would be 59.2 dBA L_{eq} at 50 feet. As shown in **Table 10,** *Loading Areas and Refuse Collection Noise Levels,* loading activity and trash compaction would be reduced to 43.2 dBA L_{eq} or lower at the closest sensitive receptors located to the Project Site. Therefore, the noise levels from the Project's loading and refuse collection areas would not exceed by 5 dBA over the ambient noise levels captured at sensitive receptors in the Project vicinity, and impacts would be less than significant.

TABLE 10

a Receptors R1 and R3 are outdoor sensitive receptors and, therefore, there is no interior noise reduction.
b The ambient noise level is based on the measured daytime noise levels shown in Table 1.
c Noise levels account for an exterior-to-interior noise attenuation rate of 13 dBA for buildings with windows open and 25 dBA for buildings with windows closed.
d Significance thresholds are equivalent to the measured daytime ambient noise levels, plus 5 dBA.
e R2 and R3 assume 15 dB and 10 dB attenuation from building shielding, respectively.
SOURCE: ESA 2025

5.2.5 Operational Outdoor Open Space Noise

Outdoor common spaces for residents would include lounge seating, gathering spaces, and possibly small speakers installed in discreet areas to be used for low volume ambient sound and music, to be developed in accordance with PDF-NOI-4. Occasional events for residents only may be held throughout the year within the courtyards or roof decks as an amenity for the residents.

Noise from residents within the project site would be considered less than significant pursuant to *Make UC a Good Neighbor v. Regents of University of California*. Following *Make UC a Good Neighbor,* Assembly Bill (AB) 1307 added Section 21085 to the Public Resources Code to confirm that the effects of noise generated by project occupants and their guests on human beings is not a significant impact on sensitive receptors for residential projects for the purpose of CEQA. As stated previously, PDF-NOI-4 would ensure

22 The loading dock facility noise measurements were conducted at a loading dock facility at a Wal-Mart store using the Larson-Davis 820 Precision Integrated Sound Level Meter (SLM) in May 2003. The Larson-Davis 820 SLM is a Type 1 standard instrument as defined in the American National Standard Institute S1.4. All instruments were calibrated and operated according to the applicable manufacturer specification. The microphone was placed at a height of approximately 5 feet above the local grade.

noise from amplified speakers would not exceed the noise levels set forth by Culver City. Therefore, impacts in regards to open space noise/events would be less than significant.

5.2.4 Composite Noise Level Impacts from On-Site Operations

An evaluation of composite noise levels, including all Project-related noise sources plus existing ambient noise levels, was conducted to identify the potential maximum Project-related noise level increase that may occur at the noise-sensitive receptor locations. The overall sound environment at the sensitive receptors surrounding the Project Site would include contributions from each on-site individual noise source associated with maximum daily operation of the Project. Principal on-site noise sources associated with the Project would include mechanical equipment and parking facilities. **Table 11**, *On-Site Composite Noise Impacts*, presents the estimated noise from Project-related noise sources in terms of L_{eq}. As indicated in Table 11, the Project would not result in an increase of 5.0 dBA L_{eq} at any receptor. Therefore, the Project would not result in the generation of a substantial permanent increase in ambient noise levels at any receptor in excess of standards established by the City, and the Project's operational composite noise would be less than significant.

Operational Noise Levels at Commercial Land Uses.

For informational purposes only, operational noise levels at nearby commercial land uses as a result of the Project's mechanical equipment, parking structure, and loading/refuse collections areas are presented in **Table 12**, *Operational Noise Levels at Commercial Land Uses*. As shown therein, there would be no perceptible increase in interior noise relative to the ambient noise levels.

5.2.4 Off-Site Existing (2025) Project Related Traffic Noise

Existing roadway noise levels were calculated along various roadway segments near the Project Site. Roadway noise attributable to the Project was evaluated using the TeNS method based on the roadway traffic volume data provided in the Transportation Study prepared for the Project and was compared to baseline noise levels that would occur under the "No Project" condition. Project impacts are shown in **Table 13**, *Off-Site Traffic Noise Impacts – Existing (2025) Plus Project Conditions*, with supporting calculation files attached hereto as Appendix A.

a Calculated based on existing traffic volumes.

SOURCE: ESA, 2025.

As indicated in Table 13, the maximum increase in Project-related traffic noise levels over existing traffic noise levels would be 1.8 dBA CNEL, which would occur along Buckingham Parkway between Slauson Avenue and Hannum Avenue. This increase in noise level would be below a “clearly noticeable” increase of 3 dBA CNEL in an area characterized by normally acceptable noise levels that would remain below 55 dBA CNEL or conditionally acceptable noise levels that would remain below 70 dBA CNEL. The increase in sound level would be lower at the remaining roadway segments analyzed. Therefore, Project-related noise increases would be less than the applicable threshold and therefore less than significant, and no mitigation measures would be required.

5.2.5 Off-Site Future (2029) Project Related Traffic Noise

Future off-site traffic-generated noise impacts were assessed based on a comparison of the future base traffic volumes with the Project to the future year (2029) base traffic volumes without the Project. The results of that comparison are provided in **Table 14**, *Off-Site Traffic Noise Impacts – Future (2029) Plus Project Conditions*. Table 14 shows the Project’s contribution to the future noise levels. The maximum cumulative noise increase from the Project plus related Project traffic would be 1.3 dBA CNEL, which would occur along Buckingham Parkway between Slauson Avenue and Hannum Avenue. This increase in sound level would not exceed the significance thresholds of an increase of 3 dBA CNEL in an area characterized by conditionally acceptable noise levels that would remain below 70 dBA CNEL. The increase in sound level would be lower at the remaining roadway segments analyzed. Therefore, Project-related noise increases would be less than the applicable threshold and therefore less than significant, and no mitigation measures would be required.

5.3 Groundborne Vibration (NOISE-2)

5.3.1 Construction Vibration

Building Damage

Construction activities can generate varying degrees of ground vibration, depending on the construction procedures and the construction equipment used. The operation of construction equipment generates vibrations that spread through the ground and diminish in amplitude with distance from the source. The effect on buildings located in the vicinity of the construction site varies depending on soil type, ground strata, and construction characteristics of the receptor buildings. The results from vibration can range from no perceptible effects at the lowest vibration levels, to low rumbling sounds and perceptible vibration at moderate levels, to slight damage at the highest levels. Groundborne vibration from construction activities rarely reaches levels that damage structures. The PPV for construction equipment pieces anticipated to be used during Project construction are listed in **Table 15**, *Typical Vibration Velocities for Potential Project Construction Equipment.*

TABLE 15
TYPICAL VIBRATION VELOCITIES FOR POTENTIAL PROJECT CONSTRUCTION EQUIPMENT

Equipment	Reference Vibration Velocity Levels at 25 feet, PPV (inch/second) and RMS velocity in decibel (VdB)[a]
Large bulldozer	0.089 PPV (in/sec) / 87 VdB
Loaded Trucks	0.076 PPV (in/sec) / 86 VdB
Wheel Loader	0.076 PPV (in/sec) / 86 VdB
Forklift	0.047 PPV (in/sec) / 81 VdB
Jackhammer	0.035 PPV (in/sec) / 79 VdB
Earth Mover	0.011 PPV (in//sec) / 69 VdB
Small Bulldozer	0.003 PPV (in/sec) / 58 VdB

NOTES:
[a] PPV = Peak particle velocity.

TABLE 16
CONSTRUCTION VIBRATION IMPACTS – STRUCTURAL DAMAGE AT NEAREST STRUCTURE

Maximum Impacted Off-Site Structure	Distance to Source[a]	Highest Estimated Vibration Velocity Levels at the Nearest Off-Site Structures from the Equipment in Table 16 (in/sec PPV)	Highest Estimated Vibration Velocity Levels at the Nearest Off-Site Structures from the Equipment in Table 16 (RMS VdB)	Structural Damage (in/sec PPV) / Human Annoyance Significance Threshold	Exceed Significance Thresholds?
R1/R2/R3 – Sensitive Receptors	100 feet	0.011 – Large Bulldozer	75 – Large Bulldozer	0.2 PPV / 80 VdB	No
R4 – Commercial Properties to the West	35 feet	0.054 – Large Bulldozer	84 – Large Bulldozer	0.5 PPV / NA	No

SOURCE: FTA, Transit Noise and Vibration Impact Assessment Manual, 2018; ESA, 2025

Construction of the Project would generate groundborne construction vibration during demolition and excavation activities. A summary of the highest construction vibration impacts is provided in **Table 16**, *Construction Vibration Impacts – Structural Damage at Nearest Structure*. Sensitive Receptor R4 (the nearest vibration-sensitive receptor susceptible to structural damage) is located 35 feet to the west of the Project Site when measured up to the façade of the receptor from the façade of the existing buildings, which is evaluated as a Class I structure with a vibration damage significance threshold of 0.5-inch-per-second.[23] As shown in Table 16, the highest vibration levels anticipated from a large bulldozer at R4 would not exceed the 0.5 PPV-inch-per-second threshold and would not exceed the vibration building damage threshold. Sensitive Receptors R1, R2, and R3 are not historic and are thus evaluated as Class III structures, which have a vibration damage significance threshold of 0.2-inch-per-second.[24] As shown in Table 16, the highest vibration levels anticipated from a large bulldozer at R1, R2, and R3 would not exceed the 0.2 PPV-inch-per-second threshold and would not exceed the vibration building damage threshold.

Human Annoyance

The CEQA Thresholds Guide identifies residences, schools, motels and hotels, libraries, religious institutions, hospitals, nursing homes, and parks as sensitive uses. Off-site non-residential uses such as retail and commercial uses are not considered vibration-sensitive receptors for human annoyance under CEQA. Groundborne noise specifically refers to the rumbling noise emanating from the motion of building room surfaces due to vibration of floors and walls and is perceptible only inside buildings.[25] For typical buildings, groundborne vibration results in groundborne noise levels approximately 25 to 40 decibels lower than the velocity level.[26]

The closest vibration-sensitive uses for potential human annoyance to the Project Site are the residences approximately 100 feet from the Project Site, with other residential structures at greater distances. At a distance of 100 feet or more, the maximum vibration level would be attenuated by 75 VdB or less. The

[25] Federal Transit Administration, Noise and Vibration Manual, 2018, Page 112,

[26] Federal Transit Administration, Noise and Vibration Manual, 2018, Page 119.

Project would generate occasional transient vibrations from periodic construction but would not generate continuous or permanent vibrations. Thus, Project construction would not exceed the FTA's 75 VdB threshold for occasional events at the nearest human annoyance vibration-sensitive receptor locations during daytime hours. In addition, construction vibration-generation activities would not occur during the nighttime hours when people normally sleep. Compliance with Chapter 9.07 of the CCMC would eliminate the potential for groundborne vibration and groundborne noise human annoyance impacts at the nearby residential uses during sensitive nighttime hours. Thus, impacts would be less than significant.

5.3.2 Operational Vibration

The Project's operations would include typical residential-grade stationary mechanical and electrical equipment for the proposed building, such as air handling units, condenser units, and exhaust fans, which would produce some vibration. Groundborne vibration generated by each of the above-mentioned activities would generate approximately up to 0.005 inch-per-second PPV adjacent to the Project Site.[27] The potential vibration levels from Project operational sources at the closest sensitive receptor locations would be less than the threshold of perceptibility of 0.01 inch-per-second PPV. As such, vibration impacts associated with operation of the Project would be below the significance threshold for both building damage and human annoyance, and thus impacts would be less than significant.

5.4 Airport Noise (NOISE-3)

The nearest airport to the Project is the Los Angeles International Airport (LAX) which is approximately 2.5 miles southwest of the Project site. Airport operations would not impede those working or residing on the Project Site, and the Project Site is located outside of the 65 dBA CNEL contour from LAX flight operations. Therefore, noise from the airport would not impede residents or workers at the Proposed Project Site. Thus, impacts would be less than significant.

[27] Federal Transit Administration, Noise and Vibration Manual, 2018, Figure 5-4. Value is converted from VdB to in/sec PPV.

SECTION 6
Cumulative Impacts

6.1 Construction

According to CEQA Guidelines Section 15300.2(b), cumulative impacts may occur if the impact of successive projects of the same type in the same place, over time is significant. As discussed above, the Project would result in a less than significant impact for construction with the implementation of PDF-NOI-1 and PDF-NOI-2. However, cumulative construction impacts could occur if multiple construction projects occur simultaneously with the proposed Project. If this occurred, the cumulative noise levels would be intermittent, temporary, and would cease at the end of the respective construction periods. It is not likely that maximum construction noise impacts from related projects would occur simultaneously, as sound levels vary from day to day depending on the construction activity performed that day and its location on the development site. Although there would be an increase in temporary ambient sound levels, noise from construction activities is localized and would normally only affect the areas within 500 to 1,000 feet from individual construction sites due to the distance noise attenuation rate of 6 dBA per doubling of distance.

The nearest related projects to the Project Site would be the 5757 Uplander Project located approximately 700 feet to the southwest of the Project Site, the 5700 Hannum Project located approximately 150 feet southwest of the Project Site, and the 5730 Uplander Project located approximately 750 feet south of the Project Site. Any other related projects are located greater than 1,000 feet from the Project Site. However, the related projects and any projects requiring discretionary approval would be required to conduct their own analysis under CEQA, demonstrate compliance with applicable City noise ordinance standards, and provide mitigation measures, if required. Because construction noise would be attenuated prior to reaching land uses proximate to the Project Site and the City imposes a timeframe limit on construction equipment, cumulative noise from cumulative construction projects, if generated, would not be substantially different than the noise generated by the Project. As such, the Project would not result in a cumulatively considerable construction noise impact.

With regard to off-site construction noise, construction traffic from all related projects would contribute to noise levels on major thoroughfares throughout the region, although the related projects are located in different areas and, to some extent, would have varied haul routes and traffic patterns associated with their construction. As shown in Table 7, the Project would not result in any significant off-site construction noise impacts due to construction trips. The street segment with the highest potential for cumulative impacts due to its proximity to sensitive receptors and location between related projects and the Project Site is Slauson Avenue between Hannum Avenue and Marina Freeway. The Project’s construction vehicle trips would increase existing traffic noise levels by a maximum of 1.7 dBA Leq along Slauson Avenue between Hannum Avenue and Marina Freeway.

If related projects contribute to an increase in construction vehicle trips along the same roadway segments and at the same time as the Project, the cumulative increase in construction traffic noise would be greater and could exceed the significance threshold of 3 dBA Leq. While exact construction schedules and construction truck trips for these related projects are not known, it is conservatively assumed that construction of the related projects could occur at the same time as the Project and could include the number of construction truck trips that would generate noise in excess of the significance threshold. For the purposes of this analysis, the number of construction trucks from related projects that would be needed to exceed the significance threshold is estimated to determine the potential for impacts.

The Slauson Avenue roadway segment between Hannum Avenue and Marina Freeway would have a maximum of up to 80 Project truck trips per hour, which would generate a combined Existing plus Project Construction Traffic noise level of approximately 74.8 dBA Leq (an increase of 1.7 dBA from the Existing baseline traffic noise level 73.1 dBA L_{eq}). To create a significant roadway noise impact, the related projects would need to contribute an additional 120 or more heavy-duty truck trips per hour on the same roadway segment at the same time as the Project, which would generate a combined noise level of approximately 76.1 dBA L_{eq}. This cumulative noise level would be equal to the significance threshold of (73.1 + 3 =) 76.1 dBA on Slauson Avenue between Hannum Avenue and Marina Freeway. However, based on the location of their potential haul routes to/from the 405 Freeway and/or the Marina Freeway and size/scope/characteristics of the related projects, there is not a reasonably foreseeable circumstance where the related projects could contribute an additional 120 trips to any roadway segment at the same time as the Project. Furthermore, any overlapping construction truck activity would be limited via the Project's Construction Management Plan and City-approved Haul Route, whereby the City and contractors of the related projects and the Project would strive to minimize any overlapping truck activity. Based on these considerations, cumulative off-site construction traffic noise impacts would be less than significant.

6.2 Operations

Cumulative noise impacts would occur primarily as a result of increased traffic on local roadways due to operation of the Project and cumulative projects, as traffic is the greatest source of operational noise in the Project area. Cumulative off-site traffic-generated noise impacts were assessed based on a comparison of the cumulative base traffic volumes with the Project to the cumulative year (2045) base traffic volumes without the Project. The results of that comparison are provided in **Table 17**, *Off-Site Traffic Noise Impacts – Cumulative (2045) Plus Project Conditions*. Table 17 shows the Project's contribution to the future noise levels. The maximum cumulative noise increase from the Project plus related Project traffic would be 1.1 dBA CNEL, which would occur along Buckingham Parkway between Slauson Avenue and Hannum Avenue. This increase in sound level would not exceed the significance thresholds of an increase of 3 dBA CNEL in an area characterized by conditionally acceptable noise levels that would remain below 70 dBA CNEL. The increase in sound level would be lower at the remaining roadway segments analyzed. Therefore, Project-related noise increases would not result in a cumulatively considerable impact, and impacts would be less than significant.

[a] Calculated based on existing traffic volumes.

SOURCE: ESA, 2025.

Stationary-source noise is generally localized to the immediate area. The Project's stationary noise sources (i.e., fixed mechanical equipment and parking activity) would not contribute to a perceptible increase in ambient noise levels at adjacent properties and would not exceed City standards. Although each related project could potentially impact an adjacent sensitive use, that potential impact would be localized to that specific area and would not contribute to cumulative noise conditions at or adjacent to the proposed Project Site. Additionally, PDF-NOI-3 would ensure the Project's compliance with City standards. Therefore, cumulative stationary source noise would be less than significant. As the Project's contribution to cumulative traffic impacts and stationary-source noise impacts would not be cumulatively considerable, cumulative operational noise impacts would be less than significant.

6.3 Groundborne Vibration

Due to rapid attenuation characteristics of groundborne vibration, only related projects located adjacent to the same sensitive receptors would result in cumulatively considerable vibration impacts. It is unusual for groundborne vibration from sources such as rubber-tired trucks to be perceptible, even in locations close to major roads, unless the road surface is rough with uneven spaces. Several related projects are in locations that could potentially lead construction traffic, including truck traffic near sensitive vibration receptors. Should construction of the Project and related projects overlap, there is a potential for there to be cumulative vibration impacts to vibration-sensitive receptors. As discussed above, construction of the Project, both on-site and off-site, would not result in significant vibration impacts related to structural damage or human annoyance. Therefore, cumulative off-site construction vibration impacts would be less than significant.

Due to the rapid attenuation characteristics of groundborne vibration and the distance between each of the related projects and the Project Site, there is no potential for cumulative operational impacts with respect to groundborne vibration. As such, the Project's contribution to impacts related to groundborne vibration during operation would not be cumulatively considerable. Therefore, cumulative impacts would be less than significant.

SECTION 7
Summary of Results

Noise and vibration levels associated with the Project have been evaluated to determine the level of impact from construction activities and future operations of the Project.

7.1 Construction

Construction of the Project has the potential to generate an increase in temporary or periodic noise through the use of heavy-duty construction equipment and through vehicle trips generated from construction workers traveling to and from the Project Site. However, compliance with the City's Noise Ordinance and applicable policies from the General Plan would minimize the potential for noise generation. As shown in Table 5, noise from construction of the Project would not exceed the City's standards with the implementation of PDF-NOI-1 and PDF-NOI-2. Therefore, impacts related to construction noise would be less than significant.

Additionally, as shown in Table 16, vibration levels at nearby sensitive receptors would be below the significant thresholds for vibration annoyance to humans and structural damage. As a result, construction vibration impacts would be less than significant.

7.2 Operation

Project operations would generate an increase in ambient noise from roadway traffic and stationary noise. The Project would not result in a substantial increase in roadway traffic noise and would not exceed the significance thresholds. Stationary noise sources would be designed in accordance with City standards and would not exceed the allowable noise levels. To ensure compliance with City standards, PDF-NOI-3 and PDF-NOI-4 would be implemented to reduce mechanical and amplified sound from the Project. As a result, operational noise impacts would be less than significant.

The Project's operations would include typical commercial-grade stationary mechanical and electrical equipment, such as air handling units, condenser units, and exhaust fans, which would produce vibration. In addition, the primary sources of transient vibration would include passenger vehicle circulation within the local streets. The potential vibration levels from Project operational sources at the closest existing and future sensitive receptor locations would be less than the significance threshold. As a result, operational vibration impacts would be less than significant.

100 Corporate Pointe Project

Vibration Level Calculations

Based on Federal Transit Administration, Office of Planning and Environment

N =	1.5

Construction Equipment	Project Equipment	Equipment Velocity Decibels @ 25 Feet* (VdB)	Equipment Peak Particle Velocity @ 25 Feet* (inches/second)	Distance to Receptor for < 0.5 PPV (Feet)	Estimated Velocity Decibels @ Distance** (VdB)	Estimated Peak Particle Velocity @ Distance*** (inches/second)
Unmitigated Vibration Levels						
Large Bulldozer	Yes	87	0.089	35	84	0.054
Loaded Trucks	Yes	86	0.076	35	83	0.046
Wheel Loader	Yes	86	0.076	35	83	0.046
Fork Lift	Yes	81	0.047	35	78	0.028
Jackhammer	Yes	79	0.035	35	76	0.021
Earth Mover	Yes	69	0.011	35	66	0.007
Small Bulldozer	Yes	58	0.003	35	55	0.0018

Source:

Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual,* 2018.

Notes:

* Values taken from Table 7-4.

** Based on the formula VdB = 20 x LOG10 (v/v_{ref}), where v_{ref} is equal to 1×10^{-6} in/sec (see page 111).

The approximate rms vibration velocity level (v) is calculated from PPV using a crest factor of 4 (see page 184).

*** Based on the formula PPV(D) = PPV(25 ft) x $(25/D)^N$, where D is equal to the distance (see page 185).

N = soil type classification factor (typically ranges from 1 to 1.5)

Reference Distance	5	ft
Distance to Receptor	35	ft
	-17	dBA
	65.0	dBA
Noise Reduction by		
Building/Enclosure of HVAC	5	dBA
Noise Levels at R4	**60.0**	dBA

* Exterior reference noise levels for air condenser units, fans, and related equipment, the primary sources of noise from fixed mechanical equipment, would be 81.9 dBA Leq measured at a distance of 5 feet (based on noise data from large shopping center projects in Southern California). Refer to: City of Moreno Valley, Moreno Valley Walmart Noise Impact Analysis, Table 9-1, Page 71, February 10, 2015; and City of Pomona, Pomona Ranch Plaza Walmart Expansion Project, Table 4.4-5, Pg. 4.4-33, August 2014.

** Distance to receptors assumes that mechanical equipment would be located on the rooftop of the nearest Project Building.

***Assumes noise from the closest Project building mechanical equiment to each receptor

Project: 100 Corporate Pointe

Parking Structure Noise

Receptor Location	R1	
Parking Structure Noise Level	48.2	dBA
Reference Distance	50	ft
Distance to Receptor	100	ft
	-6	dBA
	42.2	dBA
Noise Reduction by Existing Buildings	0	dBA
Noise Levels at R1	**42**	dBA

Receptor Location	R2	
Parking Structure Noise Level	48.2	dBA
Reference Distance	50	ft
Distance to Receptor	600	ft
	-22	dBA
	26.7	dBA
Noise Reduction by Existing Buildings	15	dBA
Noise Levels at R2	**12**	dBA

Receptor Location	R3	
Parking Structure Noise Level	48.2	dBA
Reference Distance	50	ft
Distance to Receptor	125	ft
	-8	dBA
	40.3	dBA
Noise Reduction by Existing Buildings	0	dBA
Noise Levels at R3	**40.3**	dBA

Receptor Location	R4	
Parking Structure Noise Level	48.2	dBA
Reference Distance	50	ft
Distance to Receptor	35	ft
	3	dBA
	51.3	dBA
Noise Reduction by Existing Buildings	0	dBA
Noise Levels at R4	**51.3**	dBA

AM or PM Peak Hour Trips	153	trips
Leq	48	dBA

Leq(h) = SELref + 10log(NA/1000) – 35.6

Where: Leq(h) = hourly Leq noise level at 50 feet
SELref (92 dBA SEL) = reference noise level for stationary noise source represented in
NA = number of automobiles per hour

Project: 100 Corporate Pointe

Loading Dock and Trash Collection Area Noise Calculations

Receptor Location	R1	
Loading Dock and Trash Collection		
Area Noise Levels	59.2	dBA
Reference Distance	50	ft
Distance to Receptor	100	ft
	-6	dBA
	53.2	dBA
Noise Reduction by Project buildings		dBA
Noise Reduction by Existing/Proposed Barriers		dBA
Noise Levels at R1	**53.2**	dBA

Receptor Location	R2	
Loading Dock and Trash Collection		
Area Noise Levels	59.2	dBA
Reference Distance	50	ft
Distance to Receptor	600	ft
	-22	dBA
	37.6	dBA
Noise Reduction by Project buildings	15	dBA
Noise Reduction by Existing/Proposed Barriers or Buildings		dBA
Noise Levels at R2	**22.6**	dBA

Receptor Location	R3	
Loading Dock and Trash Collection		
Area Noise Levels	59.2	dBA
Reference Distance	50	ft
Distance to Receptor	125	ft
	-8	dBA
	51.2	dBA
Noise Reduction by Project buildings	10	dBA
Noise Reduction by Existing/Proposed Barriers		dBA
Noise Levels at R3	**41.2**	dBA

Receptor Location	R4	
Loading Dock and Trash Collection		
Area Noise Levels	59.2	dBA
Reference Distance	50	ft
Distance to Receptor	35	ft
	3	dBA
	62.3	dBA
Noise Reduction by Project buildings		dBA
Noise Reduction by Existing/Proposed Barriers		dBA
Noise Levels at R4	**62.3**	dBA

* Reference noise level of 70.5 dBA Leq is combine noise levels of loading dock activity (namely idling semi-trucks and backup alarm beeps) noise levels of approximately 70 dBA Leq and trash compactors noise levels of approxmately 66 dBA Leq.

