Risk Factors

	Abbreviation	UOM	3rd Trimester	0<2	2<16	16<30
8-HR Breathing Rate (95th %'ile)	DBR	L/kg-day	361	1090	520	261
Modeling Adjustment Factor	MAF	unitless	1	1	3.36	0.73
Exposure Frequency	EF	days/year	0.96	0.96	0.49	0.96
Age Sensitivity Factor	ASF	unitless	10	10	3	1
Inhalation Absorption Factor	A	unitless	1	1	1	1
Conversion Factor	CF_1	m^3/L	0.001	0.001	0.001	0.001
Conversion Factor	CF_2	$\mu g/m^3$	0.001	0.001	0.001	0.001
Cancer Potency Factor (diesel exhaust)	CPF	mg/kg-day^{-1}	1.1	1.1	1.1	1.1
Averaging Time (for residential exposure)	AT	years	70.00	70.00	70.00	70.00

4.2 eliminates averging with zeros in AERMOD

discount factor = (8 hours in office / 10 hours construction)

Intake Factor for Inhalation, IF (m^3/kg-day)

Road Dust Emission Factors

Paved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,P} = (k\ (sL)^{0.91} \times (W)^{1.02})$

Where:

$EF_{Dust,P}$ = Paved Road Dust Emission Factor (having the same units as k)
k = particle size multiplier
sL = road surface silt loading (g/m^2)
W = average fleet vehicle weight (tons) (CARB uses 2.4 tons as a fleet average vehicle weight factor)

	Emission Factor (grams per VMT)	
	PM10	PM2.5
k	0.9979	0.2449
sL	0.1	0.1
W	2.4	2.4
$EF_{Dust,P}$	3.00E-01	7.36E-02

Unpaved Road Dust Emission Factors (Assumes No Precipitation)

Formula: $EF_{Dust,U} = (k\ (\ s / 12)^{1} \times (Sp / 30)^{0.5} / (M / 0.5)^{0.2}) - C)$

Where:

$EF_{Dust,U}$ = Unpaved Road Dust Emission Factor (having the same units as k)
k = particle size multiplier
s = surface material silt content (%)
Sp = mean vehicle speed (mph)
M = surface material moisture content (%)
C = Emission Factor for 1980s vehicle fleet exhaust, brake wear, and tire wear

	Emission Factor (grams per VMT)

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	5757 Uplander - Phase 1 Ops
Operational Year	2029
Lead Agency	—
Land Use Scale	—
Analysis Level for Defaults	County
Windspeed (m/s)	3.50
Precipitation (days)	8.20
Location	5757 Uplander Way, Culver City, CA 90230, USA
County	Los Angeles-South Coast
City	Culver City
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4444
EDFZ	16
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.29

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Apartments Mid Rise	382	Dwelling Unit	2.14	383,673	0.00	—	1,131	—

High Turnover (Sit Down Restaurant)	5.77	1000sqft	0.00	5,772	0.00	—	—	—
Health Club	2.12	1000sqft	0.00	2,120	0.00	—	—	—
General Office Building	18.2	1000sqft	0.00	18,228	0.00	—	—	—
Other Non-Asphalt Surfaces	49.3	1000sqft	1.13	0.00	0.00	—	—	—
Enclosed Parking with Elevator	481	Space	0.00	183,173	0.00	—	—	—

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.27	annual days of extreme heat
Extreme Precipitation	5.20	annual days with precipitation above 20 mm

Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2

Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	37.6
AQ-PM	66.0
AQ-DPM	59.9
Drinking Water	25.9
Lead Risk Housing	32.9
Pesticides	0.00
Toxic Releases	82.1
Traffic	93.2
Effect Indicators	—

CleanUp Sites	78.3
Groundwater	90.0
Haz Waste Facilities/Generators	78.1
Impaired Water Bodies	66.7
Solid Waste	84.7

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	48.0
Healthy Places Index Score for Project Location (b)	84.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Land Uses and size informed from Comprehensive Plan Set and Data Needs Sheet. See assumption sheet for more details.
Construction: Construction Phases	Schedule specified by client
Construction: Off-Road Equipment	Equipment specified by client
Construction: Trips and VMT	worker, vendor, and haul trips modeled in emfac (off model)
Construction: Architectural Coatings	calculated in assumption sheet, see assumptions sheet for more details.
Operations: Hearths	no hearths confirmed by architect

Operations: Architectural Coatings	estimated in assumptions sheet, see for more details.
Operations: Energy Use	electricity added for open space outdoor land use. see assumptions sheet for estimation
Operations: Vehicle Data	VMT estimated by Fehr and Peers. Emissions estimated off model.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.27	annual days of extreme heat
Extreme Precipitation	5.20	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	37.6
AQ-PM	66.0

AQ-DPM	59.9
Drinking Water	25.9
Lead Risk Housing	32.9
Pesticides	0.00
Toxic Releases	82.1
Traffic	93.2
Effect Indicators	—
CleanUp Sites	78.3
Groundwater	90.0
Haz Waste Facilities/Generators	78.1
Impaired Water Bodies	66.7
Solid Waste	84.7

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	48.0
Healthy Places Index Score for Project Location (b)	84.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification

Land Use	Land Uses and size informed from Comprehensive Plan Set and Data Needs Sheet questions and responses from the construction team. See assumption sheet for more details.
Construction: Construction Phases	Schedule specified by client
Construction: Off-Road Equipment	Equipment specified by client
Construction: Trips and VMT	worker, vendor, and haul trips modeled in emfac (off model)
Construction: Architectural Coatings	calculated in assumption sheet, see assumptions sheet for more details.
Operations: Vehicle Data	Information related to traffic trips taken from Transportation Study for the Proposed Project
Operations: Hearths	no hearths, confirmed by architect
Operations: Architectural Coatings	estimated in assumptions sheet, see for more details.
Operations: Water and Waste Water	Water usage taken from WSA prepared for Project
Operations: Energy Use	electricity added for open space outdoor land use

	3044	725	1537	1501

Sources and Assumptions:

CalEEMod Appendix G, Table G-32

-Electricity Intensity Factors - California Emissions Estimator Model (CalEEMod).

-Estimated construction water use assumed to be generally equivalent to landscape irrigation, based on a factor of 20.94 gallons per year per square foot of landscaped area within the Los Angeles area (Mediterranean climate), which assumes high water demand landscaping materials and an irrigation system efficiency of 85%. Factor is therefore (20.94 GAL/SF/year) x (43,560 SF/acre) / (365 days/year) / (0.85) = 2,940 gallons/acre/day, rounded up to 3,000 gallons/acre/day. (U.S. Department of Energy, Energy Efficiency & Renewable Energy, Federal Energy Management Program. "Guidelines for Estimating Unmetered Landscaping Water Use." July 2010. Page 12, Table 4 - Annual Irrigation Factor – Landscaped Areas with High Water Requirements).

CalEEMod Water Electricity Factors	Electricity Intensity Factor To Supply (kWh/Mgal)	Electricity Intensity Factor To Treat (kWh/Mgal)	Electricity Intensity Factor To Distribute (kWh/Mgal)	Electricity Intensity Factor For Wastewater Treatment (kWh/Mgal)
	3044	725	1537	1501

Sources and Assumptions:

CalEEMod Appendix G, Table G-32

-Electricity Intensity Factors - California Emissions Estimator Model (CalEEMod).

-Estimated construction water use assumed to be generally equivalent to landscape irrigation, based on a factor of 20.94 gallons per year per square foot of landscaped area within the Los Angeles area (Mediterranean climate), which assumes high water demand landscaping materials and an irrigation system efficiency of 85%. Factor is therefore (20.94 GAL/SF/year) x (43,560 SF/acre) / (365 days/year) / (0.85) = 2,940 gallons/acre/day, rounded up to 3,000 gallons/acre/day. (U.S. Department of Energy, Energy Efficiency & Renewable Energy, Federal Energy Management Program. “Guidelines for Estimating Unmetered Landscaping Water Use." July 2010. Page 12, Table 4 - Annual Irrigation Factor – Landscaped Areas with High Water Requirements).

Re: 5800-5860 Hannum Avenue and 5751-5859 Uplander Way, Culver City, California
Tree Inventory Report

Dear Ms. Marks,

This letter provides the findings of our site visits on March 5, 12 and 20, 2024 to the property located at 5800-5860 Hannum Avenue and 5751-5859 Uplander Way in Culver City, California. Carlberg was retained to prepare a tree inventory report In accordance with the Culver City's Building Safety Division's Green Building Program and RIOS' Tree, Vegetation, and Natural Features instructions. We traversed the property to inventory and evaluate trees of all species and with trunk diameters of two inches or greater. We inventoried 334 private property trees. There are no City Street trees, California native trees, or trees whose canopies overhang the project boundaries.

We identified the tree species, assessed their health and structural condition, and approximated their heights and canopy spreads. Tree trunk diameters were recorded and trunk locations generally plotted on the topographic survey map provided to us. We include a column for 'Suitability for Preservation' to assist the design team in determining trees that could be incorporated into the landscape design. The major limiting factor among ratings is location: a tree on the perimeter of the site may be more desirable for retention than a tree on the interior of the property which is in conflict with site development.

Fifteen individual tree species comprise the total tree count of 334. Generally speaking, tree health (biological condition) is very good to excellent across all species. The glaring element throughout most of the interior of the site and in a few perimeter species is the poor pruning (topping) of a majority of the trees. Topping is a substandard pruning practice that typically removes whole tops of trees or large branches. Topping negatively affects tree health and structural condition and can lead to wood decay, poor branching structure, and a weakened ability to produce food.

In my opinion, the Canary Island pines and eucalyptus are the most outstanding features of the property and have not been topped or severely pruned. All but two of the 17 Canary Island pines and 26 of the lemon-scented eucalyptus are on the perimeter of the property along Uplander, Hannum, and Bristol. There are also a number of African fern pines along Hannum adjacent to the sidewalk; these smaller trees, aside from being overpruned, are excellent specimens for preservation.

Above: Showing a number of Canary Island pines at the corner of Hannum and Bristol.

Below: Showing lemon-scented gums and fern pines (arrows) along Hannum Avenue.

The enclosed Tree Photograph Exhibit illustrates each tree, site context, tree density, conformation, and vigor. The complete tree inventory table and a reduced copy of the Tree Location Map are included at the end of this report. Electronic copies of the tree inventory table (Excel) and Tree Location Map (PDF and AutoCAD) will be transmitted via email along with this report.

Table 1 on the following page summarizes the 15 types of trees found, their onsite, offsite, or street tree status, and how many of each type are included in the inventory.

TABLE 1 - SUMMARY OF INVENTORIED PROJECT SITE, IMMEDIATE OFFSITE AND IMMEDIATELY ADJACENT STREET TREES

COMMON NAME	BOTANICAL NAME	TOTAL NO. ONSITE	TOTAL NO. OFFSITE	TOTAL NO. STREET TREES	TOTAL NO. TREE SPECIES
African fern pine	*Afrocarpus falcatus*	14			14
Brazilian pepper	*Schinus terebinthifolia*	1			1
California pepper	*Schinus molle*	7			7
Callery pear	*Pyrus calleryana*	32			32
Canary Island date palm	*Phoenix canariensis*	4			4
Canary Island pine	*Pinus canariensis*	17			17
carrotwood	*Cupaniopsis anacardioides*	7			7
Chinese elm	*Ulmus parvifolia*	1			1
evergreen pear	*Pyrus kawakamii*	97			97
lemon-scented gum	*Corymbia citriodora*	93			93
London plane	*Platanus* x *hispanica*	45			45
Mexican fan palm	*Washingtonia robusta*	9			9
purple leaf plum	*Prunus cerasifera*	1			1
red ironbark	*Eucalyptus sideroxylon*	4			4
silver dollar gum	*Eucalyptus polyanthemos*	2			2
		334	**0**	**0**	**334**

This report compromises the deliverables needed to satisfy a tree inventory report. If select trees are to remain, the applicant may request an impact analysis, comprehensive tree report, and Tree Protection Plan.

Please feel welcome to contact me at our Sierra Madre office if you have any questions.

Respectfully submitted,

Cy Carlberg, Registered Consulting Arborist
Principal, Carlberg Associates

***Note*:** A list of acronyms and definitions are provided on the following pages.

*** DBH:** Diameter at Breast Height. A forestry term referring to a tree's trunk diameter measured at 4.5 feet above grade. Often used as a representation of tree size.

**** BT Ht:** Because palms do not generally increase in trunk diameter as they increase in size, they are measured by their Brown Trunk Height, the distance between grade and the base of the newest emerging spear (frond).

INTENTIONALLY BLANK

LIST OF ACRONYMS

ANTH – Anthracnose disease

BT – brown trunk – commonly used to measure palm tree trunk heights instead of diameters; it excludes the palm head, or canopy

CANK – canker – an area of dead tissue; can be caused by sunburn or disease

CLPD – common leaf pests and diseases (usually subcritical and non-lethal to tree)

COD – codominant stems or trunks – similar diameter trunks or stems arising from the same point of origin – can be a defect depending on the angle of attachment

Compass directions – N=north, E=east, S=south, W=west

DBH – Diameter at breast height (4 ft. 6 in. from grade) – a standard forestry term / protocol used for measuring tree trunk diameter

DSH – Diameter Standard Height – same as DBH but politically correct without the reference to breasts

DN – drippy nut (acorn) disease (common and non-lethal bacterial infection of acorns)

DW – dead wood

EG – epicormic growth – usually stress-induced growth that originates from previously dormant buds located on trunks or branches

GR – girdling root – can cause structural instability

HOB – history of breakage – usually refers to branches, not twiggy growth

HR – heart rot – decay of the heartwood

H2O – water or irrigation

IB – included bark – can cause structurally weak attachments

LCR – live crown ratio – a ratio of canopy foliage to bare trunk – informs structural grade, as low LCR can increase likelihood of failures

Lerp psyllid / Tipu psyllid – sap sucking insects

Lg - large

MBA – multiple branch attachments – can be a structural defect

Mech. Dam or MD – mechanical damage

MPE – multiple pruning events – can lead to reduced structural integrity based on secondary growth characteristics

P/D – pest/disease

PP – poor pruning – usually refers to stub cuts, flush cuts, excessive thinning, topping, etc.

Prune/DPR-QA - prune out dead/infested/diseased portion(s) & consult a licensed Department of Pesticide Regulation Qualified Applicator for potential chemical pest/disease treatments

RRD – root rot disease

SB – sycamore borer – a clear-winged moth that lays eggs on the bark of trees (mostly sycamore and oak species) – larvae burrow and feed in bark layer, usually non-damaging to tree

SS – stump sprouts – epicormic growth that arises from cut trunks – can originate from the remaining trunk tissue or the root crown

T – trunk

TG – Twig girdler – a stem girdling insect (this condition may also be noted under the umbrella of 'CLPD'

Topping cuts – refers to the substandard practice of arbitrarily pruning with no regard to lateral branch points; can include excessive and disfiguring pruning

WW – wound wood – callus tissue growing over a wound

Xylella = suspected bacterial infection with Xylella fastidiosa

GLOSSARY OF ARBORICULTURAL & DENDROLOGICAL TERMS

Abiotic: Non-living agents including environmental, physiological, & other nonbiological factors (i.e., aeration or water deficit, mechanical injury, or gas line leak).

***Arboriculture*:** Management of individual trees or groups of trees primarily for their amenity value.

***Basal wound*:** A cut or puncture at the base of the trunk of a tree, particularly bad in younger (developing) specimens. Often these wounds are caused by mowers and other gardening equipment and can be prevented by protective staking and the creation of dirt (no turf) surrounding areas - adjacent to the trunk.