EXECUTIVE SUMMARY
Air Quality Technical Report

The purpose of this Air Quality Technical Report is to assess and discuss the impacts of potential air quality emission impacts that may occur with the implementation of the proposed 100 Corporate Pointe Project (Project). The Project Site would construct a mixed-use multi-family residential and commercial development within Culver City (City). The Project proposes to demolish the existing office building and associated parking and construct a five- to seven-story multi-family affordable residential development inclusive of 351 residential housing units, a six-story parking structure, common open space, and landscaping.

This report describes the existing air quality in the vicinity of the Project limits, estimates future air pollutant emissions resulting from construction and operation of the Project, and identifies the potential for significant impacts based on applicable thresholds of significance. Calculation worksheets and technical data used in this analysis are provided in Appendix A of this report. The findings of the analyses are as follows:

- The incremental increase in regional emissions from construction of the Project would not exceed the regional significance thresholds for criteria pollutants set forth by the South Coast Air Quality Management District (SCAQMD). Thus, construction of the Project would not result in a regional violation of applicable air quality standards or jeopardize the timely attainment of such standards in the South Coast Air Basin (the Air Basin).
- The increase in on-site emissions from construction of the Project would not exceed the localized significance thresholds set forth by the SCAQMD. Thus, construction of the Project would not result in a localized violation of applicable air quality standards or expose off-site receptors to substantial levels of regulated air contaminants.
- The incremental increase in regional emissions from operation of the Project would not exceed the regional significance thresholds set forth by the SCAQMD. Thus, operation of the Project would not result in a regional violation of applicable air quality standards or jeopardize the timely attainment of such standards in the Air Basin.
- The increase in on-site emissions from operation of the Project would not exceed the localized significance thresholds set forth by the SCAQMD. Thus, operation of the Project would not result in a localized violation of applicable air quality standards or expose off-site receptors to substantial levels of regulated air contaminants.
- Emissions from the increase in traffic due to operation of the Project would not have a significant impact upon 1-hour or 8-hour local carbon monoxide (CO) concentrations due to mobile source emissions. Thus, the Project would not result in a localized violation of CO air quality standards or expose off-site receptors to substantial levels of CO emissions.
- Construction of the Project would not generate emissions of toxic air contaminants (TAC) that would exceed the SCAQMD health risk significance threshold of an incremental increase in

cancer risk of 10 in one million. Thus, construction of the Project would not expose off-site receptors to substantial levels of regulated air contaminants.

- Operation of the Project would not generate TAC emissions that would exceed the SCAQMD health risk significance threshold of an incremental increase in cancer risk of 10 in one million. Thus, operation of the Project would not expose off-site receptors to substantial levels of regulated air contaminants.
- Construction and operation of the Project would not result in the generation of odors affecting a substantial number of people. Therefore, odor impacts would be less than significant.
- The Project would not conflict with applicable strategies in the SCAQMD Air Quality Management Plan and would not exceed growth projections for the area. The Project would not result in a significant cumulative air quality impact.

SECTION 1
Introduction

The proposed Project is located at 100-101 Corporate Pointe Walk (Project Site) and is currently occupied by an existing office building, a surface parking lot, a parking garage, and landscaping. The Project would construct a five- to seven-story, mixed-use development consisting of approximately 351 residential units (including 30 affordable units), approximately 4,742 sf of commercial/retail space, a six-story parking structure, open space, and landscaping. Construction is anticipated to begin as early as the second quarter of 2026 with completion anticipated to occur by the first quarter of 2029.

This Air Quality Technical Report evaluates the Project's potential impacts from air quality emissions as well as its potential cumulative impacts. The Project is evaluated in accordance with requirements under the California Environmental Quality Act (CEQA). This Air Quality analysis describes and evaluates the pollutant emission and related air quality impacts that could result from construction and operation of the Project. This report contains: (1) a description of the existing land uses as they pertain to air emissions; (2) a summary of the federal, State, and local regulations related to air quality, including those set forth within the SCAQMD Air Quality Management Plan (AQMP), and applicable City plans; and (3) an analysis of the potential impacts related to air quality associated with the implementation of the Project, as well as identification of potentially feasible measures that could mitigate significant impacts.

The objectives of this technical report are to:

1. Describe the existing environment and regulatory framework for the Project;
2. Evaluate the Project's construction and operational-related emissions and the potential for significant impacts; and
3. For identified significant impacts, provide feasible mitigation measures to reduce impacts.

The analysis was developed based on a mixture of Project-specific as well as default construction and operational characteristics of the Project, as discussed in the methodology portion of Section 3. Calculations and modeling outputs are included in Appendix A.

1.1 Project Location

The Project Site is an approximately 195,796 square foot (sf) (4.49 acre) property generally located at 100-101 Corporate Pointe Walk, Culver City, CA 90230. The Project Site is identified by Assessor's Parcel Numbers (APN) 4134-020-023 and 4134-020-020. **Figure 1**, *Regional and Local Vicinity*, illustrates the Project Site location.

1.2 Existing Site Conditions

The Project Site is currently developed with a 112,276 sf office building, surface parking, a three0-level parking garage, and landscaping on a 4.49-acre lot. The parking lot itself does not generate air pollutant emissions; however, commercial mobile emissions and maintenance of the landscaped areas generate air pollutant emissions.

1.3 Project Description

The Project would demolish the existing office building and parking facilities and construct a mixed-use residential and commercial/retail development. The Project would develop 351 residential units, including 30 affordable housing units, within a five- to seven-story multi-family affordable residential development. Proposed amenities include courtyards, a pool, gym/work spaces, community rooms, and rooftop decks. The Project would also include 524 vehicle parking spaces (of which 211 would be either electric-vehicle (EV) ready, EV-capable, or full EV parking spaces), 104 bicycle parking spaces, and more than 39,000 sf of landscaping. **Figure 2**, *Proposed Site Plan*, illustrates the proposed site layout for the Project.

1.4 Project Construction

Construction of the Project is estimated to last approximately 29 months, tentatively scheduled to begin in the second quarter of 2026 and conclude by the first quarter of 2029. Construction activities are anticipated to occur within the City's permitted hours of 8:00 AM to 8:00 PM Monday through Friday, 9:00 AM to 7:00 PM on Saturdays, and 10:00 AM to 7:00 PM on Sundays. Additionally, the Project is requesting extended construction hours, which if approved by the City, would allow the Project's construction to begin at 7:00 a.m. daily on Monday through Friday and 8:00 a.m. daily on Saturdays for the entire duration of construction (i.e., one-hour earlier Monday through Saturday than specified in Chapter 9.07 of the CCMC). Construction is not anticipated on Sunday. Construction duration by phase is provided in **Table 1**, *Estimated Construction Schedule.*

The provided schedule is an assumption of schedule and, while phases will likely maintain the total number of construction days, the start and end dates may shift. The duration of construction activity and associated equipment represents a reasonable approximation of the expected construction fleet, as required per CEQA guidelines. Site-specific construction fleet may vary due to specific project needs at the time of construction. The duration of construction activity and associated construction equipment was estimated based on consultation with the Project applicant.

SOURCE: Culver City, 2025, in consultation with the Applicant.

The emissions are estimated based on the earliest potential construction schedule to provide a worst case, conservative emissions estimate. If Project construction were to commence at a later date than indicated, it is anticipated that emissions may be reduced due to the State required timed phase-in of cleaner equipment and vehicles.

1.5 Air Quality Fundamentals

1.5.1 Air Quality

Criteria Pollutants

Certain air pollutants have been recognized to cause notable health problems and consequential damage to the environment either directly or in reaction with other pollutants due to their presence in elevated concentrations in the atmosphere. Such pollutants have been identified and regulated as part of the overall endeavor to prevent further deterioration and facilitate improvement in air quality. The following pollutants are regulated by the United States Environmental Protection Agency (USEPA) and are subject to emissions control requirements adopted by federal, state, and local regulatory agencies. These pollutants are referred to as “criteria air pollutants” as a result of the specific standards, or criteria, which have been adopted for them. A description of the health effects of these criteria air pollutants are provided below.

Ozone (O_3). Ozone is a secondary pollutant formed by the chemical reaction of volatile organic compounds (VOCs) and nitrogen oxides (NO_X) in the presence of sunlight under favorable meteorological conditions, such as high temperature and stagnation episodes. Ozone concentrations are generally highest during the summer months when direct sunlight, light wind, and warm temperature conditions are favorable. According to the USEPA, ozone can cause the muscles in the airways to constrict, potentially leading to wheezing and shortness of breath.[1] Ozone can make it more difficult to breathe deeply and vigorously; cause shortness of breath and pain when taking a deep breath; cause coughing and sore or scratchy throat; inflame and damage the airways; aggravate lung diseases such as asthma, emphysema, and chronic bronchitis; increase the frequency of asthma attacks; make the lungs more susceptible to infection; continue to damage the lungs even when the symptoms have disappeared; and cause chronic obstructive pulmonary disease.[2] Long-term exposure to ozone is linked to aggravation of asthma and is likely to be one of many causes of asthma development, and long-term exposures to higher concentrations of ozone may also be linked to permanent lung damage, such as abnormal lung development in children.[3] According to the California Air Resource Board (CARB), inhalation of ozone causes inflammation and irritation of the tissues lining human airways, causing and worsening a variety of symptoms and exposure to ozone can reduce the volume of air that the lungs breathe in and cause shortness of breath.[4]

The USEPA states that people most at risk from breathing air containing ozone include people with asthma, children, older adults, and people who are active outdoors, especially outdoor workers.[5] Children are at greatest risk from exposure to ozone because their lungs are still developing and they are more likely to be active outdoors when ozone levels are high, which increases their exposure.[6] According to CARB, studies show that children are no more or less likely to suffer harmful effects than adults; however, children and teens may be more susceptible to ozone and other pollutants because they spend nearly twice as much time outdoors and engaged in vigorous activities compared to adults.[7] Children breathe more rapidly than adults and inhale more pollution per pound of their body weight than adults and are less likely than adults to notice their own symptoms and avoid harmful exposures.[8] Further research may be able to better distinguish between health effects in children and adults.[9]

Volatile Organic Compounds (VOCs). VOCs are organic chemical compounds of carbon and are not "criteria" pollutants themselves; however, in combination with NO_X, they form ozone and are regulated to prevent the formation of ozone.[10] According to CARB, some VOCs are highly reactive and play a critical role in the formation of ozone, other VOCs have adverse health effects, and in some cases, VOCs can be both highly reactive and have adverse health effects.[11] VOCs are typically formed from combustion of fuels and/or released through evaporation of organic liquids, internal

combustion associated with motor vehicle usage, and consumer products (e.g., architectural coatings, etc.).[12]

Nitrogen Dioxide (NO_2) and Nitrogen Oxides (NO_X). NO_X is a term that refers to a group of compounds containing nitrogen and oxygen. The primary compounds of air quality concern include NO_2 and nitric oxide (NO). Ambient air quality standards have been promulgated for NO_2, which is a reddish-brown, reactive gas.[13] The principle form of NO_X produced by combustion is NO, but NO reacts quickly in the atmosphere to form NO_2, creating the mixture of NO and NO_2 referred to as NO_X.[14] Major sources of NO_X include emissions from cars, trucks and buses, power plants, and off-road equipment.[15] The terms NO_X and NO_2 are sometimes used interchangeably. However, the term NO_X is typically used when discussing emissions, usually from combustion-related activities, and the term NO_2 is typically used when discussing ambient air quality standards. Where NO_X emissions are discussed in the context of the thresholds of significance or impact analyses, the discussions are based on the conservative assumption that all NO_X emissions would oxidize in the atmosphere to form NO_2.

According to the USEPA, short-term exposures to NO_2 can potentially aggravate respiratory diseases, particularly asthma, leading to respiratory symptoms (such as coughing, wheezing, or difficulty breathing), hospital admissions, and visits to emergency rooms, while longer exposures to elevated concentrations of NO_2 may contribute to the development of asthma and potentially increase susceptibility to respiratory infections.[16] According to CARB, controlled human exposure studies show that NO_2 exposure can intensify responses to allergens in allergic asthmatics.[17] In addition, a number of epidemiological studies have demonstrated associations between NO_2 exposure and premature death, cardiopulmonary effects, decreased lung function growth in children, respiratory symptoms, emergency room visits for asthma, and intensified allergic responses.[18] Infants and children are particularly at risk from exposure to NO_2 because they have disproportionately higher exposure to NO_2 than adults due to their greater breathing rate for their body weight and their typically greater outdoor exposure duration, while in adults, the greatest risk is to people who have chronic respiratory diseases, such as asthma and chronic obstructive pulmonary disease.[19] CARB states that much of the information on distribution in air, human exposure and dose, and health effects is specifically for NO_2 and there is only limited information for NO and NO_X, as well as large uncertainty in relating health effects to NO or NO_X exposure.[20]

20 Ibid.

Carbon Monoxide (CO): Carbon monoxide (CO) is primarily emitted from combustion processes and motor vehicles due to the incomplete combustion of fuel, such as natural gas, gasoline, or wood, with the majority of outdoor CO emissions from mobile sources.[21] According to the USEPA, breathing air with a high concentration of CO reduces the amount of oxygen that can be transported in the blood stream to critical organs like the heart and brain and at very high levels, which are possible indoors or in other enclosed environments, CO can cause dizziness, confusion, unconsciousness, and death.[22] Very high levels of CO are not likely to occur outdoors; however, when CO levels are elevated outdoors, they can be of particular concern for people with some types of heart disease since these people already have a reduced ability for getting oxygenated blood to their hearts and are especially vulnerable to the effects of CO when exercising or under increased stress.[23] In these situations, short-term exposure to elevated CO may result in reduced oxygen to the heart accompanied by chest pain also known as angina.[24] According to CARB, the most common effects of CO exposure are fatigue, headaches, confusion, and dizziness due to inadequate oxygen delivery to the brain.[25] For people with cardiovascular disease, short-term CO exposure can further reduce their body's already compromised ability to respond to the increased oxygen demands of exercise, exertion, or stress; inadequate oxygen delivery to the heart muscle leads to chest pain and decreased exercise tolerance.[26] Unborn babies, infants, elderly people, and people with anemia or with a history of heart or respiratory disease are most likely to experience health effects with exposure to elevated levels of CO.[27]

Sulfur Dioxide (SO_2). According to the USEPA, the largest source of sulfur dioxide (SO_2) emissions in the atmosphere is the burning of fossil fuels by power plants and other industrial facilities, while smaller sources of SO_2 emissions include industrial processes such as extracting metal from ore; natural sources such as volcanoes; and locomotives, ships and other vehicles, and heavy equipment that burn fuel with a high sulfur content.[28] In 2006, California phased-in the ultra-low-sulfur diesel regulation limiting vehicle diesel fuel to a sulfur content not exceeding 15 parts per million (ppm), down from the previous requirement of 500 ppm, substantially reducing emissions of sulfur from diesel combustion.[29] According to the USEPA, short-term exposures to SO_2 can harm the human respiratory system and make breathing difficult.[30] According to CARB, health effects at levels near the state 1-hour standard are those of asthma exacerbation, including

bronchoconstriction accompanied by symptoms of respiratory irritation such as wheezing, shortness of breath, and chest tightness, especially during exercise or physical activity, and exposure at elevated levels of SO_2 (above 1 ppm) results in increased incidence of pulmonary symptoms and disease, decreased pulmonary function, and increased risk of mortality.[31] Children, the elderly, and those with asthma, cardiovascular disease, or chronic lung disease (such as bronchitis or emphysema) are most likely to experience the adverse effects of SO_2.[32,33]

Particulate Matter (PM10 and PM2.5). Particulate matter air pollution is a mixture of solid particles and liquid droplets found in the air.[34] Some particles, such as dust, dirt, soot, or smoke, are large or dark enough to be seen with the naked eye while other particles are so small they can only be detected using an electron microscope.[35] Particles are defined by their diameter for air quality regulatory purposes: inhalable particles with diameters that are generally 10 micrometers and smaller (PM10); and fine inhalable particles with diameters that are generally 2.5 micrometers and smaller (PM2.5).[36] Thus, PM2.5 comprises a portion or a subset of PM10. Sources of PM10 emissions include dust from construction sites, landfills and agriculture, wildfires and brush/waste burning, industrial sources, and wind-blown dust from open lands.[37] Sources of PM2.5 emissions include combustion of gasoline, oil, diesel fuel, or wood.[38] PM10 and PM2.5 may be either directly emitted from sources (primary particles) or formed in the atmosphere through chemical reactions of gases (secondary particles) such as SO_2, NO_X, and certain organic compounds.[39] According to CARB, both PM10 and PM2.5 can be inhaled, with some depositing throughout the airways; PM10 is more likely to deposit on the surfaces of the larger airways of the upper region of the lung while PM2.5 is more likely to travel into and deposit on the surface of the deeper parts of the lung, which can induce tissue damage and lung inflammation.[40] Short-term (up to 24 hours duration) exposure to PM10 has been associated primarily with worsening of respiratory diseases, including asthma and chronic obstructive pulmonary disease, leading to hospitalization and emergency department visits.[41] The effects of long-term (months or years) exposure to PM10 are less clear, although studies suggest a link between long-term PM10 exposure and respiratory mortality. The International Agency for Research on Cancer published a review in 2015 that concluded that particulate matter in outdoor air pollution causes lung cancer.[42] Short-term exposure to PM2.5 has been associated with premature mortality, increased hospital admissions for heart or lung causes, acute and chronic bronchitis, asthma attacks, emergency room

42 Ibid.

visits, respiratory symptoms, and restricted activity days and long-term exposure to PM2.5 has been linked to premature death, particularly in people who have chronic heart or lung diseases, and reduced lung function growth in children.[43] According to CARB, populations most likely to experience adverse health effects with exposure to PM10 and PM2.5 include older adults with chronic heart or lung disease, children, and asthmatics and children and infants are more susceptible to harm from inhaling pollutants such as PM10 and PM2.5 compared to healthy adults because they inhale more air per pound of body weight than do adults, spend more time outdoors, and have developing immune systems.[44]

Lead (Pb). Major sources of lead emissions include ore and metals processing, piston-engine aircraft operating on leaded aviation fuel, waste incinerators, utilities, and lead-acid battery manufacturers.[45] In the past, leaded gasoline was a major source of lead emissions; however, the removal of lead from gasoline has resulted in a decrease of lead in the air by 98 percent between 1980 and 2014.[46] Lead can adversely affect the nervous system, kidney function, immune system, reproductive and developmental systems and the cardiovascular system, and affects the oxygen carrying capacity of blood.[47] The lead effects most commonly encountered in current populations are neurological effects in children, such as behavioral problems and reduced intelligence, anemia, and liver or kidney damage.[48] Excessive lead exposure in adults can cause reproductive problems in men and women, high blood pressure, kidney disease, digestive problems, nerve disorders, memory and concentration problems, and muscle and joint pain.[49]

Other Criteria Pollutants (California Only)

The California Ambient Air Quality Standards (CAAQS) regulate the same criteria pollutants as the National Ambient Air Quality Standards (NAAQS) but, in addition, regulate State-identified criteria pollutants, including sulfates, hydrogen sulfide, visibility-reducing particles, and vinyl chloride. A description of the health effects of the State-identified criteria air pollutants relevant to the Project is provided below. As the Project would not generate emissions of hydrogen sulfide or vinyl chloride, they are not discussed.

Sulfates (SO_4^{2-}): Sulfates in the environment occur as a result of SO_2 being converted to SO_4^{2-} compounds in the atmosphere where sulfur is first oxidized to SO_2 during the combustion process of sulfur containing, petroleum-derived fuels (e.g., gasoline and diesel fuel).[50] Exposure to SO_4^{2-}, which are part of PM2.5, results in health effects similar to those from exposure to PM2.5 including reduced lung function, aggravated asthmatic symptoms, and increased risk of emergency

department visits, hospitalizations, and death in people who have chronic heart or lung diseases.[51] Population groups with higher risks of experiencing adverse health effects with exposure to SO_4^{2-} include children, asthmatics, and older adults who have chronic heart or lung diseases.[52]

Visibility-Reducing Particles: Visibility-reducing particles come from a variety of natural and manmade sources and can vary greatly in shape, size, and chemical composition. Visibility reduction is caused by the absorption and scattering of light by the particles in the atmosphere before it reaches the observer. Certain visibility-reducing particles are directly emitted to the air, such as windblown dust and soot, while others are formed in the atmosphere through chemical transformations of gaseous pollutants (e.g., sulfates, nitrates, organic carbon particles), which are the major constituents of particulate matter. As the number of visibility reducing particles increases, more light is absorbed and scattered, resulting in less clarity, color, and visual range.[53] Exposure to some haze-causing pollutants have been linked to adverse health impacts similar to PM10 and PM2.5, as discussed above.[54]

Air Toxics

Toxic Air Contaminants

In addition to criteria pollutants, the SCAQMD periodically assesses levels of toxic air contaminants (TACs) in the Air Basin. A TAC is defined by California Health and Safety Code Section 39655:

> *"Toxic air contaminant" means an air pollutant which may cause or contribute to an increase in mortality or in serious illness, or which may pose a present or potential hazard to human health. A substance that is listed as a hazardous air pollutant pursuant to subsection (b) of Section 112 of the federal act (42 U.S.C. Sec. 7412(b)) is a toxic air contaminant.*

Diesel particulate matter, which is emitted in the exhaust from diesel engines, was listed by the State as a toxic air contaminant in 1998. Most major sources of diesel emissions, such as ships, trains, and trucks, operate in and around ports, railyards, and heavily traveled roadways. These areas are often located near highly populated areas resulting in greater health consequences for urban areas than rural areas.[55] Diesel particulate matter has historically been used as a surrogate measure of exposure for all diesel exhaust emissions. Diesel particulate matter consists of fine particles (fine particles have a diameter <2.5 µm), including a subgroup of ultrafine particles (ultrafine particles have a diameter <0.1 µm). Collectively, these particles have a large surface area which makes them an excellent medium for absorbing organics. The visible emissions in diesel exhaust include carbon particles or "soot." Diesel exhaust also contains a variety of harmful gases and cancer-causing substances.

---

51 Ibid.

52 Ibid.

53 California Air Resources Board, 2024i. Visibility-Reducing Particles and Health, https://ww2.arb.ca.gov/resources/visibility-reducing-particles-and-health. Accessed April 2025.

54 Ibid.

55 California Air Resources Board, 2024j. Overview: Diesel Exhaust and Health, https://ww2.arb.ca.gov/resources/overview-diesel-exhaust-and-health. Accessed April 2025.

Exposure to diesel particulate matter may be a health hazard, particularly to children whose lungs are still developing and the elderly who may have other serious health problems. Diesel particulate matter levels and resultant potential health effects may be higher in proximity to heavily traveled roadways with substantial truck traffic or near industrial facilities. According to CARB, diesel particulate matter exposure may lead to the following adverse health effects: (1) Aggravated asthma; (2) Chronic bronchitis; (3) Increased respiratory and cardiovascular hospitalizations; (4) Decreased lung function in children; (5) Lung cancer; and (6) Premature deaths for people with heart or lung disease.[56]

In August 2021, the SCAQMD released the Final Multiple Air Toxics Exposure Study V (MATES V).[57] The MATES V study includes a fixed site monitoring program with ten stations, an updated emissions inventory of TACs, and a modeling effort to characterize risk across the Air Basin. The purpose of the fixed site monitoring is to characterize long-term regional air toxics levels in residential and commercial areas. In addition to new measurements and updated modeling results, several key updates were implemented in MATES V. First, MATES V estimates cancer risks by taking into account multiple exposure pathways, which includes inhalation and non-inhalation pathways. This approach is consistent with how cancer risks are estimated in South Coast AQMD’s programs, such as permitting, Air Toxics Hot Spots (AB2588), and CEQA. Previous MATES studies quantified the cancer risks based on the inhalation pathway only. Second, along with cancer risk estimates, MATES V includes information on the chronic noncancer risks from inhalation and non-inhalation pathways for the first time. Cancer risks and chronic noncancer risks from MATES II through IV measurements have been re-examined using current Office of Environmental Health Hazard Assessment (OEHHA) and CalEPA risk assessment methodologies and modern statistical methods to examine the trends over time. This has led to a reduction of the Air Basin average air toxics cancer risk in MATES V of 455 in one million, compared to MATES IV of 997 in one million.[58] The key takeaways from the MATES V study: air toxics cancer risk has decreased by about 50 percent since MATES IV based on modeling data; MATES V Basin average multi-pathway air toxics cancer risk is 455 in a million, with the highest risk locations being in the Los Angeles International Airport, downtown, and the ports areas; diesel particulate matter is the main risk driver for air toxics cancer risk; goods movement and transportation corridors have the highest air toxics cancer risks; and the chronic noncancer risk was estimated for the first time with a chronic hazard index of approximately 5 to 9 across all ten fixed stations.[59]

Additionally, the SCAQMD has prepared a series of maps that show regional trends in estimated outdoor inhalation cancer risk from toxic emissions, as part of an ongoing effort to provide insight into relative risks. The maps represent the estimated number of potential cancers per million people associated with a lifetime of breathing air toxics (24 hours per day outdoors for 70 years). The background potential cancer risk per million people in the Project Site area is estimated at approximately 636 in one million (compared to an overall Air Basin-wide risk of 455 in one million

58 Ibid.

59 Ibid.

for the average of 10 fixed monitoring sites).[60] Generally, the risk from air toxics is lower near the coastline and increases inland, with higher risks concentrated near large diesel sources (e.g., freeways, airports, and ports).

Diesel Exhaust

Diesel exhaust is composed of two phases, gas and particle, and both phases contribute to the health risk. The gas phase is composed of many of the urban HAPs, such as acetaldehyde, acrolein, benzene, 1,3-butadiene, formaldehyde, and polycyclic aromatic hydrocarbons. The particle phase is also composed of many different types of particles by size or composition. Fine and ultra-fine diesel particulates are of the greatest health concern and may be composed of elemental carbon with adsorbed compounds such as organic compounds, sulfate, nitrate, metals, and other trace elements. Diesel exhaust is emitted from a broad range of diesel engines; the on-road diesel engines of trucks, buses and cars, and the off-road diesel engines that include locomotives, marine vessels, and heavy-duty equipment. Although DPM is emitted by diesel-fueled internal combustion engines, the composition of the emissions varies depending on engine type, operating conditions, fuel composition, lubricating oil, and whether an emission control system is present.

The most common exposure to DPM is breathing air that contains diesel exhaust. The fine and ultra-fine particles are respirable (similar to PM2.5), which means that they can avoid many of the human respiratory system defense mechanisms and enter deeply into the lung. Exposure to DPM comes from both on-road and off-road engine exhaust that is either directly emitted from the engines or lingering in the atmosphere.

Diesel exhaust causes health effects from long-term chronic exposures. The type and severity of health effects depends upon several factors including the amount of chemical exposure and the duration of exposure. Individuals also react differently to different levels of exposure. There is limited information on exposure to only DPM, but there is enough evidence to indicate that inhalation exposure to diesel exhaust causes chronic health effects as well as having cancer-causing potential.

Because it is part of PM2.5, DPM also contributes to the same non-cancer health effects as PM2.5 exposure. These effects include premature death, hospitalizations, and emergency department visits for exacerbated chronic heart and lung disease, including asthma, increased respiratory symptoms, and decreased lung function in children. Several studies suggest that exposure to DPM may also facilitate development of new allergies. Those most vulnerable to non-cancer health effects are children whose lungs are still developing and the elderly who often have chronic health problems.[61]

1.6 Environmental Setting

1.6.1 Regional Air Quality

The Project Site is located within the South Coast Air Basin (Air Basin), which is shown in **Figure 3**, *Boundaries of the South Coast Air Quality Management District*. The Air Basin is an approximately 6,745-square-mile area bounded by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east. The Air Basin consists of Orange County, Los Angeles County (excluding the Antelope Valley portion), and the western, non-desert portions of San Bernardino and Riverside counties, in addition to the San Gorgonio Pass area in Riverside County. The terrain and geographical location determine the distinctive climate of the Air Basin, as it is a coastal plain with connecting broad valleys and low hills.

The Air Basin lies in the semi-permanent high-pressure zone of the eastern Pacific Ocean. The usually mild climatological pattern is interrupted by periods of hot weather, winter storms, or Santa Ana winds. The extent and severity of pollutant concentrations in the Air Basin is a function of the area's natural physical characteristics (weather and topography) and man-made influences (development patterns and lifestyle). Factors such as wind, sunlight, temperature, humidity, rainfall, and topography all affect the accumulation and dispersion of pollutants throughout the Air Basin, making it an area of high pollution potential. The Air Basin's meteorological conditions, in combination with regional topography, are conducive to the formation and retention of ozone, which is a secondary pollutant that forms through photochemical reactions in the atmosphere. Pollutant concentrations in the Air Basin vary with location, season, and time of day. Concentrations of ozone, for example, tend to be lower along the coast, higher in the near inland valleys, and lower in the far inland areas of the Air Basin and adjacent desert.[62] The worst air pollution conditions throughout the Air Basin typically occur from June through September. This condition is generally attributed to the emissions occurring in the Air Basin, light winds, and shallow vertical atmospheric mixing. These factors reduce the potential for pollutant dispersion causing elevated air pollutant levels. Pollutant concentrations in the Air Basin vary with location, season, and time of day. Concentrations of ozone, for example, tend to be lower along the coast, higher in the near inland valleys, and lower in the far inland areas of the Air Basin and adjacent desert.

Attainment Status

California Health and Safety Code section 39607(e) requires CARB to establish and periodically review area designation criteria. **Table 2**, *South Coast Air Basin Attainment Status,* provides a summary of the attainment status for the Air Basin with respect to the federal and State standards. As shown in Table 2, the Air Basin is designated under federal or State ambient air quality standards as nonattainment for ozone, PM10, and fine particulate matter PM2.5.

Hydrogen Sulfide	N/A	Unclassified
Vinyl Chloride	N/A	N/A[c]

N/A = not applicable
[a] The NAAQS for 1-hour ozone was revoked on June 15, 2005, for all areas except Early Action Compact areas.
[b] Partial Nonattainment designation – Los Angeles County portion of the Air Basin only for near-source monitors.
[c] In 1990, CARB identified vinyl chloride as a TAC and determined that it does not have an identifiable threshold. Therefore, CARB does not monitor or make status designations for this pollutant.
[e] In 2024, the USEPA revised the national annual average standard for PM2.5. This was prompted by evidence within new literature that showed continued risk of premature mortality and other health effects at lower PM2.5 concentrations than the previous annual average standard.
SOURCE: USEPA, The Green Book Non-Attainment Areas for Criteria Air Pollutants, https://www.epa.gov/green-book; CARB, Area Designations Maps/State and National, http://www.arb.ca.gov/desig/adm/adm.htm. Accessed April 2025.

It is noteworthy to mention that air quality in the Air Basin has improved substantially over the years, primarily due to the impacts of air quality control programs at the federal, State, and local levels. The ozone and particulate matter levels have fallen significantly compared to the worst years and are expected to continue to trend downward in the future despite increases in the economy and population in the Air Basin.[63]

With respect to the State-identified criteria air pollutants (sulfates, hydrogen sulfide, visibility reducing particles, and vinyl chloride), the Project would either not use these pollutants in the day to day operations or during construction and therefore would not have emissions of those pollutants (hydrogen sulfide, vinyl chloride, and lead), or such emissions would be accounted for as part of the pollutants estimated in this analysis (visibility reducing particles are associated with particulate matter emissions, and sulfates are associated with SO_2). Vinyl chloride is used in the process of making polyvinyl chloride (PVC) plastic and vinyl products and is primarily emitted from industrial processes.[64] The Project will consist of residential and commercial uses and thus its operations will not generate vinyl chloride. Likewise, vinyl chloride would not be emitted directly during Project construction. Therefore, there would be no Project emissions of vinyl chloride. In addition, CARB determined there is not sufficient scientific evidence available to support the identification of a

[63] SCAQMD, 2022 Air Quality Management Plan (AQMP), December 2022.
[64] CARB, 2024k. Vinyl Chloride & Health, https://ww2.arb.ca.gov/resources/vinyl-chloride-and-health. Accessed April 2025.

threshold exposure level for vinyl chloride; therefore, CARB does not monitor or make status designations for this pollutant.[65]

Sources of Emissions

As detailed in the AQMP, the major sources of air pollution in the Air Basin are divided into four major source classifications: point stationary sources, area stationary sources, on-road mobile sources, and off-road mobile sources. Point and area sources are the two major subcategories of stationary sources.[66] Point sources are permitted facilities that contain one or more emission sources at an identified location (e.g., power plants, refineries, emergency generator exhaust stacks). Area sources consist of many small emission sources (e.g., residential water heaters, architectural coatings, and consumer products), which are distributed across the region. Mobile sources consist of two main subcategories: on-road sources (such as cars and trucks) and off-road sources (such as heavy construction equipment).

1.6.2 Local Air Quality

Local Air Quality

Existing Criteria Pollutants Levels at Nearby Monitoring Stations

The SCAQMD maintains a network of air quality monitoring stations located throughout the Air Basin to measure ambient pollutant concentrations. The Project Site is located in SCAQMD SRA 3, Southwest Coastal LA County; therefore, the monitoring station most representative of the Project Site is the Los Angeles-Westchester Parkway monitoring station. However, this station does not have complete data for all years. Data from the West Los Angeles-VA Hospital station (SRA 2) and the Central Los Angeles monitoring station (SRA 1) were used to supplement for missing data. The data from the most recent three-year period available from the SCAQMD for these monitoring stations covers the years 2021 to 2023. The pollutant concentration data for these years are summarized in **Table 3**, *Ambient Air Quality Data.*

Existing Site Emissions

As stated above, the Project Site is currently developed with an existing 112,276 sf office building, a three-story parking garage, and related surface parking. The Project includes demolition of all existing site facilities, including the office building and parking. In order to provide a conservative analysis, no credit is taken for existing operational AQ emissions, and the Project's air quality emissions are conservatively considered new.

Sensitive Receptors and Locations

Certain population groups, such as children, elderly, and acutely and chronically ill persons (especially those with cardio-respiratory diseases), are considered more sensitive to the potential effects of air pollution than others. As a result, certain land uses that are occupied by these population groups, such as residences, hospitals, and schools, are considered to be air quality-sensitive land uses. Sensitive receptors in the vicinity of the Project Site consist of residences to the east and south across Buckingham Parkway. All other air quality-sensitive uses are located at greater distances from the Project Site and would experience lower air pollutant impacts from potential sources of pollutants from the Project Site due to atmospheric dispersion effects.

SECTION 2
Regulatory Setting

This section provides a summary of pertinent federal, State, and local statutes, regulations, plans, and policies that have been adopted that address air quality.

2.1 Federal

2.1.1 Clean Air Act

The Federal Clean Air Act (CAA) of 1963 was the first federal legislation regarding air pollution control and has been amended numerous times in subsequent years, with the most recent amendments occurring in 1990. At the federal level, the USEPA is responsible for implementation of certain portions of the CAA, including mobile source requirements. Other portions of the CAA, such as stationary source requirements, are implemented by state and local agencies.

The CAA establishes federal air quality standards and specifies future dates for achieving compliance. The CAA also mandates that the state submit and implement a State Implementation Plan (SIP) for areas not meeting these standards. SIPs must include pollution control measures that demonstrate how the NAAQS will be met. The 1990 amendments to the CAA identify specific emission-reduction goals for areas not meeting the NAAQS. These amendments require both a demonstration of reasonable further progress toward attainment and incorporation of additional sanctions for failure to attain or to meet interim milestones. The sections of the CAA that are most applicable to the Project include Title I (Nonattainment Provisions).

Title I requirements are implemented for the purpose of attaining NAAQS for the following criteria air pollutants: O_3; NO_2; CO; SO_2; PM10; and lead. The NAAQS were amended in July 1997 to include an 8-hour standard for O_3 and to adopt a NAAQS for PM2.5. The NAAQS were also amended in September 2006 to include an established methodology for calculating PM2.5 as well as revoking the annual PM10 threshold. **Table 4,** *Ambient Air Quality Standards,* shows the NAAQS currently in effect for each criteria air pollutant.

TABLE 4
AMBIENT AIR QUALITY STANDARDS

Pollutant	Average Time	California Standards[a]		National Standards[b]		
		Concentration[c]	Method[d]	Primary[c,e]	Secondary[c,f]	Method[g]
O_3[h]	1 Hour	0.09 ppm (180 µg/m^3)	Ultraviolet Photometry	—	Same as Primary Standard	Ultraviolet Photometry
	8 Hour	0.070 ppm (137 µg/m^3)		0.070 ppm (137 µg/m^3)		
PM10[i]	24 Hour	50 µg/m^3	Gravimetric or Beta Attenuation	150 µg/m^3	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m^3		—		
PM2.5[i]	24 Hour	No Separate State Standard	Gravimetric or Beta Attenuation	35 µg/m^3	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m^3		9.0 µg/m^3	15 µg/m^3	
CO	1 Hour	20 ppm (23 mg/m^3)	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 mg/m^3)	—	Non-Dispersive Infrared Photometry (NDIR)
	8 Hour	9.0 ppm (10mg/m^3)		9 ppm (10 mg/m^3)		
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m^3)		—	—	
NO_2[j]	1 Hour	0.18 ppm (339 µg/m^3)	Gas Phase Chemi-luminescence	100 ppb (188 µg/m^3)	—	Gas Phase Chemi-luminescence
	Annual Arithmetic Mean	0.030 ppm (57 µg/m^3)		53 ppb (100 µg/m^3)	Same as Primary Standard	
SO_2[k]	1 Hour	0.25 ppm (655 µg/m^3)	Ultraviolet Fluorescence	75 ppb (196 µg/m^3)	—	Ultraviolet Fluorescence; Spectrophotometry (Pararosaniline Method)
	3 Hour	—		—	0.5 ppm (1300 µg/m^3)	
	24 Hour	0.04 ppm (105 µg/m^3)		0.14 ppm (for certain areas)[j]	—	
	Annual Arithmetic Mean	—		0.030 ppm (for certain areas)[j]	—

	Rolling 3-Month Average	—		0.15 µg/m^3		

TABLE 4
AMBIENT AIR QUALITY STANDARDS

Pollutant	Average Time	California Standards[a]		National Standards[b]		
		Concentration[c]	Method[d]	Primary[c,e]	Secondary[c,f]	Method[g]
Visibility Reducing Particles[n]	8 Hour	See footnote n	Beta Attenuation and Transmittance through Filter Tape	No Federal Standards		
Sulfates (SO_4)	24 Hour	25 µg/m^3	Ion Chromatography			
Hydrogen Sulfide	1 Hour	0.03 ppm (42 µg/m^3)	Ultraviolet Fluorescence			
Vinyl Chloride[l]	24 Hour	0.01 ppm (26 µg/m^3)	Gas Chromatography			

[a] California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1 and 24 hour), nitrogen dioxide, and particulate matter (PM10, PM2.5, and visibility reducing particles) are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

[b] National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24 hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 µg/m^3 is equal to or less than one. For PM2.5, the 24 hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact the USEPA for further clarification and current national policies.

[c] Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

[d] Any equivalent measurement method which can be shown to the satisfaction of the ARB to give equivalent results at or near the level of the air quality standard may be used.

[e] National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.

[f] National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

[g] Reference method as described by the USEPA. An “equivalent method” of measurement may be used but must have a “consistent relationship to the reference method” and must be approved by the USEPA.

[h] On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.

[i] In 2024, the EPA revised the national annual average standard for PM2.5. This was prompted by evidence within new literature that showed continued risk of premature mortality and other health effects at lower PM2.5 concentrations than the previous annual average standard. The existing national 24-hour PM2.5 standards (primary and secondary) were retained at 35 µg/m^3, as was the annual secondary standard of 15 µg/m^3. The existing 24-hour PM10 standards (primary and secondary) of 150 µg/m^3 also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.

[j] To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 parts per billion (ppb). Note that the national 1-hour standard is in units of ppb. California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards, the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.

[k] On June 2, 2010, a new 1-hour SO2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved. Note that the 1-hour national standard is in units of ppb. California standards are in units of ppm. To directly compare the 1-hour national standard to the California standard, the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.

[l] The CARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

[m] The national standard for lead was revised on October 15, 2008, to a rolling 3-month average. The 1978 lead standard (1.5 µg/m^3 as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.

[n] In 1989, the ARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

2.2 State

California has promulgated a series of executive orders, laws, and regulations aimed at reducing both the level of air pollutants and greenhouse gas (GHG) emissions in the atmosphere and emissions of pollutants from commercial and private activities within the state. The State also has implemented regulations governing energy consumption within the State. The major components of California's initiatives are reviewed below.

2.2.1 California Clean Air Act

The California Clean Air Act (CCAA), signed into law in 1988, requires all areas of the State to achieve and maintain the CAAQS by the earliest practical date. The CAAQS are established to protect the health of the most sensitive groups and apply to the same criteria air pollutants as the federal CAA and also includes State-identified criteria air pollutants, which are sulfates, visibility-reducing particles, hydrogen sulfide, and vinyl chloride. Table 4, provided above, shows the CAAQS currently in effect for each of the federally identified criteria air pollutants as well as state-recognized pollutants, such as sulfates, visibility-reducing particles, hydrogen sulfide, and vinyl chloride. CARB has primary responsibility for ensuring the implementation of the CCAA,[67] responding to the federal CAA planning requirements applicable to the state, and regulating emissions from motor vehicles and consumer products within the state.

Health and Safety Code Section 39607(e) requires CARB to establish and periodically review area designation criteria. The Los Angeles County portion of the Air Basin is designated as nonattainment for the federal lead standard; however, this is due to localized emissions from two lead-acid battery recycling facilities in the City of Vernon and the City of Industry that are no longer operating.[68] The Air Basin is designated as attainment for the California standards for sulfates and unclassified for hydrogen sulfide and visibility-reducing particles. The Air Basin is currently in non-attainment for ozone, PM10, and PM2.5 under the CAAQS. Since vinyl chloride is a carcinogenic toxic air contaminant, CARB does not classify attainment status for this pollutant.

2.2.2 Mobile Source Regulations

Mobile sources are a significant contributor to the air pollution in California. CARB has established exhaust emission standards for automobiles, which are more stringent than the federal emissions standards. Through its Mobile Sources Program, CARB has developed programs and policies to reduce emissions from on-road heavy-duty diesel vehicles. Specifically, the Truck and Bus regulation requires diesel trucks and buses that operate in the State to reduce NO_X, PM10, and PM2.5 emissions (Title 13 California Code of Regulations [CCR], Section 2025). By January 1, 2023, nearly all vehicles were required have engines certified to 2010 model year engines or equivalent. The Innovative Clean Transit Program (ICT) sets emissions reduction standards for new public transit vehicles and requires major transit agencies to only purchase zero emission (ZE) buses after 2029. The Solid Waste Collection Vehicle Regulation requires solid waste collection vehicles and heavy diesel-fueled on-road single engine cranes to be upgraded. The Rule for On-

67 Chapter 1568 of the Statutes of 1988.

68 SCAQMD, Board Meeting, Agenda No. 30, Adopt the 2012 Lead State Implementation Plan for Los Angeles County, May 4, 2012.

Road Heavy-Duty Diesel-Fueled Public and Utility Fleets requires fleets to install emission control devices on vehicles or purchase vehicles that run on alternative fuels or use advanced technologies to achieve emissions requirements by specified implementation dates. CARB also established an In-Use Off-Road Diesel-Fueled Fleets Regulation to impose limits on idling and require fleets to retrofit or replace older engines.

2.2.3 California Air Resources Board

CARB, a part of the California Environmental Protection Agency (Cal/EPA), is responsible for the coordination and administration of both federal and state air pollution control programs within California. In this capacity, CARB conducts research, sets the CAAQS, compiles emission inventories, develops suggested control measures, and provides oversight of local programs. CARB establishes emissions standards for motor vehicles sold in California, consumer products (such as hairspray, aerosol paints, and barbecue lighter fluid), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions. CARB has primary responsibility for the development of California's SIP, for which it works closely with the federal government and the local air districts. The SIP is required for the state to take over implementation of the federal CAA from the USEPA.

On-Road and Off-Road Vehicle Rules

In 2004, CARB adopted an Airborne Toxic Control Measure (ATCM) to limit heavy-duty diesel motor vehicle idling in order to reduce public exposure to DPM and other TACs. The measure applies to diesel-fueled commercial vehicles with gross vehicle weight ratings greater than 10,000 pounds that are licensed to operate on highways, regardless of where they are registered. This measure does not allow diesel-fueled commercial vehicles to idle for more than 5 minutes at any given time.

In 2008, CARB approved the Truck and Bus regulation to reduce NO_X, PM10, and PM2.5 emissions from existing diesel vehicles operating in California. The requirements were amended in December 2010 and apply to nearly all diesel fueled trucks and busses with a gross vehicle weight rating greater than 14,000 pounds. For the largest trucks in the fleet, those with a Gross Vehicle Weight Rating (GVWR) greater than 26,000 pounds must comply with a schedule by engine model year or owners can report to show compliance with more flexible options, such as the installation of DPM filters or low-use exemption.

In addition to limiting exhaust from idling trucks, CARB also promulgated emission standards for off-road diesel construction equipment of greater than 25 horsepower (hp), such as bulldozers, loaders, backhoes, and forklifts, as well as many other self-propelled off-road diesel vehicles. The In-Use Off-Road Diesel Fueled Fleets regulation adopted by CARB on July 26, 2007, aims to reduce emissions by the installation of DPM filters and encouraging the retirement, replacement, or repower of older, dirtier engines with newer emission-controlled models (13 CCR, Section 2449). The compliance schedule required that equipment turn overs or retrofits be fully implemented by 2023 in all equipment for large and medium fleets and by 2028 for small fleets.

Advanced Clean Car Program

The Advanced Clean Cars emissions-control program was adopted by CARB in 2012 and is closely associated with other state-led emissions standards for passenger vehicles and light-duty trucks.[69] The program requires a greater number of ZEV models for years 2015 through 2025 to control smog, soot, and GHG emissions. This program includes the Low-Emissions Vehicle regulations to reduce criteria pollutants and GHG emissions from light- and medium-duty vehicles; and the ZEV regulations to require manufactures to produce an increasing number of pure ZEVs (meaning battery and fuel cell electric vehicles) with the provision to produce plug-in hybrid electric vehicles between 2018 and 2025.

Executive Order No. N-79-20 (adopted in September 2020) phases out the sales of new gasoline-fueled passenger cars by 2035 in California with an additional 10-year transition period for heavy vehicles. The State would not restrict used car sales, nor forbid residents from owning gas-powered vehicles. In accordance with the Executive Order, CARB is developing a 2020 Mobile Source Strategy, a comprehensive analysis that presents scenarios for possible strategies to reduce the carbon, toxic, and unhealthy pollution from cars, trucks, equipment, and ships. The strategies will provide important information for numerous regulations and incentive programs going forward by conveying what is necessary to address the aggressive emission reduction requirements.