Bleeding (from wood): Flow of sap, typically from pruning wounds.

Branch collar: The swelling at the base of a branch, to be left intact in any pruning.

Callus / wound wood: Lignified, partially differentiated tissue which develops from the callus associated with wounds.

Cambium / cambial: Meristematic tissue that gives rise to phloem & xylem.

Canker: An area of dead or malformed bark caused by a pathogen.

Canopy: A term used for the crown or spread of a tree's branches to emphasize its size and enclosing character. Parts of the tree above the trunk, including scaffold limbs, lateral branches, twigs, and leaves.
The canopy spread is often measured in feet.

Cavity: A void in a tree trunk, branch or root that may or may not be open to the exterior, generally created by decay. Over many years the wound may become entirely grown over (occluded) while the decay progresses within.

Co-dominant stems: Branches and *stems* that are nearly equal in size and relative importance

Compartmentalization: A form of defense in woody plants, in which barriers resistant to invasion by pathogens or wood decay fungi are laid down while the wood is living (sapwood), and which continue to act passively once the wood is incorporated into heartwood.

***Conifer*:** A botanical definition embracing trees with cones (ie. seeds not formed within ovaries), mostly with needle-like or scale-like leaves and mostly evergreen. Sometimes conifers are called 'softwoods'.

***Crotch*:** Where two branches of a tree intersect. A narrow crotch arise at an acute (narrow) angle, as when both branches are close to the vertical. The union is relatively weak if there is included bark.

Crown: The branches, twigs and foliage of a tree, considered collectively.

***Crown thinning, crown reduction and crown raising*:** Crown thinning removes branches from the crown without reducing the extent of the crown. Crown reduction decreases the extent of the crown without decreasing its density. Crown raising increases the headroom to the base of the canopy by removing lower branches.

Crown cleaning: The removal of dead, dying, damaged or diseased wood from the crown of a tree.

Deadwood: In the growth and development of a tree, branches compete with each other and weaker branches are eventually suppressed and die. The deadwood is then liable to fall (sometimes called 'natural pruning'). Deadwood develops naturally, largely in the inner and lower crown, of all trees that are mature and unmanaged.

***Decay*:** The progressive degradation of woody tissues caused by specialized fungi & bacteria through decomposition of cellulose & lignin. The pathogen typically enters through wounds in the roots (root rots), main

stem or branches (butt and stem rots) and can then extend internally, over a timescale of years or decades, longitudinally or horizontally.

Deciduous: Leaves are lost in winter, as opposed to evergreen.

Diameter at breast height (dbh): The diameter of a tree measured at height 4.5 feet above natural grade. Typically used as a representation of tree size.

***Dieback*:** Death of shoots or roots starting at the extremities.

***Dripline*:** The outermost edge of the tree's canopy. When depicted on a map, the dripline will appear as an irregular shape that follows the contour of the tree's branches as seen from overhead.

***Epicormic shoots*:** Shoots arising from the base of a tree, its trunk or main framework branches, from buds dormant more than one season. May be stimulated by pruning (which increases the light reaching the lower part of the tree), or indicative of damage or decline in the upper crown.

Evergreen: Foliated throughout the year (although there is a gradual turnover of leaves).

Flush cut: A pruning cut that removes the branch collar and/or part of the branch ridge, slowing the occlusion of the wound or damaging its compartmentalization.

***Framework*:** Typically, the main branches (sometimes also called scaffold branches), each of which supports a significant portion of the crown. They largely determine the shape of the tree's crown depending on their height of origin, orientation etc. There is no precise distinction between framework branches and other lesser branches.

Gall: Abnormal growth of leaves, buds, stems etc. in reaction to the presence of an intrusive parasite, often an insect or mite.

***Girdle/girdling*:** Damage that kills the bark all the way round the stem; such as caused by wires or ties that were never removed when the tree was young. That which circles & constricts the stem or roots causing death of phloem &/or cambial tissue.

Habit (growth habit): Giving a tree its characteristic form, for example owing to the stoutness and orientation (fastigiated, ascending, spreading, pendulous, weeping etc.) of a tree's branches.

Hanger: Dead branch fallen from the crown but caught by, and resting on, branches lower down, which be liable to fall.

Heart rot: Decay in the center of the tree (heartwood).

***Included bark*:** Areas of bark on adjacent parts of a tree, typically on the inner faces of a narrow fork, which becomes grown over to occupy part of the internal joint. The bark-to-bark contact is weaker than the more usual woody union.

Lateral branch / limb: The next order of branch that rises from the scaffold limbs.

Leader: The topmost vertical shoot of a tree, present if the tree has strong apical dominance, characteristic of young trees and conifers. Trees with a rounded crown have no leader.

Mulch: a material (such as decaying leaves, bark, or compost) spread around or over a plant to enrich or insulate the soil.

***Parasite*:** An organism that exploits another, e.g., for food, to the prejudice of the host. Parasites may kill their hosts, be pathogenic or have little significant effect.

***Pathogen*:** A kind of parasite that causes disease.

Phloem: A transport tissue characterized by sieve tubes and companion cells, found the vascular bundles of higher plants. Functions in the transport of dissolved organic substances by translocation.

Photosynthesis: The chemical process by which chlorophyll-containing plants use light to convert carbon dioxide and water into carbohydrates, releasing oxygen as a by-product.

Pruning: The cutting off or cutting back of shoots or branches from a tree, whether to direct growth (formative pruning), make safe, to remove an obstructing or diseased part, to increase longevity (veteran trees), to maintain productivity (fruit trees) etc.

Root crown /collar / Root flare: The outwardly curving base of a tree where it joins the roots, often distinguishable as individual root buttresses.

Root crown inspection: Extensive examination of the junction of root & stem, including the area immediately below, aimed at determining stability, presence of disease, decay, etc.

Root zone: The area of ground around the base of a tree that supports root growth; often extends far beyond the dripline of a tree.

***Scaffold branch / limb*:** The first order of limbs or branches that arise from the trunk of a tree.

Soil: A mixture of mineral particles, often of various sizes due to weathering, roots and other living things, soil organic matter and the associated voids (pores) filled with air and/or water.

Soil aeration: The movement of gases in soil, primarily by diffusion through the soil pores. For example, oxygen diffuses from the atmosphere to the vicinity of the plant root while carbon dioxide diffuses in the opposite direction. The rate of diffusion is related to the proportion of the soil volume that contains air

Soil compaction: An increase in bulk density due to the pressure exerted by animals, vehicles, (locally) by root growth *etc*. Pore space is reduced, which may also restrict soil aeration, water infiltration and drainage.

Soil structure: The aggregation of soil particles into clumps (peds) of various shapes and the associated spaces between them, affecting many properties of soil including its porosity to air and water, and its fertility.

Soil texture: The size of the mineral particles in the soil, classified (from fine to coarse) as clay, silt, sand, gravel or stones, or some mixture of these to give a characteristic particle size distribution. Sandy soils give a light texture, clayey soils give a heavy texture.

***Stub*:** That part of a pruned branch protruding beyond the branch collar. It is not good practice to leave stubs since they impede occlusion and are prone to decay.

Suckers: Shoots arising from the roots of a tree, which can arise surprisingly far from the parent.

Target: A target is the subject of injury or damage within range of a tree hazard

***Topping*:** A kind of pruning in which the branches of a tree are all decapitated to reduce the tree to a specific height. An indiscriminate form of pruning not regarded as good practice, to which some trees, such most conifers, are intolerant.

Training: To change the shape of a tree by means other than (formative) pruning, typically by tying young branches into a particular position.

***Transpiration*:** Loss of water vapor from the surface of leaves & other aboveground parts of the plant.

***Vigor / vigorous*:** Overall health; the capacity to grow & resist physiological stress.

DEFINITION OF HEALTH AND STRUCTURE GRADES

Health and structure ratings of the trees are based on the archetype tree of the same species through a subjective evaluation of its physiological health, aesthetic quality, and structural integrity.

Overall physiological condition (health) and structural condition were rated A-F:

Health

A) Outstanding – Exceptional trees of good growth form and vigor for their age class; exhibiting very good to excellent health as evidenced by normal to exceptional shoot growth during current season, good bud development and leaf color, lack of leaf, twig or branch dieback throughout the crown, and the absence of decay, bleeding, or cankers. Common leaf and/or twig pests may be noted at very minor levels.

B) Above average – Good to very good trees that exhibit minor necrotic or physiological symptoms of stress and/or disease; shoot growth is less than reasonably expected, leaf color is less than optimal in some areas, the crown may be thinning, minor levels of leaf, twig, and branch dieback may be present, and minor areas of decay, bleeding, or cankers may be manifesting. Minor amounts of epicormic growth may be present. Minor amounts of fire damage or mechanical damage may be present. Still healthy, but with moderately diminished vigor and vitality. No significant decline noted.

C) Average – Average, moderately good trees whose growth habit and physiological or fire-induced symptoms indicate an equal chance to either decline or continue with good health into the near future. Most of these trees exhibit moderate to significant small deadwood in outer crown areas, decreased shoot growth and diminished leaf color and mass. Some stem and branch dieback are usually present and epicormic growth may be moderate to extensive. Cavities, pockets of decay, relatively significant fire damage, bark exfoliation, or cracks may be present. Moderate to significant amounts of insect or disease symptoms may be present; the tree may be shaded or crowded in such a way that it is expected to negatively impact the lifespan of the tree. Tree may be in early decline.

D) Below Average/Poor - trees whose growth habit and physiological or fire-induced symptoms indicate significant, irreversible decline. Most of these trees exhibit significant dieback of wood in the crown, possibly accompanied by significant epicormic sprouting. Shoot growth and leaf color and mass is either significantly diminished or nonexistent throughout the crown. Cavities, pockets of decay, significant fire damage, bark exfoliation, and/or cracks may be present. Significant amounts of insect or disease symptoms may be present; the tree may be shaded or crowded in such a way that it has negatively impacted the lifespan of the tree. Tree appears to be in irreversible decline.

F) Dead or in spiral of decline – this tree exhibits very little to no signs of life.

STRUCTURE

A) Outstanding – Trees with outstanding structure for their species exhibit trunk and branch arrangement and orientation that result in a sturdy form or architecture that resists failure under normal circumstances. The spacing, orientation, and size of the branches relative to the trunk are quintessential for the species and free from defects. No outward sign of decay or pathological disease is present. Some trees exhibit naturally inherent branching defects, like multiple, narrow points of attachment from one point on the trunk, which would preclude them from achieving an “A” grade.

B) Above average - Trees with good to very good structure for their species. They exhibit trunk and branch arrangement and orientation that result in a relatively sturdy form or architecture that resists failure under normal circumstances, but may have some mechanical damage, over-pruning, or other minor structural defects. The spacing, orientation, and size of the branches relative to the trunk are still in the normal range for the species, but they exhibit a minor degree of defects. Minor, sub-critical levels of decay or pathological disease may be present, but the degree of damage is not yet structurally significant. Trees that exhibit naturally inherent branching defects, like multiple, narrow points of attachment from one point on the trunk, would generally fall in to this category. A small percentage of the canopy may be shaded or crowded, but not in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree.

C) Average - Trees with moderately good structure for their species, but with obvious defects. They exhibit trunk and branch arrangement and orientation that result in a less than sturdy form or architecture, which reduces their resistance to failure under normal circumstances. Moderate levels of mechanical damage, over-pruning, or other structural defects may be present. The spacing, orientation, and size of some of the branches relative to the trunk are not in the normal range for the species. Moderate to significant levels of decay or pathological disease may be present that increase the likelihood of structural instability. Influences such as an excessive trunk lean, slope erosion, root pruning, or other growth-inhibiting factors may be present. A moderate to significant percentage of the canopy may be shaded or crowded in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree. Risk of full or partial failure in the near future appears to be moderately elevated.

D) Well Below Average/Poor - Trees poor structure for their species and with obvious defects. They exhibit trunk and branch arrangement and orientation that result in a significantly less than sturdy form or architecture, significantly reducing their resistance to failure under normal circumstances. Significant levels of mechanical damage, over-pruning, or other structural defects may be present. The spacing, orientation, and size of many of the branches relative to the trunk are not in the normal range for the species. Significant levels of decay or pathological disease may be present that increase the likelihood of structural instability. Influences such as an excessive trunk lean, slope erosion, root pruning, or other growth-inhibiting factors may be present. A significant percentage of the canopy may be shaded or crowded in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree. Risk of full or partial failure in the near future appears to be advanced.

F) Severely Compromised – trees with very poor structure and numerous or severe defects due to growing conditions, historical or recent pruning, mechanical damage, history of limb or trunk failures, advanced decay, disease, or severe fire damage. Risk of full or partial failure in the near future appears to be severe.

ARBORIST DISCLOSURE STATEMENT

Arborists are tree specialists who use their education, knowledge, training and experience to examine trees, recommend measures to enhance the beauty and health of trees, and attempt to reduce the risk of living near trees. Clients may choose to accept or disregard the recommendations of the arborist, or to seek additional advice.

Arborists cannot detect every condition that could possibly lead to the structural failure of a tree. Trees are living organisms that fail in ways we do not fully understand. Conditions are often hidden within trees and below ground. Arborists cannot guarantee that a tree will be healthy or safe under all circumstances, or for a specified period of time. Likewise, remedial treatments, like any medicine, cannot be guaranteed.

Treatment, pruning and removal of trees may involve considerations beyond the scope of the arborist's services such as property boundaries, property ownership, site lines, disputes between neighbors, and other issues. Arborists cannot take such considerations into account unless complete and accurate information is disclosed to the arborist. An arborist should then be expected to reasonably rely upon the completeness and accuracy of the information provided.

Trees contribute greatly to our enjoyment and appreciation of life. Nonetheless, they are subject to the laws of gravity and physiological decline. Therefore, neither arborists nor tree owners can be reasonably expected to warrant unfailing predictability or elimination of risk.

Trees can be managed, but they cannot be controlled. To live near trees is to accept some degree of risk. The only way to eliminate all risk associated with trees is to eliminate all trees.

Memorandum

To Andy Beck, Vice President, Multifamily Development
Link Logistics

Project: 5800-5860 Hannum Avenue, 5751-5859 Uplander Way, & 5835 Sumner Way, Culver City, CA
Project No.: 231220
Date: February 12, 2024
Via: E-mail: abeck@linklogistics.com

Architectural Resources Group (ARG) has prepared this memorandum to provide our professional opinion regarding the potential eligibility of the property located at 5800-5860 Hannum Avenue, 5751-5859 Uplander Way, and 5835 Sumner Way, Culver City, CA, against federal (National Register of Historic Places), state (California Register of Historical Resources), and local (Culver City Cultural Resources) eligibility criteria. Currently known as the "Culver City Business Park,"[1] the property is developed with four commercial office and light industrial/manufacturing buildings constructed between 1979-1980.

None of the buildings within the Culver City Business Park have been formally designated under any federal, state, or local registration program, and none are listed in the California Built Environment Resource Directory (BERD). Furthermore, none of the buildings were identified through Culver City's 1987-88 Historic Structures Field Survey, or any other historical resources survey.

Upon additional, limited property-specific research and a site inspection of the property on January 10, 2024, ARG has preliminarily determined that none of the buildings at 5800-5860 Hannum Avenue, 5751-5859 Uplander Way, and 5835 Sumner Way appear to be eligible for listing in the National Register, California Register, or as a Culver City Cultural Resource. Following is a discussion regarding how this finding was made.