The primary mechanism for achieving the ZEV target for passenger cars and light trucks is CARB's Advanced Clean Cars II (ACC II) Program.[70] The ACC II regulations will rapidly scale down light-duty passenger car, pickup truck, and SUV emissions starting with the 2026 model year through 2035. The ACC II regulation amends the Zero-emission Vehicle Regulation to require an increasing number of zero-emission vehicles and relies on currently available advanced vehicle technologies, including battery-electric, hydrogen fuel cell electric, and plug-in hybrid electric-vehicles, to meet air quality and climate change emissions standards, which supports Executive Order N-79-20 that requires all new passenger vehicles sold in California to be zero emissions by 2035. Additionally, the ACC II regulation amends the Low-emission Vehicle Regulations to include increasingly stringent standards for gasoline cars and heavier passenger trucks to continue to reduce smog-forming emissions.

69 CARB, Clean Car Standards – Pavley, Assembly Bill 1493.

70 CARB, Advanced Clean Cars II. https://ww2.arb.ca.gov/our-work/programs/advanced-clean-cars-program/advanced-clean-cars-ii. Accessed April 2025.

Advanced Clean Trucks Program

The Advanced Clean Trucks regulations were approved on June 25, 2020, and require that manufacturers sell zero-emissions or near-zero-emissions trucks as an increasing percentage of their annual California sales beginning in 2024. The goal of this proposed strategy is to achieve nitrogen oxide (NOx) and GHG emission reductions through advanced clean technology and to increase the penetration of the first wave of zero-emissions heavy-duty technology into applications that are well suited to its use. According to CARB, "Promoting the development and use of advanced clean trucks will help CARB achieve its emission reduction strategies as outlined in the SIP, Sustainable Freight Action Plan, SB 350, and AB 32."[71] The percentage of zero-emissions truck sales is required to increase every year until 2035 when sales would need to be 55 percent of Classes 2b–3 (light/medium- and medium-duty trucks) truck sales, 75 percent of Classes 4–8 (medium- to heavy-duty trucks) straight truck sales, and 40 percent of truck tractor (heavy-duty trucks weighing 33,001 pounds or greater) sales. Additionally, large fleet operators (of 50 or more trucks) would be required to report information about shipments and services and their existing fleet operations.

2.2.4 California Air Toxics Program

The California Air Toxics Program was established in 1983, when the California Legislature adopted AB 1807 to establish a two-step process of risk identification and risk management to address potential health effects from exposure to toxic substances in the air. In the risk identification step, CARB and the OEHHA determine if a substance should be formally identified, or "listed," as a TAC in California. Since inception of the program, a number of such substances have been listed. In 1993, the California Legislature amended the program to identify the 189 federal HAPs as TACs. The SCAQMD has not adopted guidance applicable to land use projects that requires a quantitative health risk assessment be performed for construction exposures to TAC emissions.[72]

In the risk management step, CARB reviews emission sources of an identified TAC to determine whether regulatory action is needed to reduce risk. Based on the results of that review, CARB has promulgated a number of ATCMs, both for mobile and stationary sources. As discussed above, in 2004, CARB adopted an ATCM to limit idling of heavy-duty diesel motor vehicles weighing greater than 10,000 pounds to no more than 5 minutes at any location in order to reduce public exposure to DPM and other TACs.

The AB 1807 program is supplemented by the AB 2588 Air Toxics "Hot Spots" program, which was established by the California Legislature in 1987. Under this program, facilities are required to report their air toxics emissions, assess health risks, and notify nearby residents and workers of significant risks if present. In 1992, the AB 2588 program was amended by Senate Bill (SB) 1731

[71] CARB, Advanced Clean Trucks Program. https://ww2.arb.ca.gov/our-work/programs/advanced-clean-trucks/about. Accessed April 2025.

[72] SCAQMD, Final Environmental Assessment for Proposed Amended Rule 307.1 – Alternative Fees for Air Toxics Emissions Inventory; Proposed Amended Rule 1401 – New Source Review of Toxic Air Contaminants; Proposed Amended Rule 1402 – Control of Toxic Air Contaminants from Existing Sources; SCAQMD Public Notification Procedures for Facilities Under the Air Toxics "Hot Spots" Information and Assessment Act (AB 2588) and Rule 1402.

to require facilities that pose a significant health risk to the community to reduce their risk through implementation of a risk management plan.

2.3 Regional

2.3.1 South Coast Air Quality Management District

The SCAQMD is primarily responsible for planning, implementing, and enforcing air quality standards for the Air Basin, which includes all of Orange County; Los Angeles County (excluding the Antelope Valley portion); the western, non-desert portion of San Bernardino County; and the western Coachella Valley and San Gorgonio Pass portions of Riverside County. The Air Basin is an approximately 6,745-square-mile area bounded by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east. The Air Basin is a subregion within the western portion of the SCAQMD jurisdiction. While air quality in the Air Basin has improved, the Air Basin requires continued diligence to meet the air quality standards.

Air Quality Management Plan

The SCAQMD Governing Board adopted the *2022 Air Quality Management Plan* (AQMP) on December 2, 2022.[73] On January 26, 2023, CARB adopted Resolution 23-4, which directs the CARB Executive Officer to submit the 2022 AQMP to the USEPA for inclusion in the California SIP to be effective, for purposes of federal law, after notice and public hearing as required by Section 110(l) of the CAA and 40 Code of Federal Regulations Section 51.102 and approval by USEPA. USEPA approval has not yet occurred.

The 2022 AQMP includes strategies to ensure that approaching attainment deadlines for O_3 and PM2.5 are met and that public health is protected to the maximum extent feasible.[74] The 2022 AQMP is composed of stationary and mobile source emission reductions from traditional regulatory control measures, incentive-based programs, co-benefits from climate programs, mobile source strategies, and reductions from federal sources, which include aircraft, locomotives, and oceangoing vessels. These strategies are to be implemented in partnership with CARB and the USEPA.

The 2022 AQMP incorporates the transportation strategy and transportation control measures from Southern California Association of Government (SCAG)'s Connect SoCal 2020 (2020–2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS)) Plan.[75] SCAG is the regional planning agency for Los Angeles, Orange, Ventura, Riverside, San Bernardino, and Imperial Counties, and addresses regional issues relating to transportation, the economy, community development, and the environment. SCAG coordinates with various air quality and transportation stakeholders in Southern California to ensure compliance with the federal and state air quality requirements. Pursuant to California Health and Safety Code Section 40460, SCAG has

---

[73] SCAQMD, 2022 Air Quality Management Plan (AQMP), December 2022.

[74] The South Coast Air Basin was reclassified as extreme non-attainment and must attain the standard by August 2038. The 2022 AQMP shows attainment of the 2015 8-hour ozone standard by 2037.

[75] Southern California Association of Governments (SCAG), 2020. Final 2020-2045 RTP/SCS (Connect SoCal 2020), 2020, https://scag.ca.gov/read-plan-adopted-final-connect-socal-2020. Accessed April 2025.

the responsibility of preparing and approving the portions of the AQMP relating to the regional demographic projections and integrated regional land use, housing, employment, and transportation programs, measures, and strategies. SCAG is required by law to ensure that transportation activities "conform" to, and are supportive of, the goals of regional and state air quality plans to attain the NAAQS. The RTP/SCS includes transportation programs, measures, and strategies generally designed to reduce vehicle miles traveled (VMT), which are contained in the AQMP.

The SCAQMD combines its portion of the AQMP with those prepared by SCAG. The RTP/SCS and Transportation Control Measures, included as Appendix IV-C of the 2022 AQMP for the Air Basin, are based on SCAG's 2020–2045 RTP/SCS. The 2022 AQMP forecasts future emissions inventories "with growth" based on SCAG's 2020–2045 RTP/SCS. The region is projected to see a 12 percent growth in population, 17 percent growth in housing units, 11 percent growth in employment, and an 8 percent growth in VMT between 2018 and 2037. Despite regional growth in the past, air quality has improved substantially over the years, primarily due to the effects of air quality control programs at the local, state, and federal levels.[76] The growth projections in the Connect SoCal 2020 are based in part on projections originating under County and City General Plans. The Connect SoCal 2020 growth projections are utilized in the preparation of the air quality forecasts and consistency analysis included in the AQMP. While the 2024–2050 RTP/SCS (Connect SoCal 2024) has been released, as discussed below, it has not been incorporated into the AQMP and, therefore, the 2020–2045 RTP remains applicable for purposes of addressing air quality impacts and conflicts with the AQMP. [77]

Noteworthy control strategies for mobile sources in the AQMP with potential applicability to reducing short-term emissions from construction activities associated with the proposed Project include strategies denoted in the 2022 AQMP as MOB-06, MOB-11, and MOB-15, which are intended to reduce emissions from on-road and off-road heavy-duty vehicles and equipment.[78] Descriptions of measures MOB-06, MOB-11, and MOB-15 are provided below:

- **MOB-06 – Accelerated Retirement of Older On-Road Heavy-Duty Vehicles:** This measure seeks additional emission reductions from existing heavy-duty vehicles with GVWR greater than 8,500 lbs through an accelerated vehicle replacement program with zero or low NO_X emission vehicles.
- **MOB-11 – Emission Reductions from Incentive Programs:** This control measure seeks to quantify and take credit for the emission reductions achieved through the implementation of SCAQMD administered incentive programs for SIP purposes. The South Coast AQMD has been implementing a variety of incentive programs including, but not limited to, Carl Moyer Memorial Air Quality Standards Attainment Program, Proposition 1B, Lower Emission School Bus, Community Air Protection Program, and Volkswagen Environmental Mitigation Trust. Examples of projects funded by these programs include heavy-duty vehicle/equipment replacements, installation of retrofit units, and engine repowers. These incentive programs result in substantial emission reductions that are typically not eligible for credit in plans to

[76] SCAQMD, 2022 Air Quality Management Plan (AQMP), December 2022.

[77] SCAG, 2024, 2024–2050 Regional Transportation Plan/Sustainable Communities Strategy, https://scag.ca.gov/sites/main/files/file-attachments/23-2987-connect-socal-2024-final-complete-040424.pdf?1714175547. Accessed March 1, 2025.

[78] Ibid

attain ozone standards because they are not required by regulation. However, actual emission reductions that are realized and quantified may qualify for credit.

- **MOB-15 – Zero Emission Infrastructure for Mobile Sources:** This control measure is intended to support and accelerate the deployment of zero emission infrastructure needed for the widespread adoption of zero emission vehicles and equipment. AB 2127 estimated that the State will need 157,000 electric vehicle charging stations for medium and heavy-duty vehicles by 2030. AB 8 assessed the fueling needs for hydrogen fuel cell vehicles and found that 1,700 hydrogen stations will be needed to support 1.8 million fuel cell electric vehicles (FCEVs) statewide by 2035. The proposed measure seeks to address these concerns and identify the unique challenges and opportunities for zero emission infrastructure development in the South Coast Air Basin, particularly as it relates to zero emission medium and heavy vehicle deployments.

SCAQMD CEQA Guidelines

SCAQMD's CEQA guidelines are voluntary initiatives recommended for consideration by local planning agencies. The CEQA Air Quality Handbook (Handbook) published by SCAQMD provides local governments with guidance for analyzing and mitigating project-specific air quality impacts.[79] SCAQMD has updated some of the information and methods in the Handbook, such as the screening tables for determining the air quality significance of a project and the on-road mobile source emission factors. SCAQMD recommends using other approved models to calculate emissions from land use projects, such as CalEEMod.[80]

The SCAQMD's Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning considers impacts to air quality sensitive receptors from TAC-emitting facilities.[81] SCAQMD's siting distance recommendations are the same as those provided by CARB (e.g., a 500-foot siting distance for air quality sensitive receptors proposed in proximity to freeways and high-traffic roads, and the same siting criteria for distribution centers and dry cleaning facilities).

The SCAQMD Final Localized Significance Threshold Methodology and Final Methodology to Calculate Particulate Matter (PM) 2.5 and PM2.5 Significance Thresholds provides guidance when evaluating the localized effects of emissions in the CEQA evaluation.[82,83] These guidance documents were promulgated by the SCAQMD Governing Board as a tool to assist lead agencies with analyzing localized impacts associated with specific projects. The guidance documents establish mass emission rate "look up tables" as significance thresholds for projects that are five acres or less. For projects that are larger than five acres, it is recommended that project-specific air quality dispersion modeling is completed to determine localized air quality.

SCAQMD Rules and Regulations

Several SCAQMD rules adopted to implement portions of the AQMP may apply to the Project. The Project may be subject to the following SCAQMD rules and regulations:

- **Regulation IV – Prohibitions:** This regulation sets forth the restrictions for visible emissions, odor nuisance, fugitive dust, various air emissions, fuel contaminants, start-up/shutdown exemptions and breakdown events. The following is a list of rules which may apply to the Project:
  - Rule 401 – Visible Emissions: This rule states that a person shall not discharge into the atmosphere from any single source of emission whatsoever any air contaminant for a period or periods aggregating more than three minutes in any one hour which is as dark or darker in shade as that designated No. 1 on the Ringelmann Chart or of such opacity as to obscure an observer's view.
  - Rule 402 – Nuisance: This rule states that a person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.
  - Rule 403 – Fugitive Dust: This rule requires projects to prevent, reduce or mitigate fugitive dust emissions from a site. Rule 403 restricts visible fugitive dust to the project property line, restricts the net PM10 emissions to less than 50 micrograms per cubic meter ($\mu g/m^3$) and restricts the tracking out of bulk materials onto public roads. Additionally, projects must utilize one or more of the best available control measures (identified in the tables within the rule). Mitigation measures may include adding freeboard to haul vehicles, covering loose material on haul vehicles, watering, using chemical stabilizers and/or ceasing all activities. Finally, a contingency plan may be required if so determined by the USEPA.
- **Regulation XI – Source Specific Standards:** Regulation XI sets emissions standards for specific sources. The following is a list of rules which may apply to the Project:
  - Rule 1113 – Architectural Coatings: This rule requires manufacturers, distributors, and end users of architectural and industrial maintenance coatings to reduce VOC emissions from the use of these coatings, primarily by placing limits on the VOC content of various coating categories.
  - Rule 1121 – Control of Nitrogen Oxides from Residential Type, Natural Gas-Fired Water Heaters: This rule specifies NO_X emission limits for natural gas-fired water heaters, with heat input rates less than 75,000 British thermal units (BTUs) per hour.
  - Rule 1186 – PM10 Emissions from Paved and Unpaved Roads, and Livestock Operations: This rule applies to owners and operators of paved and unpaved roads and livestock operations. The rule is intended to reduce PM10 emissions by requiring the cleanup of material deposited onto paved roads, use of certified street sweeping equipment, and treatment of high-use unpaved roads (see also Rule 403).
- **Regulation XIII – New Source Review (NSR):** Regulation XIII sets requirements for preconstruction review required under both federal and state statutes for new and modified sources located in areas that do not meet the Clean Air Act standards ("non-attainment" areas). NSR applies to both individual permits and entire facilities. Any permit that has a

net increase in emissions is required to apply Best Available Control Technology (BACT). Facilities with a net increase in emissions are required to offset the emission increase by use of Emission Reduction Credits (ERCs). The regulation provides for the application, eligibility, registration, use and transfer of ERCs. For low emitting facilities, the SCAQMD maintains an internal bank that can be used to provide the required offsets. In addition, certain facilities are subject to provisions that require public notice and modeling analysis to determine the downwind impact prior to permit issuance.

- **Regulation XIV – Toxics and Other Non-Criteria Pollutants:** Regulation XIV sets requirements for new permit units, relocations, or modifications to existing permit units which emit toxic air contaminants or other non-criteria pollutants. The following is a list of rules which may apply to the Project:
  - Rule 1403 – Asbestos Emissions from Demolition/Renovation Activities: This rule requires owners and operators of any demolition or renovation activity and the associated disturbance of asbestos-containing materials, any asbestos storage facility, or any active waste disposal site to implement work practice requirements to limit asbestos emissions from building demolition and renovation activities, including the removal and associated disturbance of asbestos-containing materials.
  - Rule 1470 – Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines: This rule applies to stationary compression ignition (CI) engines greater than 50 brake horsepower and sets limits on emissions and operating hours. In general, new stationary emergency standby diesel-fueled engines greater than 50 brake horsepower are not permitted to operate more than 50 hours per year for maintenance and testing.

2.3.2 Southern California Association of Governments

On April 4, 2024, the SCAG's Regional Council formally adopted Connect SoCal 2024, which is an update to the previous Connect SoCal 2020. Using growth forecasts and economic trends, both the Connect SoCal 2020 and Connect SoCal 2024 provide a vision for transportation throughout the region for the next several decades by considering the role of transportation in the broader context of economic, environmental, and quality-of-life goals for the future and identifying regional transportation strategies to address mobility needs. [84] Connect SoCal 2024 describe how the region can attain the GHG emission-reduction targets set by CARB by achieving reductions in per-capita transportation GHG emissions of 8 percent by 2020 and 19 percent by 2035, compared to the 2005 level.[85] Compliance with and implementation of Connect SoCal 2024 policies and strategies would have the co-benefit of reducing per capita criteria air pollutant emissions (e.g., nitrogen dioxide, carbon monoxide, etc.) associated with reduced per capita VMT.

Connect SoCal 2024 states that the SCAG region was home to approximately 19 million people in 2019 and included approximately 6.2 million homes and approximately 9 million jobs.[86] By 2050, the integrated growth forecast projects that these figures will increase by 2 million people, with

[84] Southern California Association of Governments (SCAG), 2024a. Connect SoCal 2024, The Southern California Association of Governments' 2024-2050 Regional Transportation Plan/Sustainable Communities Strategy Final Program Environmental Report, Certified April 4, 2024.

[85] Ibid

[86] Ibid

approximately 1.6 million more homes and 1.3 million more jobs.[87] Connect SoCal 2024 will add 181,200 new miles of transit service, 4,000 new miles of bike lanes, and 869 new miles to the Regional Express Lane Network.[88] Priority Development Areas (PDAs), which are defined in Connect SoCal 2024 as areas where people have access to multiple modes of transportation or where trip origins and destinations are closer together allowing for shorter trips, will accommodate approximately 66 percent of new households and 54 percent of new jobs between 2019 and 2050.[89] PDAs include Neighborhood Mobility Areas (NMAs), Transit Priority Areas (TPAs), Livable Corridors, and Spheres of Influence (SOIs) (unincorporated areas only).

NMAs include intersection density, low-speed streets, land use diversity, and accessibility to amenities within one-mile using street network distances to improve, restore, and enhance safe and convenient connections to schools, hospitals, shopping, services, places of worship, parks, greenways, and other destinations. TPAs are areas within one half mile of existing or planned major transit stops. Livable Corridors are areas where local jurisdictions can plan and zone for increased density at nodes along key corridors and redevelop single-story underperforming retail with well-designed, higher-density housing and employment centers. SOIs are existing or planned service areas within the planning boundary outside of an agency's legal boundary in unincorporated areas to promote the efficient, effective, and equitable delivery of local and regional services for existing and future residents and to encourage a collaborative process between agencies.

Connect SoCal 2024's overall land use pattern reinforces the trend of focusing new housing and employment in the region's PDAs. PDAs are a development pattern that demonstrates how the region can sustainably accommodate needed housing by supporting transportation and land use strategies that achieve California's GHG emission reduction goals. Connect SoCal 2024 strives to increase housing production, improve equity and resilience, preserve natural lands, improve public health, increase transportation safety, support the goods movement industries, and use resources more efficiently.

Connect SoCal 2024 provides specific strategies for implementation. These strategies include implementing the development of Complete Streets that comprise a safe, multimodal network with flexible use of public rights-of-way for people of all ages and abilities using a variety of modes (e.g., people walking, biking, rolling, driving, and taking transit); encouraging residential development in areas surrounding existing and planned transit/rail stations; promoting growth in PDAs with a focus on future housing and population growth in areas with existing and planned urban infrastructure, including transit and active transportation to reduce single occupancy vehicles; encouraging housing in areas with access to community infrastructure and that are close to transit and walkable; and promoting 15-minute communities (areas where residents can access their day-to-day needs within a 15-minute walk, bike ride, or roll from their home.[90]

In addition, Connect SoCal 2024 includes strategies to promote active transportation, support local planning and projects that serve short trips, promote transportation investments, investments in

[87] Ibid
[88] Ibid
[89] Ibid
[90] Ibid

active transportation, prioritize climate mitigation, adaption, resilience and economic benefits of natural and working lands, and prioritize the most vulnerable populations and communities subject to climate hazards, promote sustainable water use planning, practices and storage, promote sustainable development, and reduce air pollutants and GHG emissions to improve air quality. CARB has accepted SCAG's GHG emissions quantification determinations as presented in Connect SoCal 2024 for future GHG emission reduction targets.[91]

Connect SoCal 2024's GHG emissions reduction target is more dependent on policies and programs than on capital projects, but it is projected to meet the 2035 target of 19 percent below 2005 levels.[92] SCAG achieved the 8 percent GHG emissions reduction from 2005 levels by 2020; however, the decreased travel during the COVID-19 shutdown most likely helped achievement of the 2020 target.[93]

2.4 Local

2.4.1 Culver City General Plan 2045

Local jurisdictions, such as Culver City, have the authority and responsibility to reduce air pollution through its police power and decision-making authority. The City reviews project plans for consistency with environmental regulations and other conditions applicable to proposed development. The City is also responsible for the implementation of transportation control measures as outlined in the AQMP. Examples of such measures include bus turnouts, energy-efficient streetlights, and synchronized traffic signals. In accordance with CEQA, the City has the authority to obtain input from other local agencies and may consult with any person with special expertise relating to a project's environmental impacts and to assess air quality impacts of new development projects. If significant impacts are found, the City has the authority to require mitigation of potentially significant air quality impacts by conditioning discretionary permits, utilizing monitors, and enforcing implementation of such mitigation measures.

The Culver City 2045 General Plan (City's General Plan) was adopted in October 2024 to provide guidance for future development necessary to achieve the community's economic, physical, and environmental goals through the year 2045. The City's General Plan includes a Community Health and Environmental Justice Element and a Conservation Element, which outline goals and policies that are aimed to reduce both air pollution and to equitably protect the community from health risks. The General Plan also contains a Land Use and Community Design Element, which contains objectives and guidelines relevant to air quality, regulations regarding the future development of the City's transportation network, and goals and policies geared to improve congestion, access to transit, and walkability. Additionally, the Mobility Element of the General Plan contains objectives and policies focused on public transit, bikeways, pedestrian access, and improving transportation network safety. Consistency with these goals and policies has the potential to reduce single

[91] Ibid
[92] Ibid
[93] Ibid

occupancy vehicle trips and VMT, thus reducing air pollutants from mobile sources. The growth projections within the General Plan inform the development of SCAQMD's AQMP.

The City's General Plan also contains a number of policies aimed at improving air quality within the City. The City's General Plan was recently updated in 2024 to set forth objectives, policies, standards, and programs for land use and new development, including clean air goals. Furthermore, the General Plan integrates equity, inclusion, health, and environmental justice across all its elements, prioritizing the needs of disadvantaged communities in alignment with Senate Bill 1000. Acknowledging the historical roots of disparities, including discriminatory housing and lending practices, the plan commits to policies fostering equitable outcomes, particularly through its Community Health and Environmental Justice Element. Goals and policies contained within the General Plan's elements that are relevant to air quality issues for the Project are specified below.

Community Health and Environmental Justice Element

Goal CHE J-2: Exposure to pollutants. All Culver City occupants and visitors enjoy clean air, water, and soil within residential and commercial neighborhoods, work and education centers, and recreational facilities.

- Policy CHEJ-2.1: Air quality monitoring. Monitor and improve poor air quality related to stationary and mobile sources of pollution.
- Policy CHEJ-2.4: Truck route coordination. Coordinate with the City of Los Angeles and Los Angeles County to ensure that Culver City's truck routes do not negatively impact neighboring sensitive land uses in their jurisdictions.
- Policy CHEJ-2.6: Minimizing pollution exposure. Support all residents, particularly SB 1000 Priority Neighborhoods, in minimizing their exposure to harmful air pollutants.
- Policy CHEJ-2.7: Sensitive land uses. Limit siting new sensitive land uses, such as schools, daycare centers, and playgrounds within 500 feet of freeways and the Inglewood Oil Field (IOF). For sensitive land uses that cannot be sited at least 500 feet away, require design mitigations including but not limited to:
    - Locate air intake systems for HVAC systems as far away from existing air pollution sources as possible.
    - Use HEPA filters in the heating, ventilation, and air conditioning systems and develop a maintenance plan to ensure the filtering system is properly maintained.
    - For nonresidential buildings, consider using only fixed windows next to any existing sources of pollution.
    - Plant landscape barriers between highways and residential areas to reduce noise and air pollution for residents.
- Policy CHEJ-2.8: Legacy pollutants. Continue to work with State, federal, and regional agencies to eliminate concentrations of regulated legacy pollutants.

Conservation Element

Goal C-4: Air Quality

- Policy C-4.3: Siting uses near freeways. Discourage siting of new sensitive uses, such as schools, daycare centers, and hospitals, within 500 feet from the I-405, I-10, and SR-90.

- Policy C-4.4: Siting of uses near IOF. Discourage new sensitive uses, such as schools, daycare centers, and hospitals within 500 feet from the active oil and gas uses within the IOF.

Land Use Element

Goal LU-1: Transit-oriented communities. Transit-oriented communities within a half mile of high-quality transit mix well-designed development, affordable housing, community services, and improved mobility options.

- Policy LU-1.1: Higher Densities Near Transit: Promote higher residential density and mixed-use developments to enhance walkability and transit use.
- Policy LU-1.2: Mix of Uses: Encourage mixed-use and affordable housing to balance regional jobs and housing, support walk-to-work options, and incorporate public and neighborhood-serving uses.
- Policy LU-1.3: Development Near Transit Stations: Incentivize jobs and housing growth near high-quality transit stops and corridors, emphasizing affordable housing in standalone and mixed-income projects.
- Policy LU-1.6: Parking Innovation: Promote shared parking, unbundled parking, and "park once" strategies to lower parking demand, reduce vehicle trips, and enhance mobility investments, while locating parking behind buildings to minimize visibility.
- Policy LU-1.7: Gathering Spaces Near Mobility Hubs and Transit Stations: Collaborate with developers to create community gathering spaces, like plazas and pocket parks, near transit stations and mobility hubs.

SECTION 3
Thresholds of Significance

The significance thresholds below are derived from the Environmental Checklist questions in Appendix G of the CEQA Guidelines. Accordingly, a significant impact associated with air quality would occur based on the following thresholds described below:

- **AIR-1:** Conflict with or obstruct implementation of the applicable air quality plan;
- **AIR-2:** Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard;
- **AIR-3:** Expose sensitive receptors to substantial pollutant concentrations; or
- **AIR-4:** Result in other emissions (such as those leading to odors) affecting a substantial number of people.

In addition to the impacts thresholds listed above, cumulative impacts with respect to air quality emissions are also addressed as part of this analysis.

Pursuant to CEQA Guidelines Section 15064.7, a lead agency may consider using, when available, significance thresholds established by the applicable air quality management district or air pollution control district when making determinations of significance. For purposes of this analysis, the potential air quality impacts of the Project are assessed in accordance with the most recent thresholds adopted by the SCAQMD in connection with its CEQA Air Quality Handbook, Air Quality Analysis Guidance Handbook, and subsequent SCAQMD guidance, as discussed below.[94]

3.1 Conflicts with Air Quality Plan

State CEQA Guidelines Section 15125 requires an analysis of project consistency with applicable governmental plans and policies. In accordance with the SCAQMD's CEQA Air Quality Handbook, the following criteria were used to evaluate the Project's consistency with the SCAQMD's 2022 AQMP:

- Criterion 1: Will the Project result in any of the following:
  - An increase in the frequency or severity of existing air quality violations; or

[94] While the SCAQMD CEQA Air Quality Handbook contains significance thresholds for lead, Project construction and operation would not include sources of lead emissions and would not exceed the significance thresholds for lead. Unleaded fuel and unleaded paints have virtually eliminated lead emissions from projects. As a result, lead emissions are not further evaluated.

  - Cause or contribute to new air quality violations; or
  - Delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.

- Criterion 2: Will the Project exceed the assumptions utilized in preparing the AQMP

The Project's potential impacts with respect to these criteria are discussed to assess the consistency with the SCAQMD's 2022 AQMP policies.

3.2 Regional Criteria Air Pollutant Emissions

SCAQMD has established numerical significance thresholds for regional emissions during construction and operation. The numerical significance thresholds are based on the recognition that the Air Basin is a distinct geographic area with a critical air pollution problem for which ambient air quality standards have been promulgated to protect public health.[95]

Given that construction impacts are temporary, SCAQMD has established significance thresholds specific to construction activity. Based on the indicators in the SCAQMD CEQA Air Quality Analysis Handbook,[96] the Project would potentially cause or contribute to an exceedance of an ambient air quality standard if the following would occur:

Regional construction emissions from both direct and indirect sources would exceed any of the following SCAQMD prescribed daily emissions thresholds:[97]

- 75 pounds a day for VOC
- 100 pounds per day for NO_X
- 550 pounds per day for CO
- 150 pounds per day for SO_X
- 150 pounds per day for PM10
- 55 pounds per day for PM2.5

SCAQMD has also established numeric significance thresholds for operations. SCAQMD has established significance thresholds in part based on CAA section 182(e), which identifies 10 tons per year of VOC and NO_X as a significance level for stationary source emissions in extreme non-attainment areas for ozone. The numeric significance thresholds for other pollutants are also based on federal major source thresholds, which vary depending on regional attainment status. For example, the Air Basin is in attainment for carbon monoxide, which yields a corresponding major

95 SCAQMD, CEQA Air Quality Handbook.

96 SCAQMD, Air Quality Analysis Handbook, https://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook. Accessed April 2025.

97 SCAQMD, SCAQMD Air Quality Significance Thresholds, revised March 2023, https://www.aqmd.gov/docs/default-source/ceqa/handbook/south-coast-aqmd-air-quality-significance-thresholds.pdf?sfvrsn=25. Accessed April 2025.

source threshold of 100 tons per year, or 550 pounds per day.[98] These "major source" significance thresholds were developed under the Federal Title V Operating Permit Program.[99] SCAQMD converted these significance levels to pounds per day. The attainment status designation is based on the healthfulness of air quality and the corresponding significance thresholds are intended to be health protective.[100]

A similar approach is applied to PM2.5, where the daily limit of 55 pounds per day is based on the USEPA proposed rule to implement a PM2.5 NAAQS, with a significant emission rate of 10 tons per year.[101]

The Project would potentially cause or contribute to an exceedance of an ambient air quality standard if regional operational emissions exceed any of the following SCAQMD prescribed daily emissions thresholds:[102]

- 55 pounds a day for VOC,
- 55 pounds per day for NO_X,
- 550 pounds per day for CO,
- 150 pounds per day for SO_X,
- 150 pounds per day for PM10, and
- 55 pounds per day for PM2.5.

SCAQMD has set its CEQA significance threshold for NO_X and VOC at 10 tons per year (expressed as 55 lb/day) because the federal CAA defines a major stationary source for extreme ozone nonattainment areas such as SCAQMD as one emitting 10 tons/year.[103] Under the federal CAA, such sources are subject to enhanced control requirements,[104] so SCAQMD determined that 55 lb/day was an appropriate threshold for making a CEQA significance finding and requiring feasible mitigation. Further, SCAQMD has stated:

> *"… a project source that emits 10 tons/year of NO_X or VOC is small enough that its regional impact on ambient ozone levels may not be detected in the regional air quality models that are currently used to determine ozone levels. Thus, in this case it would not be feasible to directly correlate project emissions of VOC or NO_X with specific health impacts from ozone."*[105]

102 SCAQMD, SCAQMD Air Quality Significance Thresholds.

103 42 U.S.C. §§ 75lla(e), 7511a(f); CAA §§ 182(e), 182(f)

104 42 U.S.C. §§ 7502(c)(5), 7503; CAA §§ 172(c)(5), 173

105 SCAQMD, Amicus Brief in Support of Neither Party, *Sierra Club v. County of Fresno*, 2015.

Therefore, lead agencies that use SCAQMD thresholds of significance may determine that projects have a significant air quality impact and correspondingly are required to implement all feasible mitigation measures, yet are not able to correlate the project impact to quantifiable health effects.

3.3 Substantial Pollutant Concentrations

3.3.1 Localized Significance Thresholds

SCAQMD published its Final Localized Significance Threshold Methodology in June 2003 (revised July 2008) and Final Methodology to Calculate Particulate Matter (PM) 2.5 and PM2.5 Significance Thresholds in October 2006, recommending that all air quality analyses include a localized assessment of both construction and operational impacts on the air quality of nearby air quality sensitive receptors.[106,107] LSTs represent the maximum emissions from a Project Site that are not expected to result in an exceedance of a NAAQS or CAAQS. LSTs are based on the ambient concentrations of that pollutant within the SRA where a project is located and the distance to the nearest air quality sensitive receptor. LSTs are only applicable to the following criteria air pollutants: NO_X, CO, PM10, and PM2.5. As previously stated, the Project Site is approximately 4.49 acres in size and is located in the SRA 3 (Southwest Coastal LA County), and the nearest sensitive receptor to the Project Site is located within 25 meters to the east.

The Basin is in attainment for NO_2 and CO, meaning their ambient concentrations are below their respective air quality standards. When evaluating localized impacts for NO_2 and CO, the local ambient concentrations and the Project-related concentrations are summed and then compared to the NAAQS and CAAQS. If the sum of the ambient concentrations and Project concentrations are greater than the air quality standard, this would result in a significant impact.

The Basin is in nonattainment for PM10 and PM2.5, meaning their ambient concentrations are above their respective air quality standards. If ambient levels already exceed a NAAQS or CAAQS, then Project impacts may be considered significant if they increase ambient concentrations in excess of the allowable increase established by SCAQMD. This would apply to PM10 and PM2.5, both of which are nonattainment pollutants in the Basin. For these latter two pollutants, the significance criteria are the pollutant concentration thresholds presented in SCAQMD Rules 403 and 1301. The Rule 403 threshold of 10.4 $\mu g/m^3$ applies to construction emissions (and may apply to operational emissions at aggregate handling facilities). The Rule 1301 threshold of 2.5 $\mu g/m^3$ applies to non-aggregate handling operational activities.

The SCAQMD has established screening criteria that can be used to determine the maximum allowable daily emissions that would satisfy the localized significance thresholds and therefore not cause or contribute to an exceedance of the applicable ambient air quality standards or ambient concentration limits without project-specific dispersion modeling. This analysis uses the screening criteria to evaluate impacts from localized emissions. If the Project would result in exceedance of the following screening criteria LSTs for the above pollutants, this would

[106] SCAQMD, Final Localized Significance Threshold Methodology, June 2003, revised July 2008.
[107] SCAQMD, Final Localized Significance Threshold Methodology, June 2003, revised July 2008.

constitute a significant impact, unless dispersion modeling demonstrates no exceedance of the concentration based standards.

- Construction:[108]
  - 185.78 pounds per day for NO_X
  - 1,655.07 pounds per day for CO
  - 13.81 pounds per day for PM10
  - 7.49 pounds per day for PM2.5
- Operation:[109]
  - 185.78 pounds per day for NO_X
  - 1,655.07 pounds per day for CO
  - 3.66 pounds per day for PM10
  - 1.83 pound per day for PM2.5

3.3.2 CO Hotspots

Emissions of CO are generated in greatest quantities from motor vehicle combustion of fossil fuels and are usually concentrated at or near ground level because they do not readily disperse into the atmosphere, particularly under cool, stable (i.e., low or no wind) atmospheric conditions. Localized areas where ambient concentrations exceed state and/or federal standards are termed CO hotspots. The potential for the Project to cause or contribute to the formation of offsite CO hotspots is evaluated based on prior dispersion modeling of the four busiest intersections in the SCAB that has been conducted by SCAQMD for its CO Attainment Demonstration Plan in the AQMP. SCAQMD conducted CO modeling for the 2003 AQMP for the four worst-case intersections in the SCAB that include: Wilshire Boulevard and Veteran Avenue; Sunset Boulevard and Highland Avenue; La Cienega Boulevard and Century Boulevard; and Long Beach Boulevard and Imperial Highway. In the 2003 AQMP, SCAQMD notes that the intersection of Wilshire Boulevard and Veteran Avenue is the most congested intersection in Los Angeles County, with an average daily traffic volume of approximately 100,000 vehicles per day. This intersection is located near the on- and off-ramps to Interstate (I) 405 in Westwood. The evidence provided in Table 4-10 of Appendix V of the 2003 AQMP shows that the peak modeled CO concentration due to vehicle emissions at these four intersections was 4.6 ppm (1-hour average) and 3.2 (8-hour average) at Wilshire Boulevard and Veteran Avenue. When added to the existing background CO concentrations, the screening values would be 7.6 ppm (1-hour average) and 5.6 ppm (8-hour average). Project-impacted intersections with peak-hour traffic volumes that are lower than the intersections modeled by SCAQMD, in conjunction with lower background CO levels, would result in lower overall CO concentrations compared to the SCAQMD modeled values in its AQMP.

[108] SCAQMD, Appendix C - Mass Rate LST Look-up Table, 2009.
[109] SCAQMD, Appendix C - Mass Rate LST Look-up Table.

With respect to the formation of CO hotspots, the Project would be considered significant if the following would occur:

- The Project would cause or contribute to an exceedance of the CAAQS one-hour or eight-hour CO standards of 20 or 9.0 ppm, respectively.

Based on the SCAQMD's 2003 AQMP CO hotspot analysis discussed above, a screening level of 100,000 vehicles per day through an intersection would result in less than significant localized CO impacts. Therefore, any intersection that does not exceed 100,000 vehicles per day would not have the potential to exceed the CAAQS.

3.3.3 Toxic Air Contaminants

Based on criteria set forth by the SCAQMD, the Project would expose sensitive receptors to substantial concentrations of toxic air contaminants if any of the following were to occur:[110]

- The Project would emit carcinogenic materials or TACs that exceed the maximum incremental cancer risk of 10 in one million or a cancer burden greater than 0.5 excess cancer cases (in areas greater than or equal to 1 in 1 million) or an acute or chronic hazard index of 1.0.

As discussed further below in Section 4, *Methodology,* construction impacts from TACs are evaluated quantitatively in a construction Health Risk Assessment (HRA) due to the use of heavy-duty, diesel equipment. For operations, the impacts are analyzed qualitatively due to the limited and minimal sources of TACs associated with operation of the proposed land uses.

3.4 Other Emissions

With respect to other emissions such as those leading to odors, the Project would be considered significant if it created other emissions such as objectionable odors affecting a substantial number of people.

[110] SCAQMD, CEQA Air Quality Handbook, Chapter 6 (Determining the Air Quality Significance of a Project) and Chapter 10 (Assessing Toxic Air Pollutants), (1993); SCAQMD, Air Quality Significance Thresholds.

SECTION 4

Methodology

The methodology used to evaluate the potential impacts to regional and local air quality and climate change that may result from the construction and long-term operations of the Project is discussed below.

4.1 Conflicts with Air Quality Plan

The SCAQMD is required, pursuant to the CAA, to reduce emissions of criteria pollutants for which the Air Basin is in non-attainment of the NAAQS (e.g., ozone and PM2.5).[111] The SCAQMD's 2022 AQMP contains a comprehensive list of pollution control strategies directed at reducing emissions and achieving NAAQS related to these pollutants. The 2022 AQMP incorporates growth and transportation projections from the SCAG Connect SoCal 2020, which is designed to reduce VMT in the region.[112]

The 2022 AQMP control strategies were developed, in part, based on regional growth projections prepared by SCAG. For this reason, projects whose growth is consistent with the assumptions used in the Connect SoCal 2020 will be deemed to be consistent with the 2022 AQMP because their growth has already been included in the growth projections utilized in the formulation of the control strategies in the 2022 AQMP. Thus, emissions from projects, uses, and activities that are consistent with the applicable growth projections and control strategies used in the development of the 2022 AQMP and Connect SoCal 2020 would not jeopardize attainment of the air pollutant reduction goals identified in the 2022 AQMP even if their emissions exceed the SCAQMD's thresholds of significance.[113]

As noted above, the 2022 AQMP has been adopted by the SCAQMD and CARB. Therefore, this analysis considers consistency of the Project with the 2022 AQMP based on the AQMP's consistency with applicable growth projections and emission control strategies.

[111] The Los Angeles County portion of the Air Basin is designated as nonattainment for the federal lead standard; however, this was due to localized emissions from two lead-acid battery recycling facilities in the City of Vernon and the City of Industry that are no longer operating. For reference, see South Coast Air Quality Management District, Board Meeting, Agenda No. 30, Adopt the 2012 Lead State Implementation Plan for Los Angeles County, May 4, 2012.

[112] While the 2024–2050 RTP/SCS (Connect SoCal 2024) has been released, it has not been incorporated into the AQMP. Therefore, the Connect SoCal 2020 remains applicable for the purposes of addressing air quality impacts and conflicts with the AQMP.

[113] SCAQMD, CEQA Air Quality Handbook, April 1993, page 12-1.

4.2 Regional Criteria Air Pollutant Emissions

4.2.1 Construction Emissions

Project construction activities that would have the potential to create regional air quality impacts include the use of heavy-duty construction equipment, such as excavators, backhoes, loaders, tractors, pavers, forklifts; vehicle trips generated by construction workers, vendor trucks, and haul trucks traveling to and from the Project Site; and building activities such as the application of paint and other surface coatings.

Daily regional emissions during construction are forecasted by assuming a conservative estimate of construction activities (i.e., assuming all construction occurs at the earliest feasible date) and applying the mobile source and fugitive dust emissions factors. If construction commences at a later date, construction emissions would be lower than those estimated below due to the use of a more energy-efficient and cleaner burning construction vehicle fleet mix. As a result, should Project construction commence at a later date than analyzed in this technical report, air quality impacts would be lower than the impacts disclosed herein. The emissions have been estimated using the CalEEMod software (CalEEMod 2022.1), an emissions inventory software program recommended by the SCAQMD, and the most recent version of CARB's on-road vehicle emissions factor model (EMFAC2021).

Project construction is estimated to start as early as the second quarter of 2026 and continue for approximately 29 months, ending by the first quarter of 2029. Construction phasing would include (i) demolition, shoring, and excavation; (ii) underground work; (iii) concrete structures; (iv) wood framing and building envelope; (v) mechanical, electrical, plumbing, and finishes; and (vi) site work. The Project is anticipated to export approximately 13,019 tons of demolition debris and approximately 10,000 cubic yards (cy) of soil. The Project is anticipated to import approximately 7,500 cy of soil to the Project Site. Worker and vendor deliveries will vary by phase with a maximum of 150 worker vehicles and 160 haul trucks accessing the site daily. Vendor trips are based on applicant-provided information and CalEEMod default estimates based on equipment use, whereas worker trips and haul trucks were estimated based on applicant-provided information. Emissions from construction vehicles, including worker vehicles, haul trucks, vendor trucks, and concrete trucks, were also estimated outside of CalEEMod using EMFAC2021 emission factors for haul, vendor, and concrete trucks because CalEEMod assumes that the number of heavy-duty trucks input into the model occurs across the entire length of the applicable construction phases. However, since the applicable construction phases would not require the same number of haul trucks, vendor trucks, and concrete trucks on-site every day within each particular phase, the emissions calculations performed outside of CalEEMod are able to account for the varying maximum numbers of daily haul truck and concrete truck trips within each of the demolition, grading/excavation, and foundations phases. Project design features, such as the use of USEPA Tier 4 Final equipment and electrified equipment, as described below in PDF-AIR-1, were incorporated into the construction emissions analysis.

As stated above, fugitive dust emissions would result from demolition and various soil-handling activities during construction of the Project. Construction contractors are required to comply with the applicable provision of SCAQMD Rule 403 (Fugitive Dust). As discussed above in Section 2, *Regulatory Setting*, SCAQMD Rule 403 requires construction activities to control fugitive dust emissions during construction by complying with best available control measures, such as ensuring sufficient freeboard height for haul vehicles, covering loose material on haul vehicles, applying water or non-toxic soil stabilizers in sufficient quantities to prevent the generation of visible dust plumes on disturbed or unpaved road surfaces, and limiting vehicle speeds to 15 miles per hour on unpaved surfaces. Within CalEEMod, fugitive dust emissions include the application of water as a control measure consistent with SCAQMD Rule 403, which applies to the Project's construction activities. Fugitive dust control measures are not mitigation under CEQA because they are mandatory for regulatory compliance.

Emissions from Project construction activities were estimated based on the construction phase in which the activity would be occurring. The maximum daily emissions estimate the worst-case day and do not represent the emissions that would occur for every day of Project construction. Use of USEPA Tier 4 Final emissions compliant equipment would reduce regional and localized pollutant emissions. The maximum daily emissions were compared to SCAQMD daily regional numeric indicators. A detailed discussion of the Project's construction phasing and equipment list is available in Appendix A of this technical report. The maximum daily emissions are compared to SCAQMD daily regional thresholds of significance. Emissions calculations and modeling output are included in Appendix A of this technical report.

4.2.1 Operational Emissions

Operation of the Project would generate criteria pollutant emissions from Project-generated vehicles trips traveling to and from the Project Site and area sources, such as landscaping equipment, architectural coatings, and consumer products, including solvents used in non-industrial applications that emit VOCs during use, such as cleaning supplies and kitchen aerosols. Operational impacts were assessed for the first full Project buildout year of 2029.[114]

Project operational emissions were estimated using CalEEMod Version 2022.1 to forecast the daily regional criteria pollutant emissions from on-site area and stationary sources that would occur during long-term Project operations.

Area source emissions are based on architectural coatings, landscaping equipment, and consumer product usage rates provided in CalEEMod. CalEEMod generates default natural gas usage factors based on the California Energy Commission (CEC) Electricity Demand Forecast Zone (EDFZ) and based on energy consumption estimates from the CEC's (2020, 2021) 2018–2030 Uncalibrated Commercial Sector Forecast and 2019 Residential Appliance Saturation Survey. The Project would be required to meet the Title 24 standards in effect at the time of building permit application. Conservatively, Project operational modeling and presented Project operational energy-related (natural gas) emissions assume that the entire Project would include natural gas infrastructure.[115]

[114] Although the construction schedule ends in September 2028, the Project is not anticipated to be begin operation until 2029 at the earliest.

[115] Note, the Project's residential units will be fully electric and will not include any natural gas infrastructure; therefore, Project energy-related emissions would be less than those disclosed within this technical report.

The Project's stationary sources would include one emergency generator with an estimated capacity rated at approximately 1,250 kilowatts (1,676 hp). The emergency generator would result in emissions during maintenance and testing operations. Emergency generators are permitted by the SCAQMD and regulated under SCAQMD Rule 1470. Maintenance and testing would not occur daily, but rather periodically, up to 50 hours per year per Rule 1470. For the purpose of estimating maximum daily emissions, it is estimated that the emergency generators would operate for up to 2 hours a day for 25 days a year (a total of 50 hours a year), for maintenance and testing purposes.

For the Project's mobile sources, the estimated vehicle trips and maximum daily VMT were calculated in the Project's Transportation Study using the City's VMT analysis procedures and Transportation Study Criteria and Guidelines.[116] Therefore, the Project's mobile source operational emissions represent a maximum day with the highest estimated VMT.

As discussed above, the existing Project Site is currently developed with a 112,276 sf office building, a three-story parking garage, and related surface parking. The Project includes demolition of all existing site facilities, including the office building and parking. As described above, in order to provide a conservative analysis, no credit is taken for existing operational AQ emissions and the Project's air quality emissions are conservatively considered new.

4.3 Substantial Pollutant Concentrations

4.3.1 Localized Construction Emissions

Project construction activities that would have the potential to create local air quality impacts including fugitive dust from demolition, grading, and building activities such as the application of paint and other surface coatings. The localized effects from the on-site portion of the Project's construction emissions were evaluated at the nearby sensitive receptor locations that would be potentially impacted by Project construction in accordance with the SCAQMD's *Final Localized Significance Threshold Methodology* (June 2003, revised July 2008). The localized significance thresholds only address NO_X, CO, PM10, and PM2.5 emissions. The SCAQMD has established screening criteria that can be used to determine the maximum allowable daily emissions that would satisfy the localized significance thresholds and therefore not cause or contribute to an exceedance of the applicable ambient air quality standards without the need for Project-specific dispersion modeling. The localized analysis for the Project is based on this SCAQMD screening criteria. The screening criteria depend on: (1) the SRA in which the Project is located, (2) the size of the Project Site, and (3) the distance between the Project Site and the nearest sensitive receptor. The maximum daily onsite emissions from construction of the Project were compared to these screening criteria. To provide a conservative assessment of localized construction and operational emissions, the screening criteria used in this analysis were based on those applicable to a 4.49-acre site in the Southwest Coastal LA County Source-Receptor Area with sensitive receptors located within 25 meters from the Project Site. The nearest sensitive receptors to the Project Site are residences to

[116] Gibson Transportation Consulting, Inc., Transportation Study for 100 Corporate Pointe Walk, March 2025. Provided in Appendix A of this Draft Technical Report.

the east of the Project site across Buckingham Parkway.[117] The maximum daily emissions from construction of the Project were compared to these screening criteria. Emissions calculations and modeling output are included in Appendix A of this technical report.