[1] The name "Culver City Business Park" is contemporary and does not appear in historic newspaper articles associated with the property's development.

Physical Description

The subject property is located at the center of the Fox Hills Business Center, a large commercial business park built between 1972-1982 and bound by Hannum Avenue, Green Valley Circle, Buckingham Parkway, and Fox Hills Drive. The property comprises four parcels developed with four commercial office and light industrial/manufacturing buildings constructed between 1979-1980 and now known as Culver City Business Park. The business park consists of approximately 8.3 acres roughly bound by Hannum Avenue to the north, Uplander Way to the south and east, and Bristol Parkway to the west. The topography of the site slopes upward from north to south, and the northernmost building (Building A/B) is raised slightly above street level along Hannum Avenue. Clockwise from north to south, the property includes Building A/B (APN 4134-005-021; primary address 5800 Hannum Ave.), Building C (APN 4134-005-004; primary address 6031 Uplander Way), Building F (APN 4134-005-003; primary address 5821 Uplander Way), and Building E (APN 4134-005-002; primary address 5835 Sumner Way). The buildings are surrounded by paved surface parking lots, and a variety of shade trees, hedges, and lawn line the perimeter. To the east of Building E is another commercial office building (6070-6076 Bristol Parkway), which was constructed in 1979 and was part of the same development as the subject buildings. To the north of this building is a fire station, which was constructed ca. 1982 as part of the greater Fox Hills Business Center development.

Completed between 1979-1980, all four of the subject buildings are two stories in height with flat roofs. With the exception of Building A/B, which has a C-shaped plan, the buildings have rectangular footprints. Exterior walls of the buildings consist of raked precast concrete panels with smooth precast concrete eaves. All of the buildings' primary façades follow the same motifs—they are delineated by grouped double-height entry bays consisting of fully glazed metal doors surrounded by tinted glazing. Second-story windows with alternating glazed spandrels project from the façades, forming window bays above the entrances. Between each bay, walls are clad in precast raked concrete panels. Secondary façades typically consist of an arrangement of fixed metal doors surrounded by tinted glazing and glazed transoms. Between glazing, the walls are clad in precast raked concrete panels. Each building has a loading dock at rear with metal doors and cargo loading bays. The loading dock for Building A/B is on the south façade, the loading dock for Building C is on the north façade, the loading dock for Building E is on the east façade, and the loading dock for Building F is on the west façade.

Aerial view of the subject property, delineated by a dashed red line. The subject buildings are highlighted in blue, and the dashed white line represents the extent of the greater Fox Hills Business Center development (Google Maps, adapted by ARG, 2023).

Chronology of Development and Use

Building A/B

As noted in the below table, work on Building A/B has been minor and largely limited to building maintenance (i.e. re-roofing). Based on ARG's visual inspection, the exterior of the building appears largely unaltered from its original construction.

Date Issued	Permit No.	Owner/Lessee	Architect/Builder	Scope of Work
Feb. 16, 1978	A24172	Fox Hills Investment Co.	Contractor is Fox Hills Investment Co. (owner-builder)	Grading for site
Apr. 6, 1979	A23261	Fox Hills Investment Co.	Architect is Matlin & Dvoretzky, AIA	New office building construction
Aug. 20, 1979	A23474	Fox Hills Investment Co.	Contractor is Feldman Construction	Block planters, retaining walls, and trash enclosures
Feb. 28, 1980	A23977	Fox Hills Investment Co.	Contractor is Feldman Construction	Exterior enclosure of mechanical equipment
Nov. 20, 1990	B23552	Cigna Health Plans of California	Architect is Orcutt/Winslow Partnership	Remodel of an existing two-story office into a multi-specialty facility
Feb. 27, 1992	B27541	Public Storage	Contractor is Scholten Roofing Service	Overlay of existing cap sheet roof with a cold-process polyester and emulsion system
Sept. 26, 2002	B57913	P.S. Business Park	Contractor is Rosscrete Roofing Inc.	Re-roof, tear off existing hot mop roofing, install new class "A" 4-ply, no asbestos

In addition to the minor alterations noted above, permit records indicate that Building A/B has undergone several phases of interior tenant improvements dating from the 1980s through the mid-2010s.

Building A/B has been occupied by a variety of tenants since its 1979 completion, including IT software company Software Centre International, security services company Guardsmark, Inc., promotional products distributor Geiger Bros./West, and physical therapy provider NovaCare, Inc.[2]

Building C

The only permits available for Building C are related to electrical work completed in 1979 during the building's construction (Permit Nos. B12956 and B12998). Based on ARG's visual inspection, the building exterior appears largely unaltered from its initial development.

A number of tenants have occupied Building C since its 1979 completion, including a Budget Rent-A-Car district sales office, computer aided design and manufacturing (CAD/CAM) company Computervision Corporation, visual field software company Peridata International, technology services firm Century Computer Brokers, wireless provider Platinum Wireless, and legal services provider Consumer Legal Services.[3]

Building E

The only permits available for Building E are for the construction of retaining walls, completed in 1978 during the building's initial development (Permit No. A22151). Based on ARG's site inspection, Building E is largely unchanged from its original construction.

[2] City of Culver City Department of Building and Safety, various building permits; *Los Angeles Times*, classified advertisements, various dates.
[3] City of Culver City Department of Building and Safety, various building permits; *Los Angeles Times*, classified advertisements, various dates.

Building E has been leased by a variety of tenants since its 1980 completion, including architecture model-making firm Dimensional Presentations, Inc., software specialists Bateman, Inc., custom wayfinding sign company ASI Sign Systems, and dentist Marjan Roshangar, D.D.S.[4]

Building F

As noted below, the only building permits available for Building F were related to its initial construction. Based on ARG's visual inspection, the building is largely unaltered from its 1979 completion.

Date Issued	Permit No.	Owner/Lessee	Architect/Builder	Scope of Work
Apr. 14, 1978	A21971	Fox Hills Investment Co.	Architect is Matlin & Dvoretzky; Contractor is Owner-Builder	New commercial and industrial building
Oct. 24, 1978	A22540	Ed Marks	Contractor is Feldman Construction	Install new non-bearing partitions and new hung ceiling
Nov. 15, 1978	A22637	Ed Marks	Contractor is Feldman Construction	Install new non-bearing partitions and new ceilings as show in plan
Dec. 8, 1978	A22666	Ed Marks	Contractor is Feldman Construction	Addition of 24x48 one story (Also listed as Interior Partitions)

Since its completion, Building F tenants have included discount clothing company L.A. Clothes Distributors; solar hydrogen company Consumers Solar Electric Power Corp; electronic security company Sensormatic Electronics Corporation; Bekins Company moving/storage business; ACE

Pest Control; Video Dimensions motion picture production company; landscape design firm LRM Ltd; and software and communications companies Touchbase Systems, Applied Geosystems, and MFS Network Technologies.[5]

Historical Background Summary

The subject property is located within the Fox Hills Business Center, an expansive office development built in the late 1970s and early 1980s by Koll Co., with oversight from the Culver City Redevelopment Agency. The $25-million business center comprised 55 acres between Hannum Avenue, Green Valley Circle, Buckingham Parkway, and Fox Hills Drive. During its construction, it was described as a "planned business environment in the heart of the highly desirable West Side," with "rigid architectural controls, generous landscaping, spread-out clusters of low-rise office buildings and [a] park-like setting."[6] Upon its completion in 1982, the business center consisted of 64 buildings with a variety of tenants including insurance and design firms, banks, property management companies, and several technology firms.[7] Due to the substantial number of computer firms that had offices in Fox Hills, the business complex had become known as Byte Hill or "the little Silicon Valley" by the early 1980s. Major tech businesses that occupied the center in the 1980s included Apple Computer Inc., Wang Laboratories Inc., Cybertek Computer Products Inc., and Digital Equipment Corp.[8] Per aerial photographs, the Fox Hills Business Center appears largely unchanged since its original development.

Plans for construction of the subject property were conditionally approved by the Culver City Redevelopment Agency in December of 1977 as part of Slauson-Sepulveda Redevelopment Project No. 1. The original proposed development included six office-manufacturing buildings[9] on 10.3 acres within the larger Fox Hills Business Center. The development was owned by Fox Hills

[8] John L. Mitchell, "Byte Hill: So Many Computer Firms Have Moved to Fox Hills Business Park That Culver City Officials Call It Local Version of Silicon Valley," *Los Angeles Times*, September 4, 1983.
[9] 1978 plans for the development showed Building A/B as two separate buildings; however, Building A/B was ultimately constructed as a single structure. The original development also included the building at 6070-6076 Bristol Parkway, east of Building E. This building is currently owned by a separate entity and is not considered part of the Culver City Business Park.

Investment Co., and Mark IV Construction Inc. was the contractor.[10] A permit for site grading was issued in January of 1978, and construction of retaining walls began in summer of the same year.[11] All four subject buildings were completed between 1979-1980. Based on original building permit records, architect Carl C. Li of the Santa Monica architecture firm Matlin & Dvoretzky was responsible for the designs of Building A/B and Building F. Given their very similar designs and identical construction materials, it is assumed the firm also designed Building C and Building E.[12] Certificates of Occupancy were issued between June of 1979 and May of 1980.[13] Original owner Fox Hills Investment Co. does not appear to have ever occupied any of the buildings, but rather leased space out to various companies, including design firms, software, communications and security companies, storage companies, and healthcare service providers. P.S. Business Parks (originally a division of Public Storage), who acquired the buildings in 1990, similarly leased space out to a rotating door of technological, commercial, and industrial businesses.[14] Link Logistics currently owns the buildings.

Evaluation of Significance

Upon preliminary investigation, ARG finds that the four subject buildings at 5800-5860 Hannum Avenue, 5751-5859 Uplander Way, and 5835 Sumner Way, are not eligible for listing in the National Register of Historic Places or California Register of Historical Resources, or under Culver City's Historic Preservation Program (Chapter 15.05 of the City's Municipal Code). Following is an explanation of how this finding was made.

Completed between 1979-1980, the subject buildings are 44-45 years old at the writing of this memorandum, which is generally too young to be considered a historical resource under federal, state, and local registration programs.

Per National Register Criteria Consideration G, in general, a resource must be at least 50 years of age or be of exceptional importance in order to be eligible for listing in the National Register.[15]

[11] City of Culver City Department of Building and Safety, Permit A22151, 06/01/78.
[12] Original building permits were not located for Buildings C and E.
[13] City of Culver City, Division of Planning and Community Development, Certificates of Occupancy, 5/21/80 and 6/20/79.
[14] City of Culver City Department of Building and Safety, various building permits.
[15] National Park Service, National Register Bulletin 15: *How to Apply the National Register Criteria For Evaluation* (Washington D.C.: U.S. Department of Interior, 1990), 41-43.

Similarly, per Section 15.05.020 of Culver City's Municipal Code, in order to be considered for local historic designation, a structure must be at least 50 years old or have special importance to the City.[16] Unlike the National Register's and Culver City's 50-year age requirement, there is no prescribed age limit for listing in the California Register. However, guidelines state that sufficient time must have passed to obtain a scholarly perspective on the events or individuals associated with a resource.[17]

Constructed between 1979-1980, the four subject buildings were designed by the architecture firm Matlin & Dvoretzky. While the Santa Monica-based firm designed myriad commercial and residential buildings in the 1970s and 1980s, research did not suggest they rose to the level of a master. Furthermore, the subject buildings are modest and vernacular in appearance, and it cannot be said they are representative of a master architect or designer. The buildings are among dozens of office buildings constructed in Culver City during the late 1970s and early 1980s and are not singularly significant for representing this period of the city's development. Since their completion, they have been occupied by employees working for a variety of design firms; software, communications and security companies; storage companies; and healthcare service providers, none of which appear to be historically significant. The buildings do not appear to have any historical associations with significant events or individuals that would render them of exceptional or special importance in Culver City, the greater Southern California region, or the nation. Furthermore, their relatively recent construction dates hinder the ability to evaluate their historical significance within a scholarly perspective. For these reasons, the subject buildings do not appear individually eligible for listing in the National Register, California Register, or as a Culver City Landmark or Significant Structure.

In addition, the buildings do not appear to be eligible as contributors to a potential historic district. As previously described, the buildings were part of the same 10.3-acre development planned and owned by Fox Hills Investment Co. The buildings comprised a small portion of the larger 55-acre Fox Hills Business Center, which was constructed between 1978-1982. While the Fox Hills Business Center represents a development of architecturally cohesive office buildings that housed a number of notable technology companies by the early 1980s, the complex is less than 50 years old. Research did not indicate that the business center has made contributions to the development of Culver City or the larger region that would be considered of exceptional or

[17] California Office of Historic Preservation, *Technical Assistance Series #6: California Register and National Register: A Comparison* (Sacramento, CA: California Department of Parks and Recreation, 2001), 3.

special importance to the city, state, or nation. Taking into account the high eligibility thresholds associated with resources of the recent past, the Fox Hills Business Center does not appear to be eligible for listing in the National Register, California Register, or as a Culver City Historic District.

Conclusion

In conclusion, based on preliminary research and analysis, it is ARG's professional opinion that the four subject buildings at 5800-5860 Hannum Avenue, 5751-5859 Uplander Way, and 5835 Sumner Way do not appear to meet individual eligibility requirements for listing in the National Register, the California Register, or as a Culver City Landmark or Significant Structure. Furthermore, they do not appear eligible as contributors to a potential historic district.

EXECUTIVE SUMMARY

B9 Sequoia Culver City Owner LP, the Applicant, proposes to develop a mixed-use residential and commercial project (Project) on an approximately 8.34-acre site (Project Site) located at 5800 Hannum Avenue, 6031 Uplander Way, 5821 Uplander Way, and 5835 Sumner Way, Bldg E, within the Fox Hills neighborhood of the City of Culver City (City). **Environmental Science Associates (ESA)** prepared this archaeological resource assessment to identify and evaluate the potential impacts to archaeological resources associated with the Project for the purpose of complying with the California Environmental Quality Act (CEQA). The scope of work for this assessment included conducting a cultural resources records search through the California Historical Resources Information Center-South Central Coastal Information Center (CHRIS-SCCIC), a Sacred Lands File (SLF) search through the Native American Heritage Commission (NAHC), land use history research, a geologic map review, review of a site-specific geotechnical report prepared for the Project, a pedestrian survey, a subsurface archaeological sensitivity assessment, and the recommendation of mitigation measures to reduce impacts from the Project to archaeological resources to a less than significant level. The City is the lead agency for the Project pursuant to CEQA.

The records search through the CHRIS-SCCIC revealed that two precontact archaeological resources (CA-LAN-67 and -216) have been recorded within the 0.50-mile radius of the Project Site. Additionally, four precontact archaeological resources (CA-LAN-59, -60, -213, -2768) have been recorded in the immediate vicinity, albeit outside, of the 0.50-mile radius. The records search through NAHC's SLF yielded negative results; however, the NAHC noted that the absence of site information does not mean the absence of cultural resources in a project area.

ESA conducted a pedestrian survey for approximately 10 percent of the Project Site, as the remaining 90 percent is developed with buildings, parking lots, and walkways and lacks ground surface visibility. The survey of the surveyable portion of the Project Site (approximately 10 percent) targeted sections of land with exposed ground surface (e.g., green belts and landscape areas) and yielded less than 5 percent ground surface visibility. No precontact or historic period archaeological resources were identified during the survey, but this could be due to the developed nature of the Project Site.

A subsurface archaeological sensitivity assessment indicates that the potential for encountering buried precontact archaeological resources during construction is moderate to high since six precontact archaeological resources, water sources, and Native American villages were formerly located in the vicinity of the Project Site. Moreover, one of the geologic units (Qop, Paleosol soils) mapped at the surface and at depth within the Project Site is conducive to retaining precontact archaeological resources given its age. Additionally, fill soils occur within the Project Site from its surface to 5 feet below ground surface. A previous development project in Downtown Culver City yielded two precontact metates in similar disturbed fill sediments. However, the subsurface archaeological sensitivity assessment for historic archaeology—as opposed to precontact archeological resources, which are from an earlier time period—indicates that no previous historic uses have existed within the Project Site and that no historic-

period archaeological resources have been previously recorded within the Project Site or 0.50-mile radius. Based on these results, the potential to encounter buried historic-period archaeological resources during construction of the Project is considered low. ESA recommends implementation of mitigation measures to reduce impacts to buried precontact archaeological resources, which are provided in the *Summary of Results and Recommended Mitigation Measures* section of this report. With implementation of these measures, impacts to archaeological resources would be less than significant under CEQA.

5757 UPLANDER PROJECT

Archaeological Resources Assessment Report

Introduction

B9 Sequoia Culver City Owner LP, the Applicant, proposes to develop a mixed-use residential and commercial project (Project) on an approximately 8.34-acre site (Project Site) located at 5800 Hannum Avenue, 6031 Uplander Way, 5821 Uplander Way, and 5835 Sumner Way, Bldg E, within the Fox Hills neighborhood of the City of Culver City (City). **Environmental Science Associates (ESA)** prepared this archaeological resource assessment to identify and evaluate the potential impacts from the Project to archaeological resources for the purpose of complying with the California Environmental Quality Act (CEQA). The scope of work for this assessment included conducting a cultural resources records search through the California Historical Resources Information Center-South Central Coastal Information Center (CHRIS-SCCIC), a Sacred Lands File (SLF) search through the Native America Heritage Commission (NAHC), land use history research, a geologic map review, review of a site-specific geotechnical report prepared for the Project, a pedestrian survey, a subsurface archaeological sensitivity assessment, and the recommendation of mitigation measures to reduce impacts from the Project to archaeological resources to a less than significant level. The City is the lead agency for the Project pursuant to CEQA.

ESA personnel involved in the preparation of this Report are as follows: Fatima Clark, B.A., Project Manager and report author; Kyle Garcia, M.A., RPA, Senior Reviewer; and Jaclyn Anderson, GIS specialist. Resumes of key personnel are included in **Appendix A**.

Project Location

The Project Site is located at 5800 Hannum Avenue, 6031 Uplander Way, 5821 Uplander Way, and 5835 Sumner Way, Bldg E, within the City's limits (**Figure 1**). It is bound by Hannum Avenue to the north, Uplander Way to the south and east, and Bristol Parkway to the west (**Figure 2**). The Project Site is situated within Section 19 of Township 2 South, Range 14 West on the Venice, California U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle (**Figure 3**).

Figure 3
Project Location

ESA

Project Description

The Project would demolish the existing surface parking, landscaping and four, one- to two-story office buildings and construct three new seven-story mid-rise buildings with a maximum height of 88 feet and six inches. The Project would provide private and common open space for residents. Each of the three buildings would have its own dedicated parking areas located within a combination of subterranean (up to two levels) and podium parking levels. The Project would include a total of 1,304 vehicular parking spaces (1,283 residential and 21 commercial). Four points of vehicular access would be provided to the Project Site, including three driveways along Uplander Way (two on the east and one on the south) and a driveway connecting to Bristol Parkway. The maximum depth of ground disturbance would reach depths of up to 25 feet below ground surface (bgs), although building footings could extend to approximately 28 feet bgs.

Regulatory Framework

Cultural resources fall within the jurisdiction of several levels of government. The framework for the identification and, in certain instances, protection of cultural resources is established at the federal level, while the identification, documentation, and protection of such resources are often undertaken by state and local governments. As described below, the principal Federal, State and local laws governing and influencing the preservation of cultural resources of national, State, regional, and local significance include the following:

1. Section 106 of the National Historic Preservation Act
2. National Register of Historic Places
3. Archaeological Resources Protection Act of 1979
4. Native American Graves Protection and Repatriation Act of 1990
5. Secretary of the Interior's Standards
6. The California Environmental Quality Act (CEQA)
7. The California Register of Historical Resources (California Register)
8. The California Health and Safety Code (HSC)
9. The California Public Resources Code (PRC)
10. California Government Code Sections
11. City of Culver City General Plan

Federal

Section 106 of the National Historic Preservation Act

The principal federal law addressing historic properties is the National Historic Preservation Act (NHPA), as amended (54 USC 300101 et seq.), and its implementing regulations (36 CFR Part 800). Section 106 of the NHPA requires a federal agency with jurisdiction over a proposed federal action (referred to as an "undertaking") to take into account the effects of the undertaking on historic properties, and to provide the Advisory Council on Historic Preservation (ACHP) an opportunity to comment on the undertaking.

The term "historic properties" refers to "any prehistoric or historic district, site, building, structure, or object included in, or eligible for inclusion in, the National Register" (36 CFR Part 800.16(*l*)(1)). The implementing regulations (36 CFR Part 800) describe the process for identifying and evaluating historic properties, for assessing the potential adverse effects of federal undertakings on historic properties, and seeking to develop measures to avoid, minimize, or mitigate adverse effects. The Section 106 process does not require the preservation of historic properties; instead, it is a procedural requirement mandating that federal agencies take into account effects to historic properties from an undertaking prior to approval.

The steps of the Section 106 process are accomplished through consultation with the State Historic Preservation Officer (SHPO), federally recognized Indian tribes, local governments, and other interested parties. The goal of consultation is to identify potentially affected historic properties, assess effects to such properties, and seek ways to avoid, minimize, or mitigate any adverse effects on such properties. The agency also must provide an opportunity for public involvement (36 CFR 800.1(a)). Consultation with Indian tribes regarding issues related to Section 106 and other authorities (such as NEPA and Executive Order No. 13007) must recognize the government-to-government relationship between the Federal Government and Indian tribes, as set forth in Executive Order 13175, 65 FR 87249 (November 9, 2000), and Presidential Memorandum of November 5, 2009.

Under NHPA, the Secretary of Interior is responsible for establishing professional standards and for providing guidance on the preservation of the nation's historic properties. See below discussion of these standards.

National Register of Historic Places

The National Register of Historic Places (National Register) was established by the NHPA as "an authoritative guide to be used by federal, State, and local governments, private groups and citizens to identify the Nation's historic resources and to indicate what properties should be considered for protection from destruction or impairment" (36 CFR 60.2).[1] The National Register recognizes a broad range of cultural resources that are significant at the national, state, and local levels and can include districts, buildings, structures, objects, prehistoric archaeological sites, historic-period archaeological sites, traditional cultural properties, and cultural landscapes. As noted above, a resource that is listed in or eligible for listing in the National Register is considered "historic property" under Section 106 of the NHPA.

[1] U.S. Department of the Interior. 2002. *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation*, National Park Service, Washington, D.C.

To be eligible for listing in the National Register, a resource must be significant in American history, architecture, archaeology, engineering, or culture. Districts, sites, buildings, structures, and objects of potential significance must meet one or more of the following four established criteria:

A. Are associated with events that have made a significant contribution to the broad patterns of our history;

B. Are associated with the lives of persons significant in our past;

C. Embody the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or

D. Have yielded, or may be likely to yield, information important in prehistory or history.

In addition to meeting one or more of the criteria of significance, a property must have integrity. Integrity is defined as "the ability of a property to convey its significance". The National Register recognizes seven qualities that, in various combinations, define integrity. The seven factors that define integrity are location, design, setting, materials, workmanship, feeling, and association. To retain historic integrity a property must possess several, and usually most, of these seven aspects. Thus, the retention of the specific aspects of integrity is paramount for a property to convey its significance.

Ordinarily religious properties, moved properties, birthplaces or graves, cemeteries, reconstructed properties, commemorative properties, and properties that have achieved significance within the past 50 years are not considered eligible for the National Register unless they meet one of the Criteria Considerations (A-G), in addition to meeting at least one of the four significance criteria and possessing integrity.

Archaeological Resources Protection Act of 1979

The Archaeological Resources Protection Act of 1979 (ARPA) (16 USC 470aa-470mm) was enacted to "secure, for the present and future benefit of the American people, the protection of archaeological resources and sites which are on public lands and Indian lands, and to foster increased cooperation and exchange of information between governmental authorities, the professional archaeological community, and private individuals." Under this Act, archaeological resources are defined as material remains of past human life or activities that are of archaeological interest and are over 100 years old. The primary focus of the Act is to protect archaeological resources on public and Indian lands, and to prevent looting and destruction of archaeological resources. The statute provides for stiff civil and criminal penalties, including fines up to $100,000 and/or 5 years in prison for second-time offenders. The Act also governs archaeological excavation and disposition of collections from sites on public and Indian lands, and requires researchers to obtain a permit prior to excavating or removing any archaeological materials on federal lands. The Act further requires that the nature and location of archaeological resources be kept confidential unless providing the information would further the purposes of the statute and not create a risk of harm to such resources.

Native American Graves Protection and Repatriation Act of 1990

Requirements for responding to discoveries of Native American human remains and associated funerary objects on federal land are addressed under the Native American Graves Protection and Repatriation Act of 1990 (NAGPRA) (25 USC 3001–3013) and its implementing regulations (43 CFR Part 10). If human

remains, funerary objects, sacred objects, or objects of cultural patrimony are discovered on federal or tribal lands, the federal agency must determine and consult with the lineal descendants and culturally affiliated Indian tribes, and carry out appropriate treatment and disposition of the discovered remains, including transfer of custody. An *Indian tribe* is defined as any tribe, band, nation, or other organized group or community of Indians that is recognized as eligible for the special programs and services provided by the U.S. to Indians because of their status as Indians. NAGPRA does not require federal agencies to consult with non-federally recognized tribes. However, there are some cases in which non-federally recognized tribes may be appropriate claimants for cultural items. Federal agencies that wish to return Native American human remains and cultural items to non-federally recognized tribes may do so after review and approval by the NAGPRA Review Committee.

NAGPRA also requires permitting of the intentional removal from, or excavation of, Native American cultural items from federal or tribal lands for purposes of discovery, study, or removal; establishes criminal penalties for trafficking in human remains or cultural objects; and requires agencies and museums that receive federal funding to inventory those items in their possession, identify the descendants of and repatriate those items.

Secretary of the Interior's Standards

The Secretary of the Interior's Standards (36 Code of Federal Regulations [CFR] Part 68) were originally designed for use by the National Park Service and intended for application in a federal context. The stated intent of the Standards is to "set forth standards for the treatment of historic properties containing standards for preservation, rehabilitation, restoration, and reconstruction" (36 CFR 68.1). One set of standards – preservation, rehabilitation, restoration or reconstruction – will apply to a property undergoing treatment, depending upon the property's significance, existing physical condition, the extent of documentation available and interpretive goals, when applicable, and are to be applied in a reasonable manner, taking into consideration economic and technical feasibility (36 CFR 68.3). The Standards for Rehabilitation (as defined under 36 CFR 68.3(b)) are most applicable to projects where compatibility with historic building alterations or alterations to a building's environment is being evaluated and can pertain to historic buildings of all materials, construction types, sizes, and occupancy and encompass the exterior and the interior, related landscape features and the building's site and environment as well as attached, adjacent, or related new construction.

The Standards were subsequently incorporated into Public Resources Code (PRC) Section 15164.5(b) as a gauge against which lead agencies complying with the California Environmental Quality Act (CEQA) could measure project impacts to historical resources. As stated under the prior CEQA subsection, generally a project that complies with the Standards is considered to have mitigated its impacts to historical resources to a less-than-significant level (CEQA Guidelines Section 15064.5(b)(3); see also *League for Protection of Oakland's Architectural and Historic Resources v. City of Oakland* (1997) 52 Cal.App.4th 896. Although not prescriptive and as suggested by the term "generally" as used in the PRC, the appropriate application of the Standards, or a subset thereof, requires careful consideration by a lead agency of the specific significance, characteristics, and condition of the historical resource for which impacts are being evaluated.

State

California Environmental Quality Act

CEQA is the principal statute governing environmental review of projects occurring in the state and is codified at PRC Section 21000 et seq. CEQA requires lead agencies to determine if a proposed project would have a significant effect on the environment, including significant effects on historical or unique archaeological resources. Under CEQA Section 21084.1, a project that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment.

CEQA Guidelines Section 15064.5 recognizes that historical resources include: (1) resources listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources; (2) resources included in a local register of historical resources, as defined in PRC Section 5020.1(k) or identified as significant in a historical resource survey meeting the requirements of PRC Section 5024.1(g); and (3) any objects, buildings, structures, sites, areas, places, records, or manuscripts which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California by the lead agency, provided the lead agency's determination is supported by substantial evidence in light of the whole record.

If a lead agency determines that an archaeological site is a historical resource, the provisions of PRC Section 21084.1 and CEQA Guidelines Section 15064.5 apply. If an archaeological site does not meet the criteria for a historical resource contained in the CEQA Guidelines, then the site may be treated in accordance with the provisions of PRC Section 21083, if it meets the criteria of a unique archaeological resource. As defined in PRC Section 21083.2(g), a unique archaeological resource is an archaeological artifact, object, or site, about which it can be clearly demonstrated that without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- Contains information needed to answer important scientific research questions and there is a demonstrable public interest in that information;
- Has a special and particular quality such as being the oldest of its type or the best available example of its type; or
- Is directly associated with a scientifically recognized important precontact or historic event or person.

If an archaeological site meets the criteria for a unique archaeological resource as defined in PRC Section 21083.2(g), then the site is to be treated in accordance with the provisions of PRC Section 21083.2, which states that if the lead agency determines that a project would have a significant effect on unique archaeological resources, the lead agency may require reasonable efforts be made to permit any or all of these resources to be preserved in place.[2] If preservation in place is not feasible, mitigation measures shall be required. The CEQA Guidelines note that if an archaeological resource is neither a unique

[2] California Public Resources Code Section 21083.1(a), http://leginfo.legislature.ca.gov/faces/codes_displaySection.xhtml?lawCode=PRC&sectionNum=21083.2. Accessed February 9, 2021.

archaeological nor a historical resource, the effects of the project on those resources shall not be considered a significant effect on the environment.[3]

A significant effect under CEQA would occur if a project results in a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines Section 15064.5(a). Substantial adverse change is defined as "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired".[4] According to CEQA Guidelines Section 15064.5(b)(2), the significance of a historical resource is materially impaired when a project demolishes or materially alters in an adverse manner those physical characteristics that:

A. Convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register; or

B. Account for its inclusion in a local register of historical resources pursuant to PRC Section 5020.1(k) or its identification in a historical resources survey meeting the requirements of PRC Section 5024.1(g) Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or

C. Convey its historical significance and that justify its eligibility for inclusion in the California Register as determined by a Lead Agency for purposes of CEQA.

In general, a project that complies with the *Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings* is considered to have impacts that are less than significant.[5]

California Register of Historical Resources

The California Register is "an authoritative listing and guide to be used by State and local agencies, private groups, and citizens in identifying the existing historical resources of the State and to indicate which resources deserve to be protected, to the extent prudent and feasible, from substantial adverse change."[6] The California Register was enacted in 1992, and its regulations became official on January 1, 1998. The California Register is administered by the California Office of Historic Preservation (OHP). The criteria for eligibility for the California Register are based upon National Register of Historic Places (National Register) criteria.[7] Certain resources are determined to be automatically included in the California Register, including California properties formally determined eligible for, or listed in, the

7 California Public Resources Code, Section 5024.1[b] http://leginfo.legislature.ca.gov/faces/codes_displaySection.xhtml?lawCode=PRC&sectionNum=5024.1. Accessed February 9, 2021.