4.3.2 Localized Operational Emissions

The localized effects from the onsite portion of the operational emissions are evaluated at nearby sensitive receptor locations potentially impacted by the Project according to the SCAQMD's LST methodology, which relies on on-site mass emission rate screening tables and project-specific dispersion modeling, where appropriate. Similar to construction, the SCAQMD LST screening criteria used in this analysis were based on a 4.49-acre site in the Southwest Coastal LA County Source-Receptor Area with sensitive receptors located within 25 meters from the Project Site.[118]

Carbon Monoxide Hotspots

The greatest quantities of CO are produced from motor vehicle combustion and are usually concentrated at or near ground level because they do not readily disperse into the atmosphere, particularly under cool, stable (i.e., low or no wind) atmospheric conditions. Localized areas where ambient concentrations exceed State and/or federal standards are termed "CO hotspots."

As shown previously in Table 3, CO levels in the Project area are substantially below the federal and State standards. Maximum CO levels in recent years are 1.7 ppm or less (one-hour average) and 1.5 ppm or less (eight-hour average) compared to the thresholds of 20 ppm (one-hour average) and 9.0 ppm (eight-hour average). CO levels decreased dramatically in the Air Basin with the introduction of the catalytic converter in 1975. No exceedances of CO have been recorded at monitoring stations in the Air Basin for some time and the Air Basin is currently designated as a CO attainment area for both the CAAQS and NAAQS. Thus, it is not expected that CO levels at Project-impacted intersections would rise to the level of exceeding these standards.

Additionally, SCAQMD conducted CO modeling for the 2003 AQMP for the four worst-case intersections in the Air Basin: (1) Wilshire Boulevard and Veteran Avenue; (2) Sunset Boulevard and Highland Avenue; (3) La Cienega Boulevard and Century Boulevard; and (4) Long Beach Boulevard and Imperial Highway. In the 2003 AQMP, SCAQMD notes that the intersection of Wilshire Boulevard and Veteran Avenue is the most congested intersection in Los Angeles County, with an average daily traffic volume of approximately 100,000 vehicles per day. This intersection is located near the on- and off-ramps to the I-405 in West Los Angeles. The evidence provided in the 2003 AQMP (Table 4-10 of Appendix V) shows that the peak modeled CO concentration due to vehicle emissions at these four intersections was 4.6 ppm (one-hour average) and 3.2 (eight-hour average) at Wilshire Boulevard and Veteran Avenue. When added to the existing background CO

[117] SCAQMD, Final Localized Significance Threshold Methodology, June 2003 and revised July 2008, page 3-3. "Projects with boundaries located closer than 25 meters to the nearest receptor should use the LSTs for receptors located at 25 meters."

[118] SCAQMD, Final Localized Significance Threshold Methodology, June 2003 and revised July 2008, page 3-3. "Projects with boundaries located closer than 25 meters to the nearest receptor should use the LSTs for receptors located at 25 meters."

concentrations, the screening values would be 6.6 ppm (one-hour average) and 4.6 ppm (eight-hour average).

Average daily traffic counts for the Project area were provided by Gibson Transportation Inc.[119] Significance is determined by comparing the average daily traffic counts at each intersection from the cumulative plus project scenario to the 100,000 vehicle per day screening level identified above. If the Project results in less than 100,000 vehicles per day at any intersection, it is assumed the Project would not result in a CO hotspot.

4.1.3 Toxic Air Contaminants

The SCAQMD has also adopted land use planning guidelines in the Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning, which considers impacts to sensitive receptors from facilities that produce TAC emissions. SCAQMD's siting distance recommendations are the same as those provided by CARB (e.g., a 500-foot siting distance for sensitive land uses proposed in proximity of freeways and high-traffic roads, and the same siting criteria for distribution centers and dry-cleaning facilities). The SCAQMD's document introduces land use-related policies that rely on design and distance parameters to minimize emissions and lower potential health risk. SCAQMD's guidelines are voluntary initiatives recommended for consideration by local planning agencies.

Construction

The greatest potential for TAC emissions during construction would be related to diesel particulate matter (DPM) emissions associated with heavy-duty equipment during demolition, excavation, and grading activities. Construction activities associated with the Project would be sporadic, transitory, and short term in nature (approximately 29 months). Although Project construction would be temporary, construction impacts associated with TACs are addressed quantitatively in a construction health risk assessment (HRA).

The SCAQMD does not require projects to prepare quantitative construction HRAs and has no guidance on construction HRAs. Thus, health risk calculations were used from available guidance based on SCAQMD's risk assessment procedures normally used to evaluate health risk impacts from long-term operations for stationary source facility permit projects.

Emissions

As discussed previously, the Project's construction emissions were estimated using the CalEEMod software, an emissions computer model recommended by the SCAQMD. DPM emissions were assumed to be equal to PM10 exhaust emissions reported by CalEEMod. According to documentation from CARB, diesel exhaust consists of 92 percent PM2.5 and 100 percent PM10 (PM2.5 is a subset of PM10).[120] Therefore, utilizing the PM10 exhaust emissions reported by CalEEMod is appropriate for analyzing potential health risk impacts from diesel particulate matter.

[119] Gibson Transportation Consulting, Inc., Transportation Study for 100 Corporate Pointe Walk, March 2025. Count data included in air quality calculations provided in Appendix A of this report.

[120] California Air Resources Board, Speciation Profiles Used in ARB Modeling, PMSIZE (Excel)-Particle size fraction data for source categories, PM Profile Number 425 (Diesel Vehicle Exhaust), https://www.arb.ca.gov/ei/speciate/speciate.htm. Accessed April 2025.

The construction HRA included DPM emissions from on-road construction haul, and vendor truck trips were estimated using the EMFAC2021. For the purposes of this quantitative construction HRA, truck emissions were limited to those emissions that would occur within an approximately 0.33-mile radius of the Project Site boundaries.[121]

The maximum daily construction emissions were estimated for each construction phase and parcel of the Project. However, these emissions would not represent the emissions that would occur for every day of construction. Therefore, to account for the average construction usage, the average daily equipment fleet and usage hours was provided by the Project's construction representative and the average daily emissions of each construction phase were applied in the construction HRA. Detailed calculations can be found in Appendix A of this Air Quality Technical Report.

Dispersion Modeling

This construction HRA used the American Meteorological Society/Environmental Protection Agency regulatory air dispersion model (AERMOD version 24142) to estimate ambient concentrations of DPM at off-site residential uses. Residential receptors generally had a spacing of 10 meters, and each receptor was placed at a height of zero meters in accordance with SCAQMD modeling guidance for AERMOD.[122] Besides receptors, the AERMOD model requires numerous other inputs, such as meteorological data, topographical data, and source parameters.

Meteorological Data

This analysis used the AERMOD-ready meteorological dataset of the most appropriate meteorological air monitoring site, which is located at Santa Monica Municipal Airport (KSMO). The dataset includes four years of data from 2019-2023. The data was obtained from SCAQMD's meteorological database.

Modeling Terrain

Terrain and elevation data was imported from the United States Geological Survey's (USGS) National Elevation Dataset (NED) (United States Geological Survey 2013). The dataset consists of ground surface elevation data for the United States, Canada, and Mexico. Elevations for the modeled receptors and buildings were based on an NED dataset with a 10-meter resolution.

Based on the land use characteristics in the Project vicinity, urban dispersion coefficients were used in AERMOD. The site was modeled with the urban population of 9,663,345 based on SCAQMD's modeling guidance for AERMOD. The urban option in AERMOD accounts for increased turbulence associated with the urban heat island effect.

[121] SCAQMD, Rule 212, Standards for Approving Permits and Issuing Public Notice, http://www.aqmd.gov/docs/default-source/rule-book/reg-ii/rule-212.pdf. The SCAQMD provides recommendations for HRAs for facilities that have stationary sources or substantial daily trucks trips (such as warehouses, transit centers, truck stops, etc.).

[122] SCAQMD, Modeling Guidance for AERMOD, http://www.aqmd.gov/home/air-quality/meteorological-data/modeling-guidance. Accessed April 2025.

As noted above, Project construction sources may include off-road construction equipment and on-road diesel trucks (including haul trucks and vendor trucks). The modeling parameters used in AERMOD for each source are discussed below.

Modeled Source Characters

Emission rates from Project construction sources were based on the anticipated hours of activity for each source, as described above. The Project site and haul routes were modeled separately within AERMOD. The analysis used a unitized emission rate concept for each source group, where each source group is modeled with a unitized emission rate of 1 gram/second (g/s). The modeled concentration at each receptor (micrograms per cubic meter [μ/m^3]/[g/s]) represents a "dispersion factor," which was then multiplied by the actual emission rate of each source group to determine actual concentrations, and the final result from all the sources was superimposed.

Off-road Equipment

The exhaust emissions from off-road construction equipment were modeled as a poly-area sources equal to the size of the construction area assumed to be the Project Site area, with a 5-meter release height and 1.4-meter initial vertical dispersion.[123] For all Project construction activities, an even distribution of construction emissions over the entire area of construction for each construction phase was used with the assumption that emissions would originate from all potential locations within the construction source grid.

On-Road Heavy Duty Truck Travel

To conservatively represent the potential truck haul route options, a line volume source (i.e., line sources as a series of volume sources) was placed both traveling east and west along Slauson Ave from the Project Site. Therefore, two potential truck routes leading to and from the Project Site were modeled to represent the off-site diesel particulate matter emissions from trucks.

Risk Characterization

Health risk calculations were performed using OEHHA methodologies and exposure parameters, and the corresponding SCAQMD guidance documents. In March 2015, OEHHA updated the methods for estimating cancer risks to use higher estimates of cancer potency during early life exposures and to use different assumptions for breathing rates and length of residential exposures. The new guidance, Air Toxics Hot Spots Program Guidance Manual for the Preparation of Health Risk Assessments, incorporates advances in risk assessment with consideration of infants and children using Age Sensitivity Factors (ASF). These updated exposure factors can result in numeric life-time health risk values to be approximately two to three times higher than those calculated under the previous OEHHA guidelines. The quantitative construction HRA followed the OEHHA 2015 guidance.

This analysis calculated the cancer risk and chronic hazard indices to estimate Project-specific health risks for construction emissions using annual average pollutant ambient concentrations modeled by AERMOD.

[123] SCAQMD, Final Localized Significance Threshold Methodology.

The health risks are calculated as follows:

Equation 1: $Dose_{RESIDENT}$ (mg/kg/day) = $C_{AIR} \times DBR \times A \times EF \times CF$ where:

C_{AIR} = concentration in air (µg/m^3)

DBR or 8-hour BR = daily breathing rate or 8-hour breathing rate normalized to body weight (L/kg body weight-day)

A = inhalation absorption factor (1 for DPM, unitless)

EF = exposure frequency (unitless) (days/365 days)

CF = 10^{-6}, correction factor, micrograms to milligrams conversion, liters to cubic meters conversion

Equation 2: $Risk_{INH-RESIDENT}$ (in one million) = $Dose_{AIR} \times CPF \times ASF \times ED/AT \times FAH \times CCF$ where:

$Dose_{AIR}$ = daily inhalation dose (mg/kg-day)

CPF = cancer potency factor (mg/kg-day)$^{-1}$

ASF = age sensitivity factor (unitless)

ED = exposure duration (years)

AT = averaging time for lifetime cancer risk (years)

FAH = fraction of time spent at home (unitless)

A summary of the exposure parameters used under this methodology are shown in **Table 5**, *Cancer Risk Exposure Parameters*.

Risk Assessment

The assessment of health risks determines the relationship between the magnitude of chemical exposure and the nature and magnitude of adverse health risks resulting from this exposure. Cancer and chronic health risks were calculated using the OEHHA cancer potency factor (CPF) and Recommended Exposure Level (REL) for DPM.[124] The Scientific Review Panel recommends a CPF for DPM of 3.0×10^{-4} (µg/m^3)$^{-1}$ and a slope factor of 1.1 (mg/kg-day)$^{-1}$.[125] There is no acute toxicity factor for DPM.

Age Sensitivity Factors

The estimated excess lifetime cancer risks for residential receptors (including the early-in-life exposure) were adjusted using the ASFs recommended in the Cal/EPA OEHHA Technical Support Document and 2015 OEHHA guidance.[126] This approach accounts for an "anticipated special sensitivity to carcinogens" of infants and children. Cancer risk estimates were weighted by a factor of 10 for exposures that occur from the third trimester of pregnancy to two years of age and by a

factor of three for exposures that occur from 2 to 15 years of age. No weighting factor (i.e., an ASF equal to one, which is equivalent to no adjustment) is applied to ages 16 to 70 years.

b OEHHA 2015 Guidance Manual.

Cancer Risk Calculation

Excess lifetime cancer risks are estimated as the upper-bound incremental probability that an individual will develop cancer over a lifetime as a direct result of exposure to carcinogens. The risk is expressed as a unitless probability and was calculated as the number of cancer incidences per million individuals in the HRA. The cancer risk for each chemical was calculated by multiplying the chemical intake or dose at the human exchange boundaries (e.g., lungs) by the DPM CPF. For cancer risk, the SCAQMD guidance identifies a significant impact if a project would result in an incremental cancer risk that is greater than 10 in one million for a sensitive receptor and commercial receptors (workers).

Chronic Health Impacts

Non-cancer effects of chronic (i.e., long- term) DPM exposures were evaluated using the Hazard Index (HI) approach consistent with the OEHHA guidance. The chronic HI was calculated by dividing the modeled annual average concentration by the Reference Exposure Level (REL). The REL is the concentration at or below which no adverse health effects are anticipated. The REL for DPM was obtained from OEHHA. OEHHA has recommended an ambient concentration of 5 micrograms per cubic meter ($\mu g/m^3$) as the chronic inhalation REL for DPM exhaust. The SCAQMD guidance identifies a significant impact if a project would result in an incremental chronic HI that is greater than 1.0.

Operations

During long-term operations of the Project, TACs could be emitted as part of periodic maintenance operations, such as from routine cleaning, periodic painting, and periodic visits from delivery trucks and service vehicles. However, these events are expected to be occasional and result in minimal emissions exposure to off-site sensitive receptors. As the Project consists only of residential and neighborhood-serving commercial uses, the Project would not include sources of substantial TAC emissions identified by the SCAQMD or CARB siting recommendations.[127, 128]

4.4 Other Emissions

According to the SCAQMD *CEQA Air Quality Handbook*, land uses associated with odor complaints typically include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding. The Project's land uses would be compared to the uses identified by the SCAQMD as being associated with substantial odors.

4.5 Project Characteristics and Project Design Features

As discussed above, the City's General Plan includes several goals and policies related to reducing air pollutant emissions and exposures. Consistent with the Community Health and Environmental Justice Element's goal of improving air quality related to stationary and mobile sources of pollution, the Project will incorporate the following project design feature:

PDF-AIR-1: Construction Features: Construction equipment operating at the Project Site will be subject to a number of requirements. These requirements will be included in applicable bid documents, and successful contractor(s) must demonstrate the ability to supply such equipment. Construction measures would include, but are not limited to, the following:

- The Project will require all off-road diesel construction equipment greater than 25 horsepower (hp) to meet the U.S. Environmental Protection Agency Tier 4 Final off-road emission standards. A copy of each unit's certified tier specification or model year specification and California Air Resources Board or South Coast Air Quality Management District operating permit (if applicable) will be available upon request at the time of mobilization of each applicable unit of equipment.

[127] SCAQMD, Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning, 2005, Table 2-3.

[128] CARB, Air Quality and Land Use Handbook: A Community Health Perspective, 2005, Table 1-1.

SECTION 5
Environmental Impacts

5.1 Air Quality

Threshold AIR-1 Conflict with or obstruct implementation of the applicable air quality plan.

Impact AIR-1

Implementation of the Project would not conflict with or obstruct implementation of the applicable air quality plan. (Less than Significant).

The Project is located within the Air Basin, which is under the jurisdiction of the SCAQMD. As such, SCAQMD's 2022 AQMP is the applicable air quality plan for the Project. Projects that are consistent with the regional population, housing, and employment forecasts identified by SCAG are considered to be consistent with the AQMP growth projections, since the forecast assumptions by SCAG forms the basis of the land use and transportation control portions of the AQMP. Additionally, because SCAG's regional growth forecasts are based upon, among other things, land uses designated in general plans, a project that is consistent with the land use designation in a general plan would also be consistent with the SCAG's regional forecast projections, and thus also with the AQMP growth projections.

Criterion 1

With respect to the first criterion, as discussed under the analysis for Threshold AIR-3 below, localized concentrations of NO_2 as NO_X, CO, PM10, and PM2.5 have been analyzed for the Project. SO_2 emissions would be negligible during construction and long-term operations and, therefore, would not have the potential to cause or effect a violation of the SO_2 ambient air quality standard. Since VOCs are not a criteria pollutant, there is no ambient standard or localized threshold for VOCs. However, due to the role VOCs play in ozone formation, it is classified as a precursor pollutant, and only a regional emissions threshold has been established.

As shown in Table 7 below, regional maximum daily Project construction emissions would not exceed the SCAQMD regional construction emissions thresholds. Likewise, as shown in Table 8 below, regional maximum daily Project operations emissions would also not exceed the SCAQMD regional operations emissions thresholds. Therefore, the Project would not increase the frequency or severity of existing air quality violations, cause or contribute to new air quality violations, or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.

The Project's NO_X, CO, PM10, and PM2.5 emissions during construction and operations were analyzed: (1) to ascertain potential effects on localized concentrations; and (2) to determine if there is a potential for such emissions to cause or effect a violation of the ambient air quality standards for NO_2, CO, PM10, and PM2.5. As shown in Table 9 below, the increases in localized emissions of NO_2, CO, PM10, and PM2.5 during construction would not exceed the SCAQMD-recommended localized significance thresholds at sensitive receptors in proximity to the Project Site. Likewise, as shown in Table 10 below, the increases in localized emissions of NO_X, CO, PM10, and PM2.5 emissions during operation of the Project would also not exceed the SCAQMD-recommended localized significance thresholds at sensitive receptors in proximity to the Project Site. Therefore, the Project would not result in significant impacts related to localized air quality standards.

The 2022 AQMP is the current SCAQMD-adopted management plan for continued progression toward clean air and compliance with State and federal requirements (it is not yet adopted by the USEPA for inclusion in the State Implementation Plan). It includes a comprehensive strategy aimed at controlling pollution from all sources, including stationary sources, on- and off-road mobile sources, and area sources. It builds upon measures already in place from previous AQMPs and includes a variety of new strategies (e.g., regulation, accelerated deployment of available cleaner technologies, best management practices, co-benefits from existing programs, incentives, etc.) to achieve the NAAQS. The Project would be required to comply with all new and existing regulatory measures set forth by the SCAQMD so as not to potentially increase the frequency or severity of an existing violation or cause or contribute to a new violation. As such, implementation of the Project would not interfere with air pollution control measures listed in the 2022 AQMP and therefore would not delay attainment of the air quality standards.

Because of the residential and commercial nature of the Project, the Project would not introduce any substantial stationary sources of emissions; therefore, CO is the appropriate benchmark pollutant for assessing local area air quality impacts from post-construction motor vehicle operations.[129] As indicated below in Threshold AIR-3, no intersections would result in a CO hotspot in excess of the ambient air quality standards, and impacts would be less than significant. Therefore, the Project would not increase the frequency or severity of an existing CO violation or cause or contribute to new CO violations.

Therefore, in response to Criterion 1, the Project would not increase the frequency or severity of an existing violation or cause or contribute to new violations for ozone. Impacts regarding the timely attainment of air quality standards or interim emission reductions specified in the AQMP would be less than significant.

Criterion 2

With respect to the second criterion for determining consistency with 2022 AQMP growth assumptions, the projections in the AQMP for achieving air quality goals are based on assumptions in Connect SoCal 2020 regarding population, housing, and growth trends. Determining whether or not a project exceeds the assumptions reflected in the 2022 AQMP involves the evaluation of

[129] SCAQMD, CEQA Air Quality Handbook, Chapter 12, Assessing Consistency with Applicable Regional Plans, April 1993.

consistency with applicable population, housing, and employment growth projections and appropriate incorporation of 2022 AQMP control measures. The following discussion provides an analysis with respect to these criteria.

The 2022 AQMP relies on emissions forecasts based on the demographic and economic growth projections provided by SCAG's 2020-2045 RTP/SCS in devising its control strategies for reducing NO_X emissions to meet the 2015 8-hour NAAQS standards.[130] SCAG is charged by California law to prepare and approve "the portions of each AQMP that addresses transportation control measures, land use, and growth projections."[131] The SCAQMD recommends that, when determining whether a project is consistent with the current AQMP, the lead agency assess whether the project would directly obstruct implementation of the plan by impeding the SCAQMD's efforts to achieve attainment with respect to any criteria pollutant for which it is currently not in attainment of the NAAQS and CAAQS (e.g., ozone, PM10, and PM2.5) and whether it is consistent with the demographic and economic assumptions (typically land use related, such as employment and population/residential units) upon which the plan is based.[132] Projects whose growth is included in the projections used in the formulation of the 2022 AQMP are considered to be consistent with the plan and not to interfere with its attainment.[133]

Construction and operation of the Project would comply with applicable required fleet rules and control strategies to reduce on-road truck emissions (i.e., 13 CCR, Section 2025 [CARB Truck and Bus regulation]), and other applicable SCAQMD rules specified and incorporated in the 2022 AQMP. Projects, uses, and activities that are consistent with the applicable growth projections and control strategies used in the development of the 2022 AQMP would not jeopardize attainment of the air quality levels identified in the 2022 AQMP even if their emissions exceed the SCAQMD's thresholds of significance. As discussed below, compliance with the applicable required fleet rules and control strategies and requirements would render it consistent with, and meet or exceed, the AQMP requirements for control strategies intended to reduce emissions from construction equipment and activities. Thus, the Project's construction-related and operations-related criteria pollutant emissions would not cause the Air Basin's criteria pollutant emissions to worsen so as to impede the SCAQMD's efforts to achieve attainment with respect to any criteria pollutant for which it is currently not in attainment of the NAAQS and CAAQS (e.g., ozone, PM10, and PM2.5)[134] or to cause the Air Basin to deteriorate from its current attainment status with respect to any other criteria pollutant emissions.

As further discussed below, the Project is also consistent with the 2022 AQMP as the Project would incorporate into its design appropriate control strategies set forth in the 2022 AQMP for achieving

[130] SCAQMD, 2022 Air Quality Management Plan (AQMP), December 2022.

[133] South Coast Air Quality Management District. 1993. CEQA Air Quality Handbook, Chapter 12, Assessing Consistency with Applicable Regional Plans. April.

[134] The Los Angeles County portion of the Air Basin is designated as nonattainment for the federal lead standard; however, this was due to localized emissions from two lead-acid battery recycling facilities in the City of Vernon and the City of Industry that are no longer operating.

its emission reduction goals and would be consistent with the demographic and economic assumptions upon which the 2022 AQMP is based on.