National Register. To be eligible for the California Register, a precontact or historic-period property must be significant at the local, State, and/or federal level under one or more of the following four criteria:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. Is associated with the lives of persons important in our past;
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
4. Has yielded, or may be likely to yield, information important in prehistory or history.

A resource eligible for the California Register must meet one of the criteria of significance described above, and retain enough of its historic character or appearance (integrity) to be recognizable as a historical resource and to convey the reason for its significance. It is possible that a historic resource may not retain sufficient integrity to meet the criteria for listing in the National Register, but it may still be eligible for listing in the California Register.

Additionally, the California Register consists of resources that are listed automatically and those that must be nominated through an application and public hearing process. The California Register automatically includes the following:

- California properties listed on the National Register and those formally determined eligible for the National Register;
- California Registered Historical Landmarks from No. 770 onward; and,
- Those California Points of Historical Interest that have been evaluated by the State Office of Historic Preservation (OHP) and have been recommended to the State Historical Resources Commission for inclusion on the California Register.

Other resources that may be nominated to the California Register include:

- Historical resources with a significance rating of Category 3 through 5 (those properties identified as eligible for listing in the National Register, the California Register, and/or a local jurisdiction register);
- Individual historical resources;
- Historic districts; and,
- Historical resources designated or listed as local landmarks, or designated under any local ordinance, such as an historic preservation overlay zone (PRC Section 5024.1(d)-(e).)

California Health and Safety Code

HSC Sections 7050.5, 7051, and 7054 address the illegality of interference with human burial remains (except as allowed under applicable PRC Sections), and the disposition of Native American burials in archaeological sites. These regulations protect such remains from disturbance, vandalism, or inadvertent destruction, and establish procedures to be implemented if Native American skeletal remains are discovered during construction of a project, including treatment of the remains prior to, during, and after evaluation, and reburial procedures.

California Public Resources Code (PRC)

PRC Section 5097.98 provides procedures in the event human remains of Native American origin are discovered during project implementation. PRC Section 5097.98 requires that no further disturbances occur in the immediate vicinity of the discovery, that the discovery is adequately protected according to generally accepted cultural and archaeological standards, and that further activities take into account the possibility of multiple burials. PRC Section 5097.98 further requires the Native American Heritage Commission (NAHC), upon notification by a County Coroner, designate and notify a Most Likely Descendant (MLD) regarding the discovery of Native American human remains. Once the MLD has been granted access to the site by the landowner and inspected the discovery, the MLD then has 48 hours to provide recommendations to the landowner for the treatment of the human remains and any associated grave goods. In the event that no descendant is identified, or the descendant fails to make a recommendation for disposition, or if the landowner rejects the recommendation of the descendant, the landowner may, with appropriate dignity, reinter the remains and burial items on the property in a location that will not be subject to further disturbance.

California Government Code Sections 7927.000 and 7927.005

These sections of the California Public Records Act were enacted to protect archaeological sites from unauthorized excavation, looting, or vandalism. Section 7927.000 explicitly authorizes public agencies to withhold information from the public relating to "Native American graves, cemeteries, and sacred places." Section 7927.005 specifically exempts from disclosure requests for "records that relate to archaeological site information and reports maintained by, or in the possession of, the Department of Parks and Recreation, the State Historical Resources Commission, the State Lands Commission, the Native American Heritage Commission, another state agency, or a local agency, including the records that the agency obtains through a consultation process between a California Native American tribe and a state or local agency."

Local

City of Culver City General Plan

The City's General Plan 2045 has one goal (Goal C-1) for cultural resources (including archaeological resources and historic architectural resources), which indicates that "cultural resources are protected and enhanced through proactive measures" (City of Culver City, 2024:248). Measures C-1.1 through C-1.22 provided below are focused on the protection of archaeological and historic architectural resources.

C-1.1: Cultural resource catalog. Maintain a catalog of cultural resources within the city.

C-1.2: Cultural and historic resource inventory. Continue to inventory at regular intervals cultural and historical resources, including buildings, structures, districts, objects, and sites.

C-1.3: Historic resources in databases. Continue to work with Building and Planning Divisions and with the County Recorder's Office to ensure all historical resources are flagged in relevant databases.

C-1.4: Historic materials cataloging. Encourage that historic materials are cataloged and available for public access.

C-1.5: Building plaques. Continue to work with the Cultural Affairs Division to ensure plaques are positioned on newly-designated cultural resources.

C-1.6: Historic sign ordinance. Continue implementation of the historic sign ordinance.

C-1.7: Cultural resource funding. Identify and acquire funding to preserve cultural resources.

C-1.8: Incentives for developers. Promote the use of incentives for developers to maintain, restore, rebuild, or rehabilitate historic structures within commercial and residential areas.

C-1.9: Cultural resource preservation. Preserve the city's cultural resources.

C-1.10: Maintain and preserve historic structures and artifacts. Encourage maintenance and preservation of historic structures and artifacts and

C-1.11: Preservation in the planning and development review process. Coordinate with the Cultural Affairs Division to integrate preservation into the planning and development review process to ensure that cultural heritage concerns are identified at an early stage and addressed, as warranted, throughout the process. Encourage ordinances and policies that contribute to preservation goals and amend codes, where necessary, to reflect preservation goals.

C-1.12: Historic standards and building codes. Apply the Secretary of the Interior's Standards and/or the alternative building codes, such as the Uniform Code for Building Conservation (UCBC) and/or the State Historic Building Code, to qualified historic properties.

C-1.13: Demolition of historic structures. Expand existing laws and regulations as necessary to prevent demolition of historically significant structures by neglect.

C-1.14: Historic property protection in natural disasters. Comply with California Public Resources Code Section 5028 (Natural Disaster Damage to Historic Property).

C-1.15: Public knowledge promotion. Promote public knowledge and understanding of cultural resources (including archaeological, tribal cultural resources, historic resources, and paleontological resources) present within the city.

C-1.16: Tribal consultation. Continue to consult with Native American groups in accordance with Senate Bill 18 and Assembly Bill 52 to identify Tribal Cultural Resources.

C-1.17: Educational institution cooperation. Cooperate with the educational institutions and other interested parties to build awareness of the legacy of the city's past and the necessity of its retention.

C-1.18: Historical Preservation Program awareness. Continue to expand information on the Historic Preservation Program available via the City's website.

C-1.19: Historic resource information for property owners. Provide technical information that will help property owners in planning new additions that are complementary to the existing historic structures and conform with the Secretary of the Interior's Standards.

C-1.20: Document and resource sharing. Solicit residents to share or donate historic documents relating to Culver City to the historical society archives or other appropriate institutional oral history program.

C-1.21: Protect Archaeological, Paleontological, and Tribal Cultural Resources. Promote programs and policies to protect known archaeological and paleontological sites and Tribal Cultural Resources.

C-1.22: Preserve government agency historic properties. Encourage government agencies to maintain historic properties they own in the city.

The City's General Plan also includes the following implementation actions for the preservation of archaeological and historic architectural resources.

IA.C-1: Historic landscape and feature identification. Identify and promote preservation of older historic landscapes and natural features that help to define the neighborhoods or maintain the context of historic districts and landmarks.

IA.C-2: Citywide cultural resources survey. Update a citywide cultural resources survey every five to ten years.

IA.C-3: Citywide context statement. Develop a citywide context statement that summarizes the city's prehistory, history, and architecture, organized by themes and periods that provides registration standards and integrity thresholds considered necessary to qualify for listing the resource on the City's cultural resources register.

IA.C-4: Resources for historic structures. Promote public awareness of available tax credits and incentives that assist in maintaining and rehabilitating historic structures and resources.

IA.C-5: Certified Local Government. Become a Certified Local Government (CLG) to qualify for State preservation grants.

IA.C-6: Preservation incentive program. Establish preservation incentive programs, like the Mills Act Tax Credit, and encourage property owners to apply.

IA.C-7: Financing mechanisms for historic preservation. Investigate other financing mechanisms to promote historic preservation, such as Community Development Block Grants, Impact fees, Revolving Funds, and Facade Easements.

IA.C-8: Historic discretionary review. Require that projects subject to discretionary review are screened to Cultural Affairs to determine if further evaluation by cultural affairs is warranted and, if so, require that projects undergo historic, archaeological, and paleontological assessments and are documented in technical studies by qualified experts to identify the potential for resources to be negatively affected during project implementation and to ensure steps are taken, where warranted, to protect resources.

IA.C-9: Historic preservation ordinance revisions. Revise the City's historic preservation ordinance to be consistent with current State and federal preservation standards.

IA.C-10: Standard conditions of development approval. Continue to implement standard conditions of approval that require and specify the steps to be taken to avoid damage and promote preservation if unknown archaeological or paleontological resources, or Tribal Cultural Resource are uncovered during construction.

Cultural Setting

Precontact Setting

The chronology of Southern California is typically divided into three general time periods: the Early Holocene (9,600 cal[8] B.C. to 5,600 cal B.C.), the Middle Holocene (5,600 cal B.C. to 1,650 cal B.C.), and the Late Holocene (1,650 cal B.C. to cal A.D. 1769). This chronology is manifested in the archaeological record by particular artifacts and burial practices that indicate specific technologies, economic systems, trade networks, and other aspects of culture.

While it is not certain when humans first came to California, their presence in Southern California by about 9,600 cal B.C. has been well documented. At Daisy Cave, on San Miguel Island, cultural remains have been radiocarbon dated to between 9,150 and 9,000 cal B.C. (Byrd and Raab 2007). During the Early Holocene (9,600 cal B.C. to 5,600 cal B.C.), the climate of Southern California became warmer and more arid and the human populations, who were represented by small hunter gathers until this point and resided mainly in coastal or inland desert areas, began exploiting a wider range of plant and animal resources (Byrd and Raab 2007).

During the Late Holocene (1,650 cal B.C. to cal A.D. 1769), many aspects of Millingstone culture persisted, but a number of socioeconomic changes occurred (Erlandson 1994; Wallace 1955; Warren 1968). The native populations of Southern California were becoming less mobile and populations began to gather in small sedentary villages with satellite resource-gathering camps. Increasing population size necessitated the intensified use of existing terrestrial and marine resources (Erlandson 1994). Evidence

8 The word 'cal' is used to signify a calibrated date.

indicates that the overexploitation of larger, high-ranked food resources may have led to a shift in subsistence, towards a focus on acquiring greater amounts of smaller resources, such as shellfish and small-seeded plants (Byrd and Raab 2007). Between about A.D. 800 and A.D. 1350, there was an episode of sustained drought, known as the Medieval Climatic Anomaly (MCA) (Jones et al. 1999). While this climatic event did not appear to reduce the human population, it did lead to a change in subsistence strategies in order to deal with the substantial stress on resources.

Given the increasing sedentism and growing populations during the Late Holocene, territorial conscription and competition became acute. Primary settlements or village sites were typically established in areas with available freshwater, and where two or more ecological zones intersected (McCawley 1996). This strategic placement of living space provided a degree of security in that when subsistence resources associated with one ecological zone failed, the resources of another could be exploited (McCawley 1996). Villages typically claimed and carefully defended fixed territories that may have averaged 30-square miles in size encompassing a variety of ecological zones that could be exploited for subsistence resources (McCawley 1996).

The Late Holocene marks a period in which specialization in labor emerged, trading networks became an increasingly important means by which both utilitarian and non-utilitarian materials were acquired, and travel routes were extended. Trade during this period reached its zenith as asphaltum (tar), seashells, and steatite were traded from Catalina Island (*Pimu* or *Pimugna)* and coastal Southern California to the Great Basin. Major technological changes appeared as well, particularly with the advent of the bow and arrow sometime after cal A.D. 500, which largely replaced the use of the dart and atlatl (Byrd and Raab 2007).

Ethnographic Setting

The Project Site is located in a region traditionally occupied by the Gabrielino. The term “Gabrielino” is a general term that refers to those Native Americans who were administered by the Spanish at the Mission San Gabriel Arcángel. Prior to European colonization, the Gabrielino occupied a diverse area that included: the watersheds of the Los Angeles, San Gabriel, and Santa Ana rivers; the Los Angeles basin; and the islands of San Clemente, San Nicolas, and Santa Catalina (Kroeber 1925). Their neighbors included the Chumash and Tataviam to the north, the Juañeno to the south, and the Serrano and Cahuilla to the east. The Gabrielino language was part of the Takic branch of the Uto-Aztecan language family.

The Gabrielino Indians were hunter-gatherers and lived in permanent communities located near the presence of a stable food supply. Subsistence consisted of hunting, fishing, and gathering. Small terrestrial game was hunted with deadfalls, rabbit drives, and by burning undergrowth, while larger game such as deer were hunted using bows and arrows. Fish were taken by hook and line, nets, traps, spears, and poison (Bean and Smith 1978). The primary plant resources were the acorn, gathered in the fall and processed in mortars and pestles, and various seeds that were harvested in late spring and summer and ground with manos and metates. The seeds included chia and other sages, various grasses, and islay or holly-leafed cherry. Community populations generally ranged from 50 to 100 inhabitants, although larger settlements may have existed. The Gabrielino are estimated to have had a population numbering around 5,000 in the pre-contact period (Kroeber 1925).

The Late Precontact period, spanning from approximately 1,500 years B.P. to the mission era, is the period associated with the florescence of the Gabrielino (Wallace 1955). Coming ashore near Malibu

Lagoon or Mugu Lagoon in October of 1542, Juan Rodriguez Cabrillo was the first European to make contact with the Gabrielino Indians. The Gabrielino are reported to have been second only to their Chumash neighbors in terms of population size, regional influence, and degree of sedentism (Bean and Smith 1978).

Maps produced by early explorers indicate that at least 26 Gabrielino villages were within proximity to known Los Angeles River courses, while an additional 18 villages were reasonably close to the river (Gumprecht 2001). The closest named settlements to the Project Site are *Saa'anga* and *Waachnga.* Review of a map titled *Gabrielino Communities Located on the Los Angeles-Santa Ana Plain* by William McCawley (1996) indicates that the settlement of *Saa'anga* was located approximately 1 mile north of the Project Site, while the settlement of *Waachnga* was situated approximately 1-mile south. Both of these settlements are depicted as located close to Ballona Creek.

Historic Setting

History and Early Development of Culver City

Harry H. Culver (1880 -1946), the founder of Culver City, was born in Milford, Nebraska on January 22, 1880. The middle child of five, Culver was raised on a farm along with three brothers and a sister. His father, Jacob Hazel Culver, was a brigadier general in the National Guard and a strict disciplinarian. Culver followed in his father's footsteps, enlisting in the military during the Spanish-American War. He studied at Doane College before spending three years at the University of Nebraska. In 1901, Culver traveled to the Philippines where he began working in the mercantile business, worked as a reporter for the Manila Times, and served as a special agent for the customs department. After more than three years in the Philippines, Culver returned to the United States, performing his customs duties in Detroit and Saint Louis. He resigned from the customs department in 1910 when he moved to California and began working for real estate giant I.N. Van Nuys. "As the story goes, after Van Nuys offered to make him a manager because of his exemplary work, Culver decided to venture out on his own. After intense study, Harry Culver pinpointed the area between Los Angeles and Abbot Kinney's resort of Venice for his city" (Cerra 2013).

At the California Club in 1913, Harry Culver announced his plans to develop a city west of downtown Los Angeles. Culver saw an opportunity to capitalize on the excitement generated by Abbot Kinney's Venice of America development along the California coast south of Santa Monica. Between Venice and Los Angeles sat open land, originally part of Rancho La Ballona, and as the relationship between Los Angeles and Venice took shape, Culver saw a spot in between that was ideal for a new town site. "If you draw a line from the Story Building to the Ocean Front at Venice, at the halfway mark you will find three intersection electric lines—the logical center for what we propose to develop a town-site." Soon after Culver's speech, the city of Culver City was established. Culver promoted his new community by holding special events like "prettiest baby contests" and an annual marathon race. Newspaper advertisements exclaimed "All Roads Lead to Culver City!".

Culver City continued to grow and finally incorporated in 1917 (Cerra 2013). The city grew outward from the downtown commercial area and adjacent film studios. This area saw commercial development along Culver Boulevard in the 1920s and 1930s, and spread to Washington Boulevard in the 1940s and 1950s, and was surrounded by residential neighborhoods. Downtown Culver City was centered on a main street (Washington Boulevard) anchored by a six-story hotel, Fire and Police Departments, a city hall, banks,

restaurants, and stores. The early economics of Culver City were supported by movie studios. Industry came in the form of Western Stove in 1922, then the Helms Bakeries in 1930, and then the Hayden Industrial Tract was established in the 1940s. During the 1950s Washington Boulevard would be improved with a number of car dealerships. Over the years, more than forty annexations increased the size of the city from 1.2 square miles to about five square miles (Cerra 2004).

At the heart of Screenland, the economic health of the city has always been strongly tied to the movie industry. Following the closure of MGM Studios, the city was looking for ways to spur economic development. To spur development and create a new flow of money, the city created the Redevelopment Agency. One of the first projects undertaken by the newly formed agency was the Fox Hills redevelopment. This development would open up more than 300 acres of land just southwest of the city to residential, commercial, and industrial growth (Culver City Historical Society, n.d).

Archival Research

SCCIC Records Search

A records search for the Project Site was conducted on January 17, 2024, at the CHRIS-SCCIC housed at California State University, Fullerton. The records search included a review of all recorded cultural resources and previous studies within the Project Site and a 0.50-mile radius.

Previous Cultural Resources Investigations

The records search results indicate that 16 cultural resources studies have been conducted within a 0.50-mile radius of the Project Site. Approximately 15 percent of the 0.50-mile records search radius has been included in previous cultural resources assessments. Of the 16 previous studies, none overlap the Project Site.

Previously Recorded Cultural Resources

The records search results indicate that no cultural resources have been recorded within the Project Site. However, two precontact archaeological resources (CA-LAN-67 and -216) have been recorded within the 0.50-mile radius (**Table 1**). Additionally, four precontact archaeological resources (CA-LAN-59, -60, -213, -2768) have been recorded in the immediate vicinity, albeit outside, of the 0.50-mile radius.

TABLE 1
PREVIOUSLY RECORDED CULTURAL RESOURCES

P-Number (P-19-)	Permanent Trinomial (CA-LAN-)	Other Designation	Description	Recording Events
59	59	Malcom Farmer's Playa del Rey Site No. 1	Precontact archaeological site: village or camp site, including artifacts (steatite bowl, quartz crystal point, "arrowpoints", mortar and steatite fragments, manos, pestles, shell, hammerstones, scrapers, etc. Site reportedly destroyed.	1950

P-Number (P-19-)	Permanent Trinomial (CA-LAN-)	Other Designation	Description	Recording Events
60	60	Malcom Farmer's Playa del Rey Site No. 1	Precontact archaeological site: shell midden, "chips", mortar fragments, hammerstones, "chopper", and steatite pieces. Human remains (cranium pieces) and pieces of burned deer bone. Site reportedly destroyed.	1950
67	67	Malcom Farmer's Baldwin Hills Site No. 1	Precontact archaeological site: described as a possible temporary dwelling on a small wash. Small amount of shell reported.	1950
213	213	LA-31	Precontact archaeological site: metates	1953
216	216	LA-34	Precontact archaeological site: mortars	1953
2768	2768	SR 20	Precontact archaeological site: subsurface midden deposits	2000

Other Research

Additional archaeological resources (the report for which has not yet been archived at the CHRIS-SCCIC, as it is still in progress) were identified several miles northwest from the Project Site during ground disturbing activities in connection with a development project in Downtown Culver City (ESA 2022). These include two isolated precontact metates that were recovered in the upper six feet of disturbed fill sediments in an area of the property that had been previously developed with a large warehouse building.

Sacred Lands File Search

The NAHC maintains a confidential SLF which contains sites of traditional, cultural, or religious value to the Native American community. The NAHC was contacted on December 4, 2024, to request a search of the SLF. The NAHC responded to the request in a letter dated January 16, 2025, indicating that the results were negative. However, the NAHC noted that the absence of site information does not mean the absence of cultural resources in a project area (**Appendix B**).

Land Use History of the Project Site

Historic maps and aerial photographs were examined to provide historical information about land uses of the Project Site and to contribute to an assessment of the Project Site's archaeological sensitivity. Available topographic maps include the 1896 Redondo 15-minute quadrangle, the 1924 and 1930 Inglewood 7.5-minute quadrangles, the 1944 Redondo 15-minute quadrangle, the 1948 and 1950 Inglewood 7.5-minute quadrangle (TopoView, 2025). Aerial photographs include those from the following years: 1952, 1963, 1972, and 1980 (historicaerials.com, 2025).

The 1896 historic map shows that the Project Site was undeveloped and that Centinela Creek was located approximately 0.50 miles south of the Project Site, Ballona Creek approximately 1.65 miles to the west, and an unnamed drainage approximately 1.25 miles to the east (**Figure 4**). The 1924 historic map continues showing the Project Site as undeveloped. The 1930 and 1944 historic maps show that the

Project Site was located within the Fox Hills Country Club. By 1948, the country club is renamed as Fox Hills and Baldwin Hills Golf Course. No changes to the Project Site are observed in the 1950 historic map. The 1952 and 1963 historic aerial photographs show sand traps and putting greens from the golf course at the Project Site. By 1972, housing development is observed immediately adjacent to the Project Site. By 1980, the Project Site is developed with the existing uses.

Overview of Project Site (in red) on the 1896 topographic map.

Geologic Map Review

Review of the Dibblee and Minch (2007) geologic map of the Venice and Inglewood quadrangles indicates that the Project Site is underlain by older alluvium (**Qoa**) along the northwest portion and Paleosol in Baldwin Hills (**Qop**) in the northeastern, central, and southern portions of the Project Site. **Qoa** is described as "Older alluvium of gray to light brown pebble-gravel, sand, and silt-clay, elevated and dissected; in Baldwin Hills designated as Baldwin Hills sandy gravel by Weber et al., 1982." (Dibblee and Minch, 2007). **Qop** overlies the **Qoa** and is described as "Paleosol in Baldwin Hills… [and consisting of a] "gray to rusty brown, sandy, locally pebbly, moderately indurated 'hard pan' on **Qoa**" (Dibblee and Minch, 2007).

Bandy and Marinkovich (1973) documented marine deposits in the Baldwin Hills dated at 36,200 ±2,750 radiocarbon years and 28,450 ±2,600 radiocarbon years. Thus, uplift of the Baldwin Hills postdates those dates and it is probable that the **Qoa** and **Qop** units postdate the 28,000-year date.

Review of Geotechnical Report

ESA reviewed the geotechnical report prepared for the Project by Geotechnologies, Inc. (2024). Review of the geotechnical report indicates that a total of seven borings were drilled at the Project Site to depths ranging between 40 and 80 feet bgs. Fill soils were encountered in all borings starting from surface and ranging in depth between 2 and 5 feet bgs. Native soils were found beneath the fill soils. The native soils are characterized as the following:

> *…interlayered granular (sandy) soil layers, and fine soil layers. The granular soil layers are composed of sand, silty sand and clayey sand, while the fine layers are composed of sandy to silty clay and sandy to clayey silt. The observed native soils are slightly moist to moist, range from yellowish brown to orange brown to dark brown to gray in color, and are medium dense to very dense, stiff to very stiff, and fine to coarse grained, with occasional gravel"* (Geotechnologies, Inc., 2024:4).

Pedestrian Survey

A cultural resources pedestrian survey of the Project Site was conducted on February 12, 2025, by ESA Cultural Resources Specialist Vincent Gentile, B.A. The survey aimed at identifying archaeological resources within the Project Site. Approximately 10 percent of the Project Site was subject to an systematic survey, which targeted sections of land with exposed ground surface (e.g., green belts and landscape areas). The transect intervals were spaced at no more than 15 meters between each transect. The remaining 90 percent of the Project Site was not surveyed, as it is paved and developed with buildings, parking lots, walkways, and exhibits no ground surface visibility. The areas surveyed exhibited less than 5 percent ground surface visibility as they were covered with grass/sod or other ornamental vegetation. No archaeological resources were observed during the survey. **Figures 5-7** depict the existing conditions of the Project Site at the time of the pedestrian survey.

Subsurface Sensitivity Assessment

Precontact Archaeological Analysis

Results of the SCCIC records search have indicated that two precontact archaeological resources have been recorded within the 0.50-mile radius of the Project Site and four additional precontact archaeological resources have been recorded in the immediate vicinity, albeit outside, of the 0.50-mile radius. Additionally, two Native American villages (*Saa'anga* and *Waachnga*) were formerly situated in the general vicinity of the Project Site. These findings confirm that precontact inhabitants have occupied areas in the vicinity of the Project Site. Moreover, review of historic maps indicate that Centinela Creek, Ballona Creek, and an unnamed drainage are located in the general vicinity between 0.85 and 1.65 miles from the Project Site, which would have attracted precontact inhabitants to the area since they would have provided them with fresh water, along with floral and faunal resources. Review of the Dibblee and Minch (2007) geologic map of the Venice and Inglewood quadrangles indicates that the Project Site is underlain by older alluvium (**Qoa**) and Paleosol soils (**Qop**) and it is likely that both units are younger than 28,000 years in age, with the Paleosol (**Qop**) being of an even younger age since it overlies the older alluvium (**Qoa**). Review of the geotechnical report indicates that fill materials were encountered starting from the surface and ranging in depth between 2 and 5 feet bgs. Native materials (of unknown age) were reportedly found beneath the fill materials that likely represent both Qoa or Qop. The older alluvium (**Qoa**) that is mapped at the surface in several portions of the Project Site is likely too old to be conducive to retaining precontact archaeological resources. However, the Paleosol soils (**Qop**) that are also mapped at the surface in other areas of the Project

Site (and also overlies the Qoa) currently have an unknown age and could date to the Late Pleistocene or Early Holocene. In addition, precontact archaeological resources can become intermixed within fill materials such as in the case with the two precontact metate artifacts that were encountered during monitoring in connection with a development project in Downtown Culver City located several miles from the Project Site. Given these findings stated above and since the Project would include excavations that would reach depths of 25 feet bgs, the potential to encounter buried precontact archaeological resources within the Project Site is considered moderate to high.

Historical Archaeological Analysis

Review of historic maps and aerial photographs indicate that the Project Site was undeveloped until a golf course was constructed in the Project Site by at least 1930. The existing building was also developed by at least 1980. Based on the lack of previous historic uses within the Project Site and the fact that no historic-period archaeological resources have been previously recorded within the Project Site or 0.50-mile radius, the potential to encounter historic-period archaeological resources within the Project Site is considered low.

Summary of Results and Recommended Mitigation Measures

The results of the assessment indicate that no known archaeological resources have been identified within the Project Site. However, the archaeological sensitivity assessment has indicated that the potential for encountering buried precontact archaeological resources during construction is moderate to high, while the potential for encountering historic-period archaeological resources is low. Therefore, impacts to previously unknown buried archaeological resources would be potentially significant, and the following mitigation measures are provided in order to reduce impacts to archaeological resources to a less-than-significant level under CEQA.

- Prior to the issuance of a demolition permit, the Applicant shall retain an archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards for Archaeology (Qualified Archaeologist) to oversee an archaeological monitor who shall be present during initial Project construction work such as site demolition (e.g., building footings/foundations, subsurface utilities, surface parking lots, sidewalks, etc.), clearing/grubbing, grading, trenching, or related moving of soils within the Project Site (collectively, ground disturbing activities); provided, however, that ground disturbing activities shall not include any moving of soils after they have been initially disturbed or displaced by Project-related construction. The Qualified Archaeologist shall determine the frequency of monitoring based on the rate of excavation and grading activities, proximity to known archaeological resources, the materials being excavated, and the depth of excavation, and if found, the abundance and type of archaeological resources encountered. The frequency of monitoring can be reduced to part-time inspections or ceased entirely if determined appropriate by the Qualified Archaeologist.
- Prior to commencement of excavation activities, an Archaeological and Cultural Resources Sensitivity Training shall be given for construction personnel. The training session shall be carried out by the Qualified Archaeologist and shall focus on how to identify archaeological resources that may be encountered during earthmoving activities and the procedures to be followed in such an event.
- In the event that historic or precontact archaeological resources (e.g., bottles, foundations, refuse dumps, etc.) are unearthed, ground-disturbing activities shall be halted or diverted away from the

vicinity of the find so that the find can be evaluated. After consulting with the Applicant, the Qualified Archeologist shall establish an appropriate buffer in accordance with industry standards, reasonable assumptions regarding the potential for additional discoveries in the vicinity, and safety considerations for those making an evaluation and potential recovery of the discovery. This buffer area shall be established around the find where construction activities shall not be allowed to continue. Work within the buffer area shall only be allowed to continue after the evaluation and recovery efforts are completed. Work shall be allowed to continue outside of the buffer area.

All archaeological resources unearthed by Project construction activities shall be evaluated by the Qualified Archaeologist. If the Qualified Archaeologist determines the find to constitute a "historical resource" pursuant to CEQA Guidelines Section 15064.5(a) or a "unique archaeological resource" pursuant to Public Resources Code Section 21083.2(g), the Qualified Archaeologist shall coordinate with the Applicant and the City of Culver City (City) to develop a formal treatment plan that would serve to reduce impacts to the resources and that provides for or the adequate recovery of the scientifically consequential information contained in the resources along with subsequent laboratory processing, analysis, evaluation, and reporting. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and Public Resources Code Sections 21083.2(b) for unique archaeological resources. The treatment plan shall also include measures regarding the curation of the recovered resources that may include curation at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the resources, they may be donated to a local school or historical society in the area (such as the Culver City Historical Society) for educational purposes.

- The Qualified Archaeologist shall prepare a final report and appropriate California Department of Parks and Recreation Site Forms at the conclusion of archaeological monitoring. The report shall include a description of resources unearthed, if any, treatment of the resources, results of the artifact processing, analysis, and research, and evaluation of the resources with respect to the California Register of Historical Resources and CEQA. The report and the Site Forms shall be submitted by the Applicant to the City, the South Central Coastal Information Center, and representatives of other appropriate or concerned agencies to signify the satisfactory completion of the Project and required mitigation measures.