Construction

Control Strategies

Control strategies in the current 2022 AQMP such as MOB-06 (Accelerated Retirement of Older On-Road Heavy-Duty Vehicles), MOB-11 (Emissions Reductions from Incentive Programs), and MOB-15 (Zero Emission Infrastructure for Mobile Sources) are intended to reduce emissions from on-road and off-road heavy-duty vehicles and equipment by accelerating replacement of older, emissions-prone engines with newer engines meeting more stringent emission standards. The compliance with applicable SCAQMD rules which require cleaner construction equipment would reduce construction-related emissions of criteria air pollutants and ozone precursors. During its construction phase, the Project would ensure compliance with CARB's requirements to minimize short-term emissions from on-road and off-road diesel equipment, and with SCAQMD's regulations such as Rule 403 for controlling fugitive dust and Rule 1113 for controlling VOC emissions from architectural coatings. The Project is also required to utilize construction contractors in compliance with State on-road and off-road vehicle rules, including the ATCM that limits heavy-duty diesel motor vehicle idling to five minutes at any location (Title 13 CCR, Section 2485), the Truck and Bus regulation that reduces NO_X, PM10, and PM2.5 emissions from existing diesel vehicles operating in California (13 CCR, Section 2025), and the In-Use Off-Road Diesel Fueled Fleets regulation that reduces emissions by the installation of diesel soot filters and encouraging the retirement, replacement, or repower of older, dirtier engines with newer emission controlled models (13 CCR, Section 2449). The Project's construction contractor would be required to comply with these regulatory control measures. As discussed above, the Project's regional and localized maximum daily Project construction emissions would not exceed the SCAQMD regional construction emissions thresholds and would not conflict with or obstruct implementation of the applicable AQMP. Therefore, Project impacts would be less than significant. As the achievement and maintenance of NAAQS and CAAQS is the goal of the 2022 AQMP, the Project would therefore not interfere with air pollution control strategies listed in the 2022 AQMP. Furthermore, as described in PDR-AIR-1, the Project would utilize off-road diesel equipment greater than 25 hp that meets USEPA Tier 4 Final off-road emission standards. Compliance with these regulatory control measures and design features would ensure the Project would not conflict with 2022 AQMP control strategies intended to reduce emissions from construction equipment and activities. Thus, impacts would be less than significant.

Growth Projections

The Project would generate short-term construction jobs, but these jobs would not necessarily bring new construction workers or their families into the region since construction workers are typically drawn from an existing regional pool who travel among construction sites within the region. Construction workers are not typically brought from other regions to work on developments such as the Project. Moreover, these jobs would be relatively small in number and temporary in nature, lasting at a maximum of approximately 29 months for the entire duration of the construction period. Therefore, the Project's construction jobs would not conflict with the long-term employment or population projections upon which the 2022 AQMP is based.

Operation

Control Strategies

As discussed above, the 2022 AQMP includes transportation control strategies from the 2020-2045 RTP/SCS that are intended to reduce VMT and resulting regional mobile source emissions. The majority of these strategies are to be implemented by cities, counties, and other regional agencies such as SCAG and SCAQMD, although some can be furthered by individual development projects.

The Project's location, design, and land uses would support land use and transportation control strategies related to reducing vehicle trips for people living at, working at, and visiting the Project by increasing housing density near public transit. The Project is considered an "urban infill" project as it replaces an existing commercial building with a new mixed-use building in an already developed urban area. The Project is accessible to and well served by public transit, including frequent and comprehensive transit services, and thus, the Project would be located in an high quality transit area, which SCAG defines as an area within a one-half mile of a well-serviced transit stop. Specifically, there are existing bus stops near the Project Site, including the Los Angeles County Metropolitan Transportation Authority (LA Metro) Metro Line 108 and Culver CityBus Line 3 bus stop located adjacent to the eastern boundary of the Project Site along Buckingham Parkway. Additionally, Culver CityBus Line 3 has a bus stop located within 0.1 miles of the southern boundary of the Project Site along Hannum Avenue. Further, the Project area is served by the Santa Monica Big Blue Bus Route 14, and the Culver City Transit Center is located 0.7 miles west of the Project Site. No modifications are proposed to these bus stops, which would remain with completion of the Project. This analysis provides evidence of the Project's consistency with the 2022 AQMP's goal of reducing mobile source emissions as a source of NO_X and PM2.5. Additionally, the Project would include long-term and short-term bicycle parking.

As described above, by locating higher density housing uses within an area that has existing high quality public transit (with access to existing local bus and rail service), housing, retail, and restaurants, all within walking distance, and by including features that support and encourage pedestrian activity and other non-vehicular transportation and increased transit use in the City, the Project would reduce vehicle trips, VMT, and resulting air pollutant emissions.

Growth Projections

The Project is anticipated to be fully operational in 2029. The Project's growth would be consistent with the growth projections contained in the Connect SoCal 2020. The Project would generate growth through the introduction of housing units on the Project Site. The Project Site is currently developed with an existing 112,276 sf office building, a three-story parking garage, and related surface parking. The proposed Project would demolish the existing on-site office and associated parking uses and instead would construct 351 units within a five- to seven-story multi-family affordable residential development. The Project's estimated residential population would be approximately 1,039 residents (based on an average 2.33 persons per housing unit for the City).[135] Therefore, the Project would result in net a population increase of 2.5 percent for the City (assuming

[135] California Department of Finance. 2020. E-5 Population and Housing Estimates for Cities, Counties, and the State–January 1, 20211–2020. Available: https://dof.ca.gov/forecasting/demographics/estimates/estimates-e5-2010-2020/. Accessed April 2025.

that all residents were new to the City, which in reality would not likely be the case).[136] The Project's estimated 1,039 residents would comprise a negligible amount of the City's SCAG forecasted population of 41,600 residents in 2045. The Project's proposed 351 housing units would comprise approximately 35 percent of SCAG's estimated increase of 1,000 households within the City between 2016 and 2045.

In contrast, the City's 2021-2029 RHNA (6th cycle) growth target is 3,341 residential units, of which 604 should be for low income households.[137] Accordingly, the Project's proposed housing would constitute only 10.5 percent of the City's 6th Cycle RHNA allocations between 2021 and 2029. The residential growth provided by the Project would contribute toward the attainment of the RHNA allocation and associated goals and policies to encourage housing development in the City. The Project would make progress towards the City's goal and would provide affordable housing units to help ameliorate the housing shortage in the City. Additionally, the Project's 30 low income affordable housing units will help the City make progress in meeting its RHNA allocation of 604 low income units. As such, the Project would provide much-needed housing but it would not generate growth beyond the range of development anticipated within the established SCAG regional forecast, and it would be consistent with the City's goals and policies.

The 2022 AQMP was prepared to accommodate growth, reduce the levels of pollutants within the areas under the jurisdiction of SCAQMD, return clean air to the region, and minimize the impact on the economy. Projects that are considered consistent with the AQMP would not interfere with attainment because this growth is included in the projections used in the formulation of the AQMP.

In addition to the Project's consistency with the 2022 AQMP, the Project would be consistent with the project-level applicable policies within the City's General Plan. The General Plan outlines goals and policies that are aimed to reduce air pollution and to protect the community from TACs. The Project's consistency with the applicable air quality goals, objectives, and policies in the General Plan is evaluated and shown in **Table 6,** *Project Consistency With Culver City General Plan 2045 Air Quality Goals And Policies*. As discussed in the table, the Project's construction and operations would not conflict with or be inconsistent with applicable air quality policies of the General Plan.

TABLE 6
PROJECT CONSISTENCY WITH CULVER CITY GENERAL PLAN 2045 AIR QUALITY GOALS AND POLICIES

Goal CHE J-2: Exposure to pollutants	Consistency
Policy CHEJ-2.3: Mobile source pollution. Reduce air pollution and vehicle-related emissions, especially from diesel-based trucks, that travel in Culver City	**Consistent:** The Project would incorporate design features for construction and operation to reduce air quality impacts from mobile sources. For construction, the Project would comply with the Air Toxic Control Measure to reduce idling emissions (including operations) to reduce mobile source emissions. The Project will comply with appliable control measures to minimize pollution emissions, including SCAQMD Rule 403, Fugitive Dust, and Rule 1113, Architectural Coating. Additionally, the project design features would include

[136] SCAG, City of Culver City 2022 Spatial and Statistical Summary, 2022

PROJECT CONSISTENCY WITH CULVER CITY GENERAL PLAN 2045 AIR QUALITY GOALS AND POLICIES

Goal CHE J-2: Exposure to pollutants	Consistency
	PDF AIR-1, which will require all off-road diesel construction equipment greater than 25 hp to meet the USEPA Tier 4 Final off-road emission standards. For operations, the Project would reduce vehicular trips and associated emissions as the Project is accessible to and well served by frequent and comprehensive public transit services, and thus, the Project would be located in an high quality transit area, which SCAG defines as an area within a one-half mile of a well-serviced transit stop. Specifically, there are many existing bus stops near the Project Site, including the Los Angeles County Metropolitan Transportation Authority (LA Metro) Metro Line 108 and Culver CityBus Line 3 bus stop located adjacent to the eastern boundary of the Project Site along Buckingham Parkway. Additionally, Culver CityBus Line 3 has a bus stop located within 0.1 miles of the southern boundary of the Project Site along Hannum Avenue. Further, the Project area is served by the Santa Monica Big Blue Bus Route 14, and the Culver City Transit Center is located 0.7 miles west of the Project Site. No modifications are proposed to these bus stops, which would remain with completion of the Project. Furthermore, the Project would incorporate mandatory requirements of the CALGreen Code and, the Project's residential units will be all electric . Further, the Project would incorporate 211 parking spots that are either EV ready, EV-capable, or full EV parking spaces, and the Project will install 104 bicycle parking spaces, thereby promoting low-emission alternative modes of transportation. Therefore, the Project is consistent with this policy.
Policy CHEJ-2.6: Minimizing pollution exposure. Support all residents, particularly SB 1000 Priority Neighborhoods, in minimizing their exposure to harmful air pollutants.	**Consistent:** The Project would incorporate design features for construction and operation to reduce air quality impacts. For construction, the Project would comply with the Air Toxic Control Measure to reduce idling emissions (including operations) to reduce mobile source emissions. The Project will comply with appliable control measures to minimize pollution emissions, including SCAQMD Rule 403, Fugitive Dust, and Rule 1113, Architectural Coating. Additionally, the project design features would include PDF AIR-1, which will require all off-road diesel construction equipment greater than 25 hp to meet the USEPA Tier 4 Final off-road emission standards. For operations, the Project would incorporate the mandatory requirements of the CALGreen Code and the transportation control measures of the 2022 AQMP outlined in the Connect SoCal 2020. Additionally, the Project's residential units will be all electric, resulting in minimal energy-related (natural gas) criteria pollutant emissions. Further, the Project would incorporate 211 parking spots that are either EV ready, EV-capable, or full EV parking spaces, and the Project will install 104 bicycle parking spaces, thereby promoting low-emission alternative modes of transportation. Therefore, the Project is consistent with this policy to minimize pollutant exposure.

TABLE 6
PROJECT CONSISTENCY WITH CULVER CITY GENERAL PLAN 2045 AIR QUALITY GOALS AND POLICIES

Goal CHE J-2: Exposure to pollutants	Consistency
Policy CHEJ-2.7: Sensitive land uses. Limit siting new sensitive land uses, such as schools, daycare centers, and playgrounds within 500 feet of freeways and the Inglewood Oil Field (IOF). For sensitive land uses that cannot be sited at least 500 feet away, require design mitigations including but not limited to: • Locate air intake systems for HVAC systems as far away from existing air pollution sources as possible. • Use HEPA filters in the heating, ventilation, and air conditioning systems and develop a maintenance plan to ensure the filtering system is properly maintained. • For nonresidential buildings, consider using only fixed windows next to any existing sources of pollution. • Plant landscape barriers between highways and residential areas to reduce noise and air pollution for residents.	**Consistent:** The Project will not include sensitive uses like schools, daycare centers, or playgrounds. Moreover, the Project Site is not located within 500 feet of a freeway. The Project Site is located more than 4,000 feet from the I-405 and more than 2,000 feet from the SR-90 eastern junction of Marina Fwy. Further, the Project Site is located more than 500 feet of the active oil and gas uses within the IOF. Therefore, the Project is consistent with this policy.
Goal C-41: Reduction of Air Pollution	
Policy C-4.1: Air quality coordination. Coordinate with agencies at the regional, State, and federal levels to address air quality issues.	**Consistent:** The Project would incorporate design features for construction and operation to reduce air quality impacts. For construction, the Project would comply with the Air Toxic Control Measure to reduce idling emissions (including operations) and to reduce mobile source emissions. The Project will comply with appliable control measures to minimize pollution emissions, including SCAQMD Rule 403, Fugitive Dust, and Rule 1113, Architectural Coating. Compliance with SCAQMD rules and regulations ensure compliance with regional, State, and federal air quality standards. Additionally, the project design features would include PDF AIR-1, which will require all off-road diesel construction equipment greater than 25 hp to meet the USEPA Tier 4 Final off-road emission standards. For operations, the Project would incorporate mandatory requirements of the CALGreen Code and transportation control measures of the 2022 AQMP as outlined in the Connect SoCal 2020. Additionally, the Project's residential units will be all electric, resulting in reduced energy-related (natural gas) criteria pollutant emissions. Further, the Project would incorporate 211 parking spots that are either EV ready, EV-capable, or full EV parking spaces, and the Project will install 104 bicycle parking spaces, thereby promoting low-emission alternative modes of transportation. Therefore, the Project is consistent with this policy.
Policy C-4.2: Collaborate with the South Coast Air Quality Management District. Work with the South Coast Air Quality Management District to achieve the California Ambient Air Quality Standards and the National Ambient Air Quality Standards.	**Consistent:** The Project would incorporate design features for construction and operation to reduce air quality impacts. For construction, the Project would comply with the Air Toxic Control Measure to reduce idling emissions (including operations) to reduce mobile source emissions. The Project will comply with appliable control measures to minimize pollution emissions, including SCAQMD Rule 403, Fugitive Dust, and Rule 1113, Architectural Coating. Additionally, the project design features would include PDF AIR-1, which will require all off-road diesel construction equipment greater

TABLE 6
PROJECT CONSISTENCY WITH CULVER CITY GENERAL PLAN 2045 AIR QUALITY GOALS AND POLICIES

Goal CHE J-2: Exposure to pollutants	Consistency
	than 25 hp to meet the USEPA Tier 4 Final off-road emission standards. For operations, the Project would incorporate mandatory requirements of the CALGreen Code and transportation control measures of the 2022 AQMP as outlined in the Connect SoCal 2020. Additionally, the Project's residential units will be all electric, resulting in reduced energy-related (natural gas) criteria pollutant emissions. Further, the Project would incorporate 211 parking spots that are either EV ready, EV-capable, or full EV parking spaces, and the Project will install 104 bicycle parking spaces, thereby promoting low-emission alternative modes of transportation. Therefore, the Project is consistent with this policy.
Policy C-4.3: Siting uses near freeways. Discourage siting of new sensitive uses, such as schools, daycare centers, and hospitals, within 500 feet from the I-405, I-10, and SR-90	**Consistent:** The Project will not include sensitive uses like schools, daycare centers, or hospitals. Moreover, the Project is not located within 500 feet of a freeway. The Project Site is located more than 4,000 feet from the I-405 and more than 2,000 feet from the SR-90 eastern junction of Marina Fwy. Therefore, the Project is consistent with this policy.
Policy C-4.4: Siting of uses near IOF. Discourage new sensitive uses, such as schools, daycare centers, and hospitals within 500 feet from the active oil and gas uses within the IOF.	**Consistent:** The Project will not include sensitive uses like schools, daycare centers, or hospitals. Moreover, the Project Site is located more than 500 feet from the active oil and gas uses within the IOF. Therefore, the Project is consistent with this policy.
Goal LU-1: Transit-oriented communities.	
Policy LU-1.1: Higher Densities Near Transit: Promote higher residential density and mixed-use developments to enhance walkability and transit use.	**Consistent:** The Project is plans to demolish an existing office building and parking structure to develop a mixed-use multi-family residential and commercial development. The Project is providing affordable housing pursuant to State Density Bonus Law and is therefore permitted to have a higher residential density. The Project is served by a high level of public transit, including the Metro Line 108 and Culver CityBus Line 3 stop located adjacent to the eastern boundary of the Project Site along Buckingham Parkway. Additionally, Culver CityBus Line 3 has a bus stop located within 0.1 miles of the southern boundary of the Project Site along Hannum Avenue. Further, the Project area is served by the Santa Monica Big Blue Bus Route 14, and the Culver City Transit Center is located 0.7 miles west of the Project Site. No modifications are proposed to these bus stops, which would remain with completion of the Project. Therefore, the Project is consistent with this policy.
Policy LU-1.2: Mix of Uses: Encourage mixed-use and affordable housing to balance regional jobs and housing, support walk-to-work options, and incorporate public and neighborhood-serving uses.	**Consistent:** The Project plans to demolish an existing office building and parking structure to develop a mixed-use multi-family residential and commercial development. The Project will include 351 residential units, including 30 affordable housing units in which permits the Project to have a higher residential density under State Density Bonus Law. The Project Site is served by multiple commercial and retail spaces within half a mile with walk-to-work and transit options. Therefore, the Project is consistent with this policy.
Policy LU-1.3: Development Near Transit Stations: Incentivize jobs and housing growth near high-quality	**Consistent:** The Project is a mixed-use development that includes 30 affordable housing units and commercial space. The Project is served by a high level of public

TABLE 6
PROJECT CONSISTENCY WITH CULVER CITY GENERAL PLAN 2045 AIR QUALITY GOALS AND POLICIES

Goal CHE J-2: Exposure to pollutants	Consistency
transit stops and corridors, emphasizing affordable housing in standalone and mixed-income projects	transit, including the Metro Line 108 and Culver CityBus Line 3 stop located adjacent to the eastern boundary of the Project Site along Buckingham Parkway. Additionally, Culver CityBus Line 3 has a bus stop located within 0.1 miles of the southern boundary of the Project Site along Hannum Avenue. Further, the Project area is served by the Santa Monica Big Blue Bus Route 14, and the Culver City Transit Center is located 0.7 miles west of the Property. No modifications are proposed to these bus stops, which would remain with completion of the Project. Therefore, the Project is consistent with this policy.
Policy LU-1.4: Connected Transit-Oriented Communities: Strengthen pedestrian, public transit, and bicycle connections to transit stops with pedestrian-friendly designs, safe road crossings, and street amenities.	**Consistent:** The Project is pedestrian friendly, with sidewalks available along all sides of the Project for connecting to public transit and nearby commercial and retail uses. The surrounding area includes public safety features, including safe road crossings and street lighting. Further, the Project would include 104 bicycle parking spaces, promoting alternative modes of transportation. The Project is served by a high level of public transit, including the Metro Line 108 and Culver CityBus Line 3 stop located adjacent to the eastern boundary of the Project Site along Buckingham Parkway. Additionally, Culver CityBus Line 3 has a bus stop located within 0.1 miles of the southern boundary of the Project Site along Hannum Avenue. Further, the Project area is served by the Santa Monica Big Blue Bus Route 14, and the Culver City Transit Center is located 0.7 miles west of the Property. No modifications are proposed to these bus stops, which would remain with completion of the Project. Additionally, the Project’s neighborhood-serving retail use and ground-floor residences with street-facing entrances/stoops will enhance the walkability of the neighborhood. Therefore, the Project is consistent with this policy.
Policy LU-1.6: Parking Innovation: Promote shared parking, unbundled parking, and "park once" strategies to lower parking demand, reduce vehicle trips, and enhance mobility investments, while locating parking behind buildings to minimize visibility.	**Consistent:** The Project would include 524 parking spaces within an enclosed structure. The Project’s parking garage would be designed to accommodate vehicles through a combination of standard and ADA-compliant vehicle parking spaces. Further, the Project would provide 211 parking spaces that are ether EV-ready, EV-capable, or full EV parking spaces, and the Project will install 104 bicycle parking spaces, thereby promoting low-emission alternative modes of transportation. Therefore, the Project is consistent with this policy.
Policy LU-1.7: Gathering Spaces Near Mobility Hubs and Transit Stations: Collaborate with developers to create community gathering spaces, like plazas and pocket parks, near transit stations and mobility hubs.	**Consistent:** The Project would include a 5,901-sf publicly accessible plaza and a 4,742-sf commercial retail/café space at the southwest corner of the Project Site near the intersection of Buckingham Parkway and Hannum Avenue. This gathering space is directly across the street from the Fox Hills Parkette and is near various public transit options, including Metro Line 108, Culver CityBus Line 3, the Santa Monica Big Blue Bus Route 14, and the Culver City Transit Center. No modifications are proposed to these bus routes, which would remain with completion of the Project. Therefore, the Project is consistent with this policy.

TABLE 6
PROJECT CONSISTENCY WITH CULVER CITY GENERAL PLAN 2045 AIR QUALITY GOALS AND POLICIES

Goal CHE J-2: Exposure to pollutants	Consistency
Policy LU-1.8: Development Standards Near Transit Stations: Allow relaxed development standards, such as reduced setbacks and increased building heights, within a half-mile of high-quality transit stops	**Consistent:** The Project plans to demolish an office building and parking structure to develop a mixed-use multi-family residential and commercial development. The Project will include 351 residential units, including 30 affordable housing units which permit a higher residential density pursuant to State Density Bonus Law. The density bonus will allow more residents to be served by the nearby transit stops, including LA Metro Bus Lines 3, 108, 110, and 5C2, which are all within half a mile of the Project Site. Therefore, the Project is consistent with this policy.

SOURCE: Culver City, General Plan 2045, 2024; ESA 2025

As detailed in *Impact AIR-2* below, the projected emissions would not exceed any of the SCAQMD's significance thresholds. In addition, the Project Site is designated Mixed Use Medium in the City's General Plan Land Use Element Map[138] and is zoned Mixed Use Medium (MU-MD).[139] The mixed-use Project's proposed residential and commercial uses are consistent with the General Plan designation and zoning for the Project Site. As a result, the Project would not conflict with or obstruct implementation of the AQMP or the City's General Plan. Therefore, regional operational impacts would be less than significant.

Mitigation: None Required

Significance Determination: Less than Significant.

Threshold AIR-2	Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard.

Impact AIR-2

Implementation of the Project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard. (Less than Significant)

The Project would contribute to local and regional air pollutant emissions during construction (short-term or temporary) and operation (long-term).

Construction

Regional Emissions Analysis

Construction of the Project has the potential to generate temporary regional criteria pollutant emissions through the use of heavy-duty construction equipment, such as backhoes, excavators, loaders, cranes, and paving equipment, through vehicle trips generated by workers and haul trucks traveling to and from the Project Site, and through building activities such as the application of paint and other surface coatings. In addition, fugitive dust emissions would result from site preparation and various soil-handling activities. Mobile source emissions, primarily NO_X, would result from the use of construction equipment such as excavators, dozers, and loaders. Construction emissions can vary substantially from day to day, depending on the level of activity, the specific type of construction activity, and prevailing weather conditions.

The maximum daily construction emissions for the Project were estimated for each construction phase. The maximum daily emissions are predicted values for a representative worst-case day and do not represent the actual emissions that would occur for every day of construction, which would likely be lower on many days. As stated above, construction emissions were modeled beginning in December 2025. Detailed emissions calculations are provided in Appendix A of this report.

The results of the criteria pollutant calculations are presented in **Table 7,** *Estimated Maximum Regional Construction Emissions (Pounds Per Day),* and include dust control measures required to be implemented by SCAQMD Rule 403 (Control of Fugitive Dust), including subsection (e) – Additional Requirements for Large Operations, and fugitive VOC control measures required to be implemented by architectural coating emission factors based on SCAQMD Rule 1113 (Architectural Coatings). In addition, as included in PDF-AIR-1, the Project would require the use of all off-road diesel construction equipment greater than 25 hp to meet the USEPA Tier 4 Final off-road emission standards. As shown in Table 7, construction-related daily emissions would not exceed the SCAQMD threshold of significance for any criteria pollutant. Therefore, regional construction emissions impacts would be less than significant.

Operations

Regional Emissions Analysis

As discussed above under Section 4, *Methodology*, operation of the Project would generate criteria pollutant emissions from Project-generated vehicles trips traveling to and from the Project Site and area sources such as landscaping equipment and consumer products, including solvents used in non-industrial applications that emit VOCs during use, such as cleaning supplies and kitchen aerosols. Operational emission estimates include compliance with SCAQMD Rule 1113 (Architectural Coatings), which limits the VOC content of architectural coatings. Daily vehicle miles traveled were obtained from the Transportation Study.[140] Emissions from the use of consumer products and the reapplication of architectural coatings are based on data provided in CalEEMod. As mentioned above, conservatively, Project operational modeling and presented Project operational energy-related (natural gas) emissions assumed that the entire Project would include

[140] Gibson Transportation Consulting, Inc., Transportation Study for 100 Corporate Pointe Walk, March 2025. Provided in Appendix A of this Draft Technical Report.

natural gas infrastructure.[141] Detailed emissions calculations are provided in Appendix A of this report.

---

[141] Note, the Project's residential units will be fully electric and will not include any natural gas infrastructure; therefore, Project energy-related emissions would be less than those disclosed within this technical report.