Society for American Archaeology

Society for California Archaeology

Pacific Coast Archaeological Society

Kyle Garcia has over 21 years of experience in the archaeology and prehistory of southern California, and meets and exceeds the Secretary of Interior Standards qualificaitons for a prehistoric and historic archaeolgoist. During his career, he has authored or contributed to more than 800 projects subject to the requirements of the California Environmental Quality Act, the National Environmental Policy Act (NEPA), and regulations implementing Section 106 of the National Historic Preservation Act (Section 106 of the NHPA). He is well-versed in the archaeological resources of California's coastal, interior, and island settings. He is skilled in evaluation historic and prehistoric archaeological resources; agency and Native American consultation; pedestrian surveys, testing and evaluation excavations as well as archaeological and paleontological construction monitoring, and laboratory processing. During his tenure, he has authored or contributed to more than 400 technical reports and sections to support all levels of CEQA and NEPA documents. Kyle's portfolio of projects includes energy, water, and transportation infrastructure as well as residential, commercial, mixed-use, institutional, and urban redevelopment serving public and private sector clients. Kyle has conducted archaeological work throughout California and is a certified archaeologist and paleontologist in Riverside, Santa Barbara, and Orange counties.

Relevant Experience

Archaeological/Paleontological Monitoring. Kyle has managed more than 120 archaeological and/or paleontological construction monitoring projects in Los Angeles, Orange, Riverside, San Bernardino, and Ventura counties. He has a commanding knowledge of the procedures to implement in the event of an inadvertent discovery during construction, and how to navigate an applicant or lead agency though that process to ensure compliance with the project's mitigation measures or conditions of approval and to reach consensus on treatment of the discovery, especially if the discovery is Native American in origin.

Paleontology. In addition to his archaeological work, Kyle has been cross-trained in paleontological mitigation monitoring and assisted in the excavations of a Miocene whale fossil near Irvine and a new species of extinct tuna in Laguna Niguel, California. Kyle has also managed or conducted more than 200 paleontological assessments and 40 paleontological monitoring projects throughout southern California. He has assisted ESA's paleontologists with the preparation of paleontological reports in compliance with CEQA and local paleontological guidelines, including guidelines for the Society for Vertebrate Paleontology.

Project Experience

Archaeological and Paleontological Monitoring for the LAX Crossfield Taxiway Improvements, Los Angeles, CA. *Project Manager/Archaeological Monitor.* Between 2009-2010, Kyle performed archaeological and paleontological monitoring services during

earthmoving operations associated with the development of the Crossfield Taxiway project in accordance with established mitigation measures from the LAX Crossfield Taxiway Project (CFTP) EIR. PCR conducted archaeological and paleontological field visits, paleontological sediment sampling, and monitoring of earthmoving operations associated with the construction of CFTP until activities requiring monitoring ended. These operations included excavations for filter boxes, water pipeline installation, and the realignment of World Way West. In addition to monitoring, Kyle performed an archaeology and paleontology training session for appropriate project personnel involved with construction of the project. The training session focused on how to identify archaeological and paleontological resources that may be encountered during earthmoving activities, and the procedures to be followed in such an event. No resources were identified during the monitoring effort and these findings were summarized in a report that was submitted to Los Angeles World Airports. Kyle served as project director/manager, crew chief, monitor, and co-author of the final report.

University High School Beautification Project, Los Angeles, CA. *Archaeologist*. Kyle performed archaeological monitoring during earth-moving activities on the campus. The archaeological monitoring program ensured the protection of the village site and springs, and resulted in the discovery of remains of the original portico of the Administration Building which was destroyed by the Long Beach Earthquake of 1933.

Rancho Campana High School and Performing Arts Center Construction Monitoring, Camarillo, CA. *Project Manager*. Kyle led the archaeological and paleontological monitoring for the project as a part of ESA's on-call contract with Oxnard Union High School. He managed and coordinated the effort and prepared the associated report. ESA identified two archaeological resources (56-001512/CA-VEN-1512 and 56-001513/CA-VEN-1513H) during monitoring efforts and several paleontological localities during the monitoring and sediment screening activities and worked together with the Ventureño Chumash regarding treatment for the archaeological resources. Although several archaeological and paleontological resources were encountered during the construction monitoring efforts, the resources were treated in accordance with the mitigation measures and, as a result, the impacts to the resources were reduced to a less than significant level pursuant to the CEQA.

Citron (Stella Park) Townhome Development, Escondido, CA: *Project Manager.* Kyle served as the project manager responsible for overseeing the archaeological and Native American monitoring at the project in accordance with the Conditions of Approval. The project included the construction of a 65-unit townhome development on a vacant 2.29-acre site in the City of Escondido.

Archaeological Monitoring, Test Excavations, and Data Recovery Excavations During Construction of the Crystal Geyser Roxane Cabin Bar Ranch Water Bottling Facility, Olancha, Inyo County, CA. *Principal Investigator/Project Director/Manager/Crew Chief.* Kyle managed/directed archaeological construction monitoring services in accordance with the Cultural Resources mitigation measures in the Mitigation Monitoring and Reporting Program (MMRP) of the EIR for the project. During initial clearing and grubbing activities associated with the project, five prehistoric archeological resources were encountered. Kyle assisted the Applicant in developing a cultural resources treatment plan to address identify, evaluate, and mitigate project impacts to these resources to a less than significant level. Pursuant to the MMRP, this treatment plan was developed in coordination with ESA (Kyle), the County, CG Roxane, and the Lone-Pine Pauite-Shoshone Reservation. The treatment plan included measures for resource avoidance, additional survey, and the excavation of nine controlled excavation units and multiple mechanical backhoe trenches across the project site. More than a 1,000 artifacts have been recovered from this project. This project began in 2015 and continues today.

Fatima Clark

Archaeologist

EDUCATION

BA, Anthropology, California State University, Fullerton

16 YEARS' EXPERIENCE

CERTIFICATIONS/ REGISTRATION

Orange County Certified Archaeologist

HAZWOPER Certified

PROFESSIONAL AFFILIATIONS

Society for California Archaeology

Fatima has 16 years of hands-on archaeological experience and is practiced in project management and client and agency coordination. Her field experience is complimented by the course study and participation in numerous archaeological excavations in California, Arizona, and Peru. Fatima has written California Environmental Quality Act (CEQA)-level technical reports, Environmental Impact Report (EIR) sections, Initial Study sections, archaeological peer reviews, archaeological monitoring reports, and reports pursuant to California Department of Transportation (Caltrans) requirements. She is also experienced in performing archaeological testing, site recordation, laboratory analysis, pedestrian surveys, records searches through several California Historical Resources Information Systems-Information Centers, and monitoring for a wide variety of projects, including mixed-use, residential, and energy, water, and road infrastructure projects. In addition to her archaeology background, Fatima has been cross-trained in conducting paleontological surveys and monitoring and has co-authored and managed associated reports.

Relevant Experience

Los Angeles Department of Water and Power, Fort Independence Travel Plaza Power Project, Independence (Owens Valley), CA. *Project Manager*. Fatima is in the process of preparing the cultural resources assessment in compliance with NEPA, Section 106, and CEQA. LADWP proposes to install 13 new temporary poles, one (1) anchor, and replace one (1) existing pole for a 34.5 kV line extension to provide power during construction of a new Travel Center at 141 N. Highway 395 in Fort Independence, Inyo County, California.

Landify ECT Corporation, Lower Sweetwater Park Project, City of Chula Vista, CA. *Project Manager*. Fatima has prepared a cultural resources assessment in compliance with CEQA. The Project proposes to redevelop the existing 21.3 acre Project Site with sports facilities within the City of Chula Vista.

County of Los Angeles, Department of Public Works, Whittier Boulevard Underground Utility Project, Los Angeles County, CA. *Project Co-Manager.* Fatima prepared the cultural resources assessment in support of a Class 2 Categorical Exemption. The project consists of the removal of utility poles and overhead lines, and the excavation for underground utility lines along Whittier Boulevard right-of-way. One historical resource, the early-to-mid 20th century Los Angeles Railway (or Yellow Cars), was identified in the project area as a result of archival research and geotechnical investigations. Fatima also managed the archaeological monitoring of construction activities and prepared the monitoring report.

City of Carson, Avocet Energy Storage System Project, City of Carson, CA. *Archaeologist.* Fatima managed the preparation of the archaeological and paleontological resources assessment reports in compliance with CEQA. The proposed Project includes the development of an approximately 200-megawatt battery energy storage system on a

6.96-acre site (BESS site), improvements and upgrades to the existing SCE Hinson Substation (SCE Hinson Substation site), the construction of a gen-tie line to connect to substation to the BESS site (proposed gen-tie line route), and other associated improvements. The proposed gen-tie route would cross three jurisdictions including: the City of Carson, the City of Los Angeles, and the City of Long Beach.

Storm Properties, Inc. Storm Hill Lane Project, Rolling Hills, CA. *Project Manager.* Fatima managed the day-to-day coordination for the monitoring and preparation of the archaeological/paleontological monitoring report pursuant to CEQA. As a result of the monitoring, several fossils were identified and these are currently being analyzed. The Project requires the reconstruction and expansion of Storm Hill Lane from the currently addressed and developed lot at 4 Storm Hill Lane to the three undeveloped lots.

Kiewit Infrastructure West Co., Ballona Wetlands Sequence 1 & 2 Restoration, Culver City, CA. *Project Manager.* Fatima managed the coordination for the monitoring with the archaeological and biological monitors, as well as coordination with the client. ESA's monitors were present during trenching and grading within portions of Ballona Creek in Culver City.

Southern California Association of Governments (SCAG) 2024 Connect SoCal Program PEIR, Los Angeles, Riverside, San Bernardino, Orange, Imperial and Ventura, CA. *Deputy Project Manager.* Fatima led the preparation of the PEIR Sections (cultural, paleontological, and tribal resources), as well as coordinated the Native American consultation efforts. Connect SoCal 2024 is a long-range comprehensive plan for the region's multi-modal transportation system. Preparing the Plan is one of SCAG's primary statutory responsibilities under federal and state law. A regional transportation plan (RTP) is the mechanism used in California by both metropolitan planning organizations and regional transportation planning agencies to conduct long-range (at least 20-year) planning in their regions. SCAG must adopt an RTP and update it every four years, or more frequently, if the region is to receive federal and state transportation dollars for public transit, streets/roads, and bicycle and pedestrian improvements.

Culver City, Crossings Campus (Culver City & City of Los Angeles, CA). *Deputy Project Manager.* Fatima led the preparation of the archaeological resources report and coordinated the preparation of the paleontological resources report. Fatima also led the preparation of the EIR sections (cultural, paleo, tribal). Culver Crossings Properties LLC, the Applicant, proposes to develop an office project (Project) on an approximately 4.46-acre site (Project Site) comprised of two properties: one 1.63-acre parcel is located in the City of Culver City (City), while the second 2.83-acre parcel is located in the City of Los Angeles.

County of San Diego Department of Parks and Recreation, Sweetwater Campground Geotech Boring Monitoring, San Diego County, CA. *Project Co- Manager.* Fatima co-managed the archaeological monitoring and coordinated with Red Tail for Native American monitoring and the County of San Diego Department of Parks and Recreation during Geotech borings for the Project.

Los Angeles County Department of Regional Planning, East San Gabriel Valley Area Plan (ESGVAP) Program EIR, Eastern Portion of Los Angeles County, CA. *Deputy Project Manager.* Fatima managed the preparation of the PEIR Sections (cultural, paleontological, and tribal resources). The ESGVAP is part of the Los Angeles County 2035 General Plan, which will require an amendment. The ESGVAP is a long-range policy document developed to guide long-term growth of the area through development of a guiding vision, goals, policies, and implementation actions for the unincorporated communities in the East San Gabriel Valley. The ESGVAP's planning area consists of 24 unincorporated islands and communities and encompasses a total land area of 210.5 square miles.

Fatima Clark (Continued)

Archaeologist

Los Angeles County Department of Regional Planning, Los Angeles County 2045 Climate Action Plan (CAP) Update and PEIR, Los Angeles County, CA. *Deputy Project Manager.* Fatima managed the preparation of the PEIR Sections (cultural, paleontological, and tribal resources). The County adopted the *Unincorporated Los Angeles County Community Climate Action Plan 2020* (2020 CCAP) in 2015 as a component of the Air Quality Element of the General Plan. The 2020 CCAP aligned with General Plan goals, policies, and programs, as well as several other existing programs in Los Angeles County. The 2020 CCAP was the first attempt to set greenhouse gas (GHG) emissions reduction goals in Los Angeles County. Although the targets for the 2020 CCAP were ultimately not fully met, the plan provided a road map for implementing the County's GHG reduction measures. The 2020 CCAP actions were implemented through County Code amendments and programs related to climate action. The Draft 2045 CAP builds on previous work and defines new reduction targets beyond the year 2020.

Eastern Municipal Water District, San Jacinto Valley Groundwater Treatment Facility Project, San Jacinto, CA. *Archaeologist.* Fatima assisted with the Phase II archaeological testing for the Project. The site was the location of the region's first trading post/general store, established ca. 1868. It later became the Palma Hotel, constructed by Henry T. Hewitt. The hotel was also used as a Riverside County hospital before it was destroyed in an earthquake in 1899.

San Manuel Band of Mission Indians, Sand Canyon Flood Control Permitting Project, San Bernardino County, CA. *Archaeologist.* Fatima was in charge of preparing the cultural resources assessment in compliance with Section 106. Fatima also conducted the pedestrian survey. The San Manuel Band of Mission Indians is considering taking over operation and maintenance of a concrete-lined channel and debris basin (known as Sand Creek) along Sand Canyon, within unincorporated San Bernardino County.

City of Long Beach, 615 E. Ocean Boulevard Project, Long Beach, CA. *Deputy Project Manager.* Fatima led the preparation of the cultural and paleontological resources reports in support of an addendum to the Certified City of Long Beach Downtown Plan Program Environmental Impact Report. The Project would develop a 21-story high-rise residential building on an approximately 0.4-acre site located at 615 East Ocean Boulevard within the City's limits (Project site).

City of Long Beach Department of Development Services, Planning Bureau, 7250 Carson Street Project, City of Long Beach, CA. *Deputy Project Manager.* Fatima led the preparation of the cultural and paleontological resources reports in compliance with CEQA. The Project Applicant proposes to subdivide a 20-acre parcel into two parcels (Parcel A and Parcel B). Other than the approval of the tentative parcel map to subdivide the existing parcel, no proposed improvements or development for Parcel A are included as part of the Project. Development of Parcel B (Project Site) would include the development of two fast-food restaurants and parking spaces.

City of Diamond Bar, Crooked Creek Residential Subdivision Project, Los Angeles County, CA. *Archaeologist.* Fatima conducted the archaeological and paleontological resources assessments in compliance with CEQA and the City of Diamond Bar General Plan Policy RC-P-42. The studies included records searches, pedestrian survey, and subsurface sensitivity assessments. No cultural resources were identified in the project site, but the area was found to have the potential to contain subsurface prehistoric archaeological resources and paleontological resources. The project consisted of the development of seven single-family residences and associated infrastructure on approximately 2.5 acres. The project required approval of a Vesting Tentative Tract Map, Conditional Use Permit, Tree Permit, and Development Review.

Re: 5757 Uplander - D202300668.00 Project, Los Angeles County

To Whom It May Concern:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

Attention: Julie Marks

Subject: Preliminary Geotechnical Engineering Investigation
Proposed Mixed Use Development
5757 Uplander Way, Culver City, California

Dear Ms. Marks:

This letter transmits the Preliminary Geotechnical Engineering Investigation for the subject site prepared by Geotechnologies, Inc. This report provides preliminary geotechnical recommendations for the development of the site, including earthwork, seismic design, retaining walls, excavations, shoring and foundation design.