Results of the criteria pollutant calculations are presented in **Table 8**, *Regional Maximum Daily Operational Emissions (Pounds Per Day)*. As shown in Table 8, the increase in operational-related daily emissions for the criteria and precursor pollutants (VOC, NO_X, CO, SO_X, PM10, and PM2.5) would not exceed the SCAQMD threshold of significance for any non-attainment pollutants. Therefore, impacts would be less than significant.

TABLE 8
REGIONAL MAXIMUM DAILY OPERATIONAL EMISSIONS (POUNDS PER DAY)[a]

	Emissions (pounds per day)

Mitigation: None Required

Significance Determination: Less than Significant.

Threshold AIR-3 Expose sensitive receptors to substantial pollutant concentrations.

Impact AIR-3

Implementation of the Project would not expose sensitive receptors to substantial pollutant concentrations. (Less than Significant)

Localized Construction

The maximum daily localized emissions for each of the construction phases and the localized significance thresholds are presented in **Table 9**, *Estimated Maximum Localized Construction Emissions (Pounds Per Day).* The same phasing, equipment assumptions, and compliance with SCAQMD Rule 403 and Rule 1113 were used as for the regional emissions calculations discussed above. In addition, as included in PDF-AIR-1, the Project would require the use of all off-road diesel construction equipment greater than 25 hp to meet the USEPA Tier 4 Final off-road emission standards. As shown in Table 9, maximum localized construction emissions for sensitive receptors would not exceed the localized threshold of significance for any criteria pollutant. As the Project's maximum localized emissions from construction would not exceed the localized thresholds of significance, localized construction emissions impacts would be less than significant. Detailed emissions calculations are provided in Appendix A of this report.

Carbon Monoxide Hotspots

Construction

While construction-related traffic on the local roadways would occur during construction, the increase of construction worker vehicle and truck trips to the existing daily traffic volumes on local roadways would be relatively small (i.e., less than Project operations) and would not result in CO hotspots. Additionally, construction-related vehicle trips would only occur in the short-term and would cease once construction activities have been completed.

Operation

The potential for the Project to cause or contribute to CO hotspots was evaluated by comparing Project intersections (both intersection geometry and traffic volumes) with prior studies conducted by the SCAQMD in support of their AQMPs and considering existing background CO concentrations. As discussed below, this comparison demonstrates that the Project would not cause or contribute considerably to the formation of CO hotspots, that CO concentrations at Project-impacted intersections would remain well below the threshold one-hour and eight-hour ambient air quality standards (CAAQS) of 20 or 9.0 parts per million (ppm), respectively within one-quarter mile of a sensitive receptor, and that no further CO analysis is warranted or required.

CO levels in the Project area are substantially below the federal and the State standards. Maximum CO levels in recent years (2021-2023) were 2.6 ppm (one-hour average) and 1.9 ppm (eight-hour average) as compared to the criteria of 20 ppm (CAAQS one-hour average) or 35 ppm (NAAQS one-hour average) and 9.0 ppm (eight-hour average). No exceedances of the CO standards have been recorded at monitoring stations in the Air Basin since 2003,[142] and the Air Basin is currently designated as a CO attainment area for both the CAAQS and the NAAQS.

SCAQMD's 2003 AQMP estimated that the one-hour concentration for the intersection of Wilshire Boulevard and Veteran Avenue was 4.6 ppm, which indicates that the most stringent one-hour CO standard (20.0 ppm) would likely not be exceeded until the daily traffic at the intersection exceeded more than 100,000 vehicles per day. The AQMP CO hotspots modeling also took into account worst-case meteorological conditions and background CO concentrations. As an initial screening step, if a project intersection does not exceed 100,000 vehicles per day, then the project does not need to prepare a detailed CO hot spot analysis, and impacts would be considered less than significant. Based on the Project's Transportation Study, under Future plus Project (2029) conditions, the segment of Slauson Avenue between Marina Freeway and Bristol Parkway would have a traffic volume of approximately 52,350 average daily trips (ADT), which is below the daily traffic volumes of 100,000 vehicles per day that would be expected to generate CO exceedances as evaluated in the 2003 AQMP.[143] This daily trip estimate is based on the peak hour conditions of the intersection. There is no reason unique to the Air Basin meteorology to conclude that the CO concentrations in the Project Area would exceed the one-hour CO standard if modeled in detail, based on the studies undertaken for the 2003 AQMP. In addition, CO background concentrations within the vicinity of the modeled intersection have substantially decreased since preparation of the 2003 AQMP primarily due to ongoing fleet turnover of older on-road light duty vehicles and use of cleaner fuels. Therefore, the Project does not trigger the need for a detailed CO hotspots model and would not cause any new or exacerbate any existing CO hotspots. The Project's off-site operational activities, including the highest average daily trips, would not expose sensitive receptors to substantial CO concentrations. As a result, impacts related to localized mobile-source CO emissions are considered less than significant.

Toxic Air Contaminants

Construction

The Project's health risk calculations were performed using a spreadsheet tool consistent with the OEHHA guidance, which incorporates the algorithms, equations, and a variable described above as well as in the OEHHA guidance, and incorporates the results of the AERMOD dispersion model. **Table 11,** *Maximum Health Impacts for Off-Site Sensitive and Commercial Receptors,* summarizes the cancer risk and non-cancer impacts for the maximum impacted sensitive receptors and commercial receptors (workers).

As shown in Table 11, results of the construction HRA cancer risk for residential land and commercial receptors are below the SCAQMD's significance threshold. In addition, as shown in

[142] SCAQMD, 2022 AQMP, 2022, p. 2-42.

[143] Gibson Transportation Consulting, Inc., Transportation Study for 100 Corporate Pointe Walk, March 2025. Provided in Appendix A of this Draft Technical Report.

Table 11, the Project would not result in a chronic hazard index greater than 1.0; therefore, chronic health risks would be less than significant. As discussed previously, the lifetime exposure under OEHHA guidelines takes into account early life (infant and children) exposure. The calculated cancer risk is estimated for outdoor exposure and assumes that sensitive receptors (residential uses) would not have any mitigation such as mechanical filtration and that residential uses would have continuously open windows. As the maximum cancer risk and non-cancer impacts would be less than the SCAQMD significance thresholds, impacts would be less than significant.

TABLE 11
MAXIMUM HEALTH IMPACTS FOR OFF-SITE SENSITIVE AND COMMERCIAL RECEPTORS

Sensitive Receptor	Maximum Cancer Risk (# in one million)	Hazard Index
Residential Land Use	5.12	0.02
Commercial Land Use (Worker)	0.27	0.02
Maximum Health Impact Thresholds	10	1.0
Exceeds Threshold?	No	No

SOURCE: ESA, 2025.

The process of assessing health risks and impacts includes a degree of uncertainty, which is dependent on the availability of data and the extent to which assumptions are relied upon in cases where the data are incomplete or unknown. All HRAs rely upon scientific studies to reduce the level of uncertainty; however, it is not possible to completely eliminate uncertainty from the analysis. Where assumptions are used to substitute for incomplete or unknown data, it is standard practice in performing HRAs to err on the side of health protection to avoid underestimating or underreporting the risk to the public by assessing risk on the most sensitive populations, such as children and the elderly. As shown in Table 11, cancer risk for nearby sensitive receptors and commercial receptors would remain below significance thresholds. These short-term emissions would not substantially contribute to a significant construction health risk. No residual emissions and corresponding individual cancer risk are anticipated after Project construction. Therefore, the Project would result in a less than significant impact related to construction TAC emissions. Thus, construction activities would not expose sensitive receptors to substantial toxic air contaminant concentrations, and construction-related health impacts would be less than significant.

Operational

The SCAQMD recommends that operational health risk assessments be conducted for substantial sources of operational DPM (e.g., truck stops and warehouse distribution facilities that generate more than 100 trucks per day or more than 40 trucks with operating transport refrigeration units) and has provided guidance for analyzing mobile source diesel emissions.[144] Project operations would generate only minor amounts of diesel emissions from mobile sources, such as occasional delivery trucks, which would not exceed 100 trucks per day or more than 40 trucks with operating

[144] SCAQMD, Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis, August 2003, https://scag.ca.gov/sites/main/files/file-attachments/6th-cycle-rhna-final-allocation-plan.pdf. Accessed April 2025.

transport refrigeration units, and occasional maintenance activities, such as those associated with the Project's emergency generator. Furthermore, Project trucks would be required to comply with the applicable provisions of the CARB 13 CCR, Section 2025 (Truck and Bus regulation) to minimize and reduce PM and NO_X emissions from existing diesel trucks. Therefore, Project operations would not be considered a substantial source of diesel particulates.

Typical sources of acutely and chronically hazardous TACs include industrial manufacturing processes and automotive repair facilities. The Project would not include any of these potential sources, although minimal emissions may result from the customary use of consumer products (e.g., aerosol sprays) and delivery and/or waste collection truck trips. As a result, toxic or carcinogenic air pollutants are not expected to occur in any substantial amounts in conjunction with operation of the proposed land uses within the Project Site. Based on the uses expected on the Project Site, potential long-term operational impacts associated with the release of TACs would be minimal, regulated, and controlled, and would not be expected to exceed the SCAQMD numerical indicator of significance. As such, impacts would be less than significant.

Mitigation: None Required

Significance Determination: Less than Significant.

Threshold AIR-4	Result in other emissions (such as those leading to odors) affecting a substantial number of people.

Impact AIR-4

Implementation of the Project would not result in other emissions (such as those leading to odors adversely affecting a substantial number of people). (Less than Significant)

Construction

Potential activities that may emit odors during construction include the use of architectural coatings and solvents, as well as the combustion of diesel fuel in on-and off-road equipment. SCAQMD Rule 1113 would limit the amount of VOCs in architectural coatings and solvents. In addition, the Project would comply with the applicable provisions of the CARB Air Toxics Control Measure regarding idling limitations for diesel trucks. Through mandatory compliance with SCAQMD Rules, no construction activities or materials are expected to create objectionable odors affecting a substantial number of people. Furthermore, as shown in Table 7, construction emissions would not exceed the SCAQMD regional significance thresholds for attainment, maintenance, or unclassifiable criteria air pollutants (i.e., CO and SO_2). Therefore, construction activities would result in less than significant impacts with respect to other emissions, including those leading to odors.

Operations

According to the SCAQMD *CEQA Air Quality Handbook*, land uses associated with odor complaints typically include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding. The Project will consist only of residential and commercial uses, which are not identified by the SCAQMD as being associated with substantial odors. As a result, the Project is not expected to discharge contaminants into the air in quantities that would cause a nuisance, injury, or annoyance to the public or property pursuant to SCAQMD Rule 402. Furthermore, as shown in Table 8, operational emissions would not exceed the SCAQMD regional significance thresholds for attainment, maintenance, or unclassifiable criteria air pollutants (i.e., CO and SO_2). Therefore, operation of the Project would result in less than significant impacts with respect to other emissions, including those leading to odors.

Mitigation: None required.

Significance Determination: Less Than Significant.

SECTION 6
Cumulative Impacts

The City has identified a list of related projects to the Proposed Project. The nearest related projects to the Project Site would be the 5757 Uplander Project located approximately 700 feet to the southwest of the Project Site, the 5700 Hannum Project located approximately 150 feet southwest of the Project Site, and the 5730 Uplander Project located approximately 750 feet south of the Project Site. Other related projects are located greater than 1,000 feet from the Project Site. The related projects and any projects requiring discretionary approval would be required to conduct their own analysis under CEQA, demonstrate compliance with applicable air quality standards, and provide mitigation measures, if required.

6.1 Air Quality

The SCAQMD's approach for assessing cumulative impacts related to operations or long-term implementation is based on attainment of ambient air quality standards in accordance with the requirements of the CAA and the CCAA. As discussed earlier, the SCAQMD has developed a comprehensive plan, the AQMP, which addresses the region's cumulative air quality condition.

A significant impact may occur if a project would add a cumulatively considerable contribution of a federal or California non-attainment pollutant. Because the Los Angeles County portion of the Air Basin is currently in non-attainment for ozone, PM10, and $PM_{2.5}$, cumulative projects could exceed an air quality standard or contribute to an existing or projected air quality exceedance. Cumulative impacts to air quality are evaluated under two sets of thresholds for CEQA and the SCAQMD. In particular, State CEQA Guidelines Section 15064(h)(3) provides guidance in determining the significance of cumulative impacts. Specifically, Section 15064(h)(3) states in part that:

> *A lead agency may determine that a project's incremental contribution to a cumulative effect is not cumulatively considerable if the project will comply with the requirements in a previously approved plan or mitigation program which provides specific requirements that will avoid or substantially lessen the cumulative problem (e.g., water quality control plan, air quality plan, integrated waste management plan) within the geographic area in which the project is located. Such plans or programs must be specified in law or adopted by the public agency with jurisdiction over the affected resources through a public review process to implement, interpret, or make specific the law enforced or administered by the public agency.*

For purposes of the cumulative air quality analysis with respect to State CEQA Guidelines Section 15064(h)(3), the Project's incremental contribution to cumulative air quality impacts is determined based on compliance with the SCAQMD adopted AQMP. As discussed above in Threshold 1, the Project would not conflict with or obstruct implementation of AQMP and would be consistent with the growth projections in the AQMP.

Nonetheless, SCAQMD no longer recommends relying solely upon consistency with the AQMP as an appropriate methodology for assessing cumulative air quality impacts. The SCAQMD recommends that project-specific air quality impacts be used to determine the potential cumulative impacts to regional air quality. The Project's regional emissions would be below SCAQMD significance thresholds. In particular, non-attainment pollutant emissions of ozone precursors and particulate matter would not exceed the SCAQMD significance thresholds. The formation of ground-level ozone is a complex process due to photochemical reactions of precursor pollutants (i.e., VOC and NO_X emissions) in the atmosphere in the presence of sunlight. Meteorological factors, such as wind, would result in dispersive effects of pollutants, including ozone precursor and particulate matter emissions, that are dispersed horizontally downwind and through vertical mixing. It is unlikely that the Project's emissions, which would not exceed the SCAQMD significance thresholds, would result in a substantial measurable increase in the respective pollutant concentrations in the Air Basin to a degree that clearly predictable and identifiable heath impacts would specifically result from this Project's emissions.

6.1.1 Consistency with AQMP

As described above under *Impact AIR-1*, construction of the Project would be consistent with the AQMP as the Project would not generate emissions of nonattainment pollutants or precursors (i.e., NO_X) that exceed the applicable significance thresholds. As the Project's maximum regional emissions from construction would not exceed the regional thresholds of significance (Table 7), the Project would be consistent with the AQMP and cumulative impacts would be less than significant.

Operation of the Project would be consistent with the AQMP as the Project would not generate emissions of nonattainment pollutants or precursors (i.e., VOC, NO_X, CO, SOx, PM10, and PM2.5) that exceed the applicable significance thresholds (Table 8). Therefore, the Project would result in a less than significant cumulative operational impact.

Mitigation: None Required.

Significance Determination: Less than Significant

6.1.2 Project-Specific Impacts

Construction

As described above under *Impact AIR-2* and *Impact AIR-3*, regional and localized emissions during construction of the Project would not exceed the SCAQMD significance thresholds. Thus, based on SCAQMD methodology, the Project's construction emissions would not represent a considerable contribution to a cumulative impact. As the Project's maximum regional emissions from construction would not exceed the regional thresholds of significance, the Project would not represent a considerable contribution to a cumulative impact, resulting in a less than significant cumulative impact.

Operation

As discussed above, regional and localized operational emissions of VOC, NO_X, CO, PM10, and PM2.5 would not exceed the SCAQMD significance thresholds. Thus, based on SCAQMD methodology, the Project operational emissions would not represent a considerable contribution to a cumulative impact, resulting in a less than significant cumulative impact.

Mitigation: None Required.

Significance Determination: Less than Significant

INTENTIONALLY BLANK

Architectural and Area Coating Calculations

CalEEMod assumes the total surface for architectural coating equals:		
Residential Coating Area	2.7	times the floor square footage
	75%	interior
	25%	exterior
Nonresidential Coating Area	2	times the square footage
	75%	interior
	25%	exterior
Parking Lot Coating Area	6%	of the square footage
	0%	exterior for surface lot

100 Corporate Pointe
Road Dust

Paved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,P} = (k\ (sL)^{0.91} \times (W)^{1.02})$

Where:

$EF_{Dust,P}$ = Paved Road Dust Emission Factor (having the same units as k)

k = particle size multiplier

sL = road surface silt loading (g/m^2)

W = average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)

	Emission Factor (grams per VMT)	
	PM10	PM2.5
k	0.9979	0.2449
sL	0.1	0.1
W	2.4	2.4
$EF_{Dust,P}$	3.00E-01	7.36E-02

Unpaved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,U} = (k\ (s / 12)^1 \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C)$

Where:

$EF_{Dust,U}$ = Unpaved Road Dust Emission Factor (having the same units as k)

k = particle size multiplier

s = surface material silt content (%)

Sp = mean vehicle speed (mph)

M = surface material moisture content (%)

C = Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

	Emission Factor (grams per VMT)	
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01

100 Corporate Pointe - Construction Max Day Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	100 Corporate Pointe - Construction Max Day
Construction Start Date	5/1/2026
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.50
Precipitation (days)	8.20
Location	100 Corporate Pointe, Culver City, CA 90230, USA
County	Los Angeles-South Coast
City	Culver City
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4444
EDFZ	16
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.29

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Condo/Townhouse High Rise	351	Dwelling Unit	3.19	425,433	0.00	—	1,039	—

Other Non-Asphalt Surfaces	44.9	1000sqft	0.20	0.00	0.00	—	—	—
Enclosed Parking with Elevator	524	Space	1.00	204,059	0.00	—	—	—
Regional Shopping Center	5.79	1000sqft	0.10	5,794	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Control Strategies Applied	PM10 Reduction	PM2.5 Reduction
Water unpaved roads twice daily	55%	55%

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Finishing/Painting	861,502	287,167	382,130	127,377	12,244

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Ton of Debris)	Acres Paved (acres)
Demolition	0.00	0.00	0.00	13,019	—

Site Preparation	0.00	1,000	159	0.00	—
Grading/Excavation	10,000	10,000	159	0.00	—
Paving	0.00	0.00	0.00	0.00	1.40

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Condo/Townhouse High Rise	—	0%
Other Non-Asphalt Surfaces	0.00	0%
Enclosed Parking with Elevator	1.40	100%
Regional Shopping Center	0.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2026	2,781	532	0.03	< 0.005
2027	1,588	532	0.03	< 0.005
2028	135	532	0.03	< 0.005

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.27	annual days of extreme heat
Extreme Precipitation	5.20	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	37.6
AQ-PM	66.0
AQ-DPM	59.9
Drinking Water	25.9
Lead Risk Housing	32.9
Pesticides	0.00
Toxic Releases	82.1
Traffic	93.2
Effect Indicators	—
CleanUp Sites	78.3
Groundwater	90.0
Haz Waste Facilities/Generators	78.1
Impaired Water Bodies	66.7
Solid Waste	84.7

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	48.0
Healthy Places Index Score for Project Location (b)	84.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No

Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

A.1-3 Operational Air Quality Calculations and Modeling

100 Corporate Pointe
Air Quality Assessment
Regional Operational Emissions

Maximum Unmitigated Regional Operational Emissions (pounds per day)						
Source	**ROG**	**NO_X**	**CO**	**SO_2**	**PM_{10}**	**$PM_{2.5}$**
Motor Vehicles	2.92	3.88	26.88	8.23E-02	8.04	2.05
Area (Coating, Consumer Products, Landscaping)	13.86	0.33	29.12	1.83E-03	0.03	0.02
Energy (Natural Gas) [1]	0.05	0.89	0.38	5.66E-03	0.07	0.07
Emergency Generators	1.31	24.94	14.27	3.01E-04	0.10	0.10
Total Project On-Site and Off-Site Emissions	**18.14**	**30.03**	**70.66**	**9.01E-02**	**8.25**	**2.25**
SCAQMD Numeric Indicators	**55.00**	**55.00**	**550.00**	**150.00**	**150.00**	**55.00**
Over/(Under)	(36.86)	(24.97)	(479.34)	(149.91)	(141.75)	(52.75)
Exceeds Thresholds?	**No**	**No**	**No**	**No**	**No**	**No**

1 Energy-related (natural gas) emissions assume that the entire Project would include natural gas infrastructure. However, residential units will be fully electric and will not include any natural gas infrastructure; therefore, energy-related (natural gas) emissions would be less than those disclosed herein.

100 Corporate Pointe
Road Dust Emission Factors

Paved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,P} = (k\ (sL)^{0.91} \times (W)^{1.02})$

Where:

$EF_{Dust,P}$ = Paved Road Dust Emission Factor (having the same units as k)
k = particle size multiplier
sL = road surface silt loading (g/m^2)
W = average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)

	Emission Factor (grams per VMT)	
	PM10	PM2.5
k	0.9979	0.2449
sL	0.1	0.1
W	2.4	2.4
$EF_{Dust,P}$	3.00E-01	7.36E-02

Unpaved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,U} = (k\ (s / 12)^{1} \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C)$

Where:

$EF_{Dust,U}$ = Unpaved Road Dust Emission Factor (having the same units as k)
k = particle size multiplier
s = surface material silt content (%)
Sp = mean vehicle speed (mph)
M = surface material moisture content (%)
C = Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

	Emission Factor (grams per VMT)	
	PM10	PM2.5
k	816.47	81.65
s	4.3%	4.3%
Sp	15	15
M	0.5%	0.5%
C	0.00047	0.00036
$EF_{Dust,U}$	5.20E+00	5.19E-01

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.27	annual days of extreme heat
Extreme Precipitation	5.20	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	37.6

AQ-PM	66.0
AQ-DPM	59.9
Drinking Water	25.9
Lead Risk Housing	32.9
Pesticides	0.00
Toxic Releases	82.1
Traffic	93.2
Effect Indicators	—
CleanUp Sites	78.3
Groundwater	90.0
Haz Waste Facilities/Generators	78.1
Impaired Water Bodies	66.7
Solid Waste	84.7
Sensitive Population	—
Asthma	40.7

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	48.0
Healthy Places Index Score for Project Location (b)	84.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Control Strategies Applied	PM10 Reduction	PM2.5 Reduction
Water unpaved roads twice daily	55%	55%

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Finishing/Painting	861,502	287,167	382,130	127,377	12,244

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Ton of Debris)	Acres Paved (acres)
Demolition	0.00	0.00	0.00	13,019	—

Site Preparation	0.00	1,000	159	0.00	—
Grading/Excavation	10,000	10,000	159	0.00	—
Paving	0.00	0.00	0.00	0.00	1.40

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Condo/Townhouse High Rise	—	0%
Other Non-Asphalt Surfaces	0.00	0%
Enclosed Parking with Elevator	1.40	100%
Regional Shopping Center	0.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2026	1,987	532	0.03	< 0.005
2027	1,429	532	0.03	< 0.005
2028	135	532	0.03	< 0.005

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.27	annual days of extreme heat
Extreme Precipitation	5.20	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	37.6
AQ-PM	66.0
AQ-DPM	59.9
Drinking Water	25.9
Lead Risk Housing	32.9
Pesticides	0.00
Toxic Releases	82.1
Traffic	93.2
Effect Indicators	—
CleanUp Sites	78.3
Groundwater	90.0
Haz Waste Facilities/Generators	78.1
Impaired Water Bodies	66.7
Solid Waste	84.7
Sensitive Population	—
Asthma	40.7

Cardio-vascular	24.2
Low Birth Weights	67.2
Socioeconomic Factor Indicators	—
Education	3.87
Housing	40.9
Linguistic	6.27
Poverty	4.91
Unemployment	49.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	75.96561016
Employed	94.55921981
Median HI	69.22879507
Education	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	48.0
Healthy Places Index Score for Project Location (b)	84.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No

Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

Haul Truck/Worker Trip Adjustment Factor to Model

	Total (miles)
	HAUL
Haul Distance (Haz Waste Facility or Landfill)	70
Hauling Default	40
Vendor	20.40
AERMOD	0.42
% in Dispersion Model, Hauling (Haz Waste Facility or Landfill)	0.6%
Hauling Default	1.1%
% in Dispersion Model, Vendor	2.1%

Calculated in Lake AERMOD View

Haul Route - W 678 m

Haul Route Model 678
0.678 km modeled
0.62 km to mile conversion
0.42 Miles modeled

Conservatively multiplying by largest percentage of emissions by vehicle class included within each phase

MAX: 0.017