Due to its preliminary nature, this report is not intended for the purpose of obtaining a building permit. A comprehensive geotechnical engineering investigation should be prepared once the proposed development plan achieves refinement. Supplemental exploration and laboratory testing, as well as the re-evaluation of the design parameters provided herein, may be required for the preparation of a comprehensive geotechnical engineering investigation. This subsequent comprehensive geotechnical engineering investigation would be suitable for building permit purposes.

The subsurface conditions described herein have been projected from limited subsurface exploration and laboratory testing. The exploration and testing presented in this report should in no way be construed to reflect any variations which may occur between the exploration locations, or which may result from changes in subsurface conditions.

Should you have any questions please contact this office.

Respectfully submitted,
GEOTECHNOLOGIES, INC.

PRELIMINARY GEOTECHNICAL ENGINEERING INVESTIGATION
PROPOSED MIXED-USE DEVELOPMENT
5757 UPLANDER WAY
CULVER CITY, CALIFORNIA

INTRODUCTION

This report presents the results of the preliminary geotechnical engineering investigation performed on the project site. The purpose of this investigation was to identify the distribution and engineering properties of the geologic materials underlying the site, and to provide preliminary geotechnical recommendations for the conceptual design of the proposed development.

Due to its preliminary nature, this report is not intended for the purpose of obtaining a building permit. A comprehensive geotechnical engineering investigation should be prepared once the proposed development plan achieves refinement. Supplemental exploration and laboratory testing, as well as the re-evaluation of the design parameters provided herein, may be required for the preparation of a comprehensive geotechnical engineering investigation. This subsequent comprehensive geotechnical engineering investigation would be suitable for building permit purposes.

This investigation included seven exploratory excavations, collection of representative samples, laboratory testing, engineering analysis, review of published geologic data, review of available geotechnical engineering information and the preparation of this report. The exploratory excavation locations are shown on the enclosed Plot Plan and Survey Plan. The results of the exploration and the laboratory testing are presented in the Appendix of this report.

PROPOSED DEVELOPMENT

Information concerning the proposed development was furnished by the client. In addition, the Site Plan prepared by AC Martin, dated April 1, 2024, was reviewed for the preparation of this report. The proposed project consists of the construction of six mixed-used structures. The proposed structures will be seven stories in height and will be built over one subterranean parking garage. At this time, it is unknown if the subterranean parking garage will consist of one common podium level, or if it will consist of several independent garages. The exact alignment and depth of the subterranean parking garage is unknown at this time. But based on the experience of this firm, it is anticipated that it may extend to depths ranging between 10 and 15 feet below the ground level.

Structural information is not available at this time. Column loads are estimated to be between 300 and 700 kips. Wall loads are estimated to be between 8 and 25 kips per lineal foot. These loads reflect the dead plus live loads. Grading is expected to consist of excavations in the order of 10 to 18 feet in depth for construction of the proposed subterranean parking garage and foundation elements.

Any changes in the design of the project or location of any structure, as outlined in this report, should be reviewed by this office. The recommendations contained in this report should not be considered valid until reviewed and modified or reaffirmed, in writing, subsequent to such review.

SITE CONDITIONS

The project site is located at 5757 Uplander Way, in Culver City, California. The site is irregular in shape, and approximately 8 acres in area. The site is bounded by Hannum Avenue to the north, Uplander Way to the east, Sumner Way to the south, and Bristol Parkway and two office

developments to the west. The project site is shown relative to nearby topographic features in the enclosed Vicinity Map and Survey Plan.

The site is currently occupied by four office buildings, with surrounding paved parking lots. The existing buildings are one to two stories in height and were built at-grade. Based on review of a topographic survey provided by the client, the current site ground elevations range between approximately 100.7 feet above mean sea level (AMSL) near the northwestern corner of the site, to approximately 116.8 feet AMSL at the east-central area of the site. The enclosed Survey Plan illustrates the current site topography and development. The existing site topography is also illustrated in the enclosed Cross Section A-A'.

Vegetation at the site consists of mature trees, shrubs and grass lawns, contained in planter areas. Drainage across the site appears to be by sheetflow to the city streets.

North Outfall Replacement Sewer

According to the NavigateLA Website, developed by the City of Los Angeles, Bureau of Engineering, Department of Public Works, the western portion of the project site is located immediately adjacent to the North Outfall Replacement Sewer line (N.O.R.S.). In the vicinity of the project site the N.O.R.S. sewer line is approximately 12.5 feet in diameter, and it is supposed to have an invert elevation between approximate elevations 40.71 and 40.85 feet AMSL. A 30-foot-wide easement has been delineated for the N.O.R.S. It is our understanding that the N.O.R.S. utilized a tunneling installation methodology.

The enclosed NavigateLA Map, as well as the N.O.R.S. Map, illustrate the general location and depth of the N.O.R.S. pipe, as well as its easement, in relation to the project site. The potential surcharge influence of the proposed structures should be analyzed when the project scope achieves definition.

GEOTECHNICAL EXPLORATION

FIELD EXPLORATION

The site was explored on March 5, 6, 7 and 8, 2024, by drilling seven borings. The borings were drilled to depths ranging between 40 and 80 feet below the existing site grade, with the aid of a truck-mounted drilling machine using 8-inch diameter hollowstem augers. The exploration locations are shown on the Plot Plan and Survey Plan, and the geologic materials encountered are logged on Plates A-1 through A-7.

The location and elevation of the exploratory borings was determined from information presented in the enclosed Survey Plan. The location and elevation of the exploratory excavations should be considered accurate only to the degree implied by the method used.

Geologic Materials

Fill materials were encountered in all exploratory excavations, to depths ranging between 2 and 5 feet below the existing grade. The fill consists of a mixture of sand, silt and clay, which is medium brown to dark brown in color, and is moist, medium dense to dense, or stiff, and fine grained.

The fill was observed to be underlain by native soils. The native soils are composed of interlayered granular (sandy) soil layers, and fine soil layers. The granular soil layers are composed of sand, silty sand and clayey sand, while the fine layers are composed of sandy to silty clay and sandy to clayey silt. The observed native soils are slightly moist to moist, range from yellowish brown to orange brown to dark brown to gray in color, and are medium dense to very dense, stiff to very stiff, and fine to coarse grained, with occasional gravel.

More detailed descriptions of the earth materials encountered may be obtained from individual logs of the subsurface excavations.

Groundwater

Groundwater was not encountered during exploration, conducted to a maximum depth of 80 feet below the existing grade in Borings B2, B5, and B6. The historically highest groundwater level was established by review of the Venice 7½ Minute Quadrangle Seismic Hazard Evaluation Report, Plate 1.2, Historically Highest Ground Water Contours (CDMG, 2006). Review of this plate indicates that the historically highest groundwater level at the site was on the order of 40 feet below grade. A copy of this plate is included in the Appendix as Historically Highest Groundwater Levels Map.

Fluctuations in the level of groundwater may occur due to variations in rainfall, temperature, and other factors not evident at the time of the measurements reported herein. Fluctuations also may occur across the site. High groundwater levels can result in changed conditions.

Caving

Caving could not be directly observed during exploration due to the continuously-cased design of the hollowstem auger. Based on the experience of this firm, large diameter excavations that encounter granular, cohesionless soils will most likely experience caving.

SEISMIC EVALUATION

REGIONAL GEOLOGIC SETTING

The subject site is located in the Los Angeles Basin. The Los Angeles Basin is located at the northern end of the Peninsular Ranges Geomorphic Province. The basin is bounded by the east and southeast by the Santa Ana Mountains and San Joaquin Hills, to the northwest by the Santa Monica Mountains. Over 22 million years ago the Los Angeles basin was a deep marine basin formed by tectonic forces between the North American and Pacific plates. Since that time, over 5

miles of marine and non-marine sedimentary rock as well as intrusive and extrusive igneous rocks have filled the basin. During the last 2 million years, defined by the Pleistocene and Holocene epochs, the Los Angeles basin and surrounding mountain ranges have been uplifted to form the present-day landscape. Erosion of the surrounding mountains has resulted in deposition of unconsolidated sediments in low-lying areas by rivers such as the Los Angeles River. Areas that have experienced subtle uplift have been eroded with gullies.

REGIONAL FAULTING

Based on criteria established by the California Division of Mines and Geology (CDMG) now called California Geologic Survey (CGS), Faults may be categorized as Holocene-active, Pre-Holocene faults, and Age-undetermined faults. Holocene-active faults are those which show evidence of surface displacement within the last 11,700 years. Pre-Holocene faults are those that have not moved in the past 11,700 years. Age-undetermined faults are faults where the recency of fault movement has not been determined.

Buried thrust faults are faults without a surface expression but are a significant source of seismic activity. They are typically broadly defined based on the analysis of seismic wave recordings of hundreds of small and large earthquakes in the southern California area. Due to the buried nature of these thrust faults, their existence is usually not known until they produce an earthquake. The risk for surface rupture potential of these buried thrust faults is inferred to be low (Leighton, 1990). However, the seismic risk of these buried structures in terms of recurrence and maximum potential magnitude is not well established. Therefore, the potential for surface rupture on these surface-verging splays at magnitudes higher than 6.0 cannot be precluded.

Overland Avenue Fault

As shown in the enclosed Local Geologic Map and NavigateLA Map, the Overland Avenue fault appears to intersect the northeastern corner of the project site. The Overland Fault extends from

the northwest flank of the Baldwin Hills to Santa Monica Boulevard, in the Vicinity of Overland Avenue. The fault trends northwest between the Charnock Fault and the Newport-Inglewood Fault Zone.

The Overland Fault is depicted by Poland, et al. (1959) as an inferred fault, cutting late Pleistocene terrace deposits and concealed under alluvium. Ziony, et al. (1979) note that the alluvium is not cut by the fault, an interpretation that is in agreement with more recent work by Ziony and Jones (1989). The Overland Fault has not been observed at the surface, and there is no direct evidence that this fault has offset late Pleistocene or Holocene age alluvial deposits. The only evidence of the existence of this fault comes from water well data, and not from direct observation.

The dip of the Overland Avenue fault is unknown; however, based on historical water levels, displacement along the fault is believed to be vertical, with an offset of approximately 30 feet. It is anticipated that the west site of the fault has moved downward relative to the east side.

The Overland Fault has been designated as potentially active by the California Geological Survey (CGS), indicating that the fault could potentially have had its most recent surface displacement within the late Quaternary Age (past 700,000 years). To our knowledge, no Special Studies Zones have been delineated along any part of the Overland Avenue Fault by any jurisdiction, including the State of California, the City of Los Angeles, or Culver City. It is our understanding that further investigation of this fault is not required by the State of California, or the local building official.

SEISMIC HAZARDS AND DESIGN CONSIDERATIONS

The primary geologic hazard at the site is moderate to strong ground motion (acceleration) caused by an earthquake on any of the local or regional faults. The potential for other earthquake-induced hazards was also evaluated including surface rupture, liquefaction, dynamic settlement, inundation and landsliding.

Surface Rupture

In 1972, the Alquist-Priolo Special Studies Zones Act (now known as the Alquist-Priolo Earthquake Fault Zoning Act) was passed into law. As revised in 2018, The Act defines "Holocene-active" Faults utilizing the same aging criteria as that used by California Geological Survey (CGS). However, established state policy has been to zone only those faults which have direct evidence of movement within the last 11,700 years. It is this recency of fault movement that the CGS considers as a characteristic for faults that have a relatively high potential for ground rupture in the future.

CGS policy is to delineate a boundary from 200 to 500 feet wide on each side of the Holocene-Active fault trace based on the location precision, the complexity, or the regional significance of the fault. If a site lies within an Earthquake Fault Zone, a geologic fault rupture investigation must be performed that demonstrates that the proposed building site is not threatened by surface displacement from the fault before development permits may be issued.

Ground rupture is defined as surface displacement which occurs along the surface trace of the causative fault during an earthquake. Based on research of available literature and results of site reconnaissance, no known Holocene-active underlie the subject site, and the site is not located within an Alquist-Priolo Earthquake Fault Zone. Therefore, the potential for surface rupture is considered to be low for the project site.

Liquefaction

Liquefaction is a phenomenon in which saturated silty to cohesionless soils below the groundwater table are subject to a temporary loss of strength due to the buildup of excess pore pressure during cyclic loading conditions such as those induced by an earthquake. Liquefaction-related effects include loss of bearing strength, amplified ground oscillations, lateral spreading, and flow failures.

The Seismic Hazards Maps of the State of California (CDMG, 1999), do not classify the site as part of the potentially "Liquefiable" area. This determination is based on groundwater depth records, soil type and distance to a fault capable of producing a substantial earthquake. A copy of this map is included in the Appendix of this report.

Three site-specific liquefaction analyses were performed following the Recommended Procedures for Implementation of the California Geologic Survey Special Publication 117A (SP117A), Guidelines for Analyzing and Mitigating Seismic Hazards in California (CGS, 2008), and the EERI Monograph (MNO-12) by Idriss and Boulanger (2008). This semi-empirical method is based on a correlation between measured values of Standard Penetration Test (SPT) resistance and field performance data. Both the historically highest groundwater level and the current groundwater level were utilized for their individual liquefaction analysis. These analyses are attached.

Section 11.8.3 of ASCE 7-16 indicates that the potential for liquefaction shall be evaluated utilizing an acceleration consistent with the Maximum Considered Earthquake Geometric Mean (MCE_G) Peak Ground Acceleration (PGA). Utilizing the Office of Statewide Health Planning and Development (OSHPD) seismic utility program, this corresponds to a Site Modified Peak Ground Acceleration (PGA_M) of 0.90g. The United States Geological Survey (USGS) Probabilistic Seismic Hazard Deaggregation program (USGS, 2014) indicates a PGA of 0.85g (2 percent in 50 years ground motion) and a mean magnitude of 6.7 for the Project Site. The liquefaction potential evaluations were performed by utilizing a magnitude 6.7 earthquake, and a peak horizontal acceleration of 0.90g.

The enclosed "Empirical Estimations of Liquefaction Potential" are based on Borings B2, B5 and B6. SPT data were collected at 5-foot intervals. Samples of the collected materials were conveyed to the laboratory for testing and analysis. The percent passing a Number 200 sieve is presented on the enclosed E-Plate.

The procedure presented in the SP117A guidelines was followed in analyzing the liquefaction potential of the Project Site. The SP117A guidelines were developed based on a paper titled, "Assessment of the Liquefaction Susceptibility of Fine-Grained Soils", by Bray and Sancio (2006). According to the SP117A guidelines, soils having a Plastic Index greater than 18 exhibit clay-like behavior, and the liquefaction potential of these soils are considered to be low. Therefore, where the results of Atterberg Limits testing showed a Plastic Index greater than 18, the soils would be considered non-liquefiable, and the analysis of these soil layers was turned off in the liquefaction susceptibility column. The results of Atterberg Limits testing are shown in Plate F.

Based on SP117A, a factor of safety against the occurrence of liquefaction greater than about 1.3 can be considered an acceptable level of risk where high-quality, site-specific penetration resistance and geotechnical laboratory data is collected. The site-specific liquefaction analyses demonstrate that the Project Site soils analyzed would have a factor of safety significantly higher than 1.3. Therefore, the analyzed soils would not be prone to liquefaction during the ground motion expected during the design basis earthquake. Furthermore, the Project Site soils analyzed are not expected to be affected by potential impacts related to liquefaction, such as lateral spreading and surface manifestation.

Dynamic Dry Settlement

Seismically-induced settlement or compaction of dry or moist, cohesionless soils can be an effect related to earthquake ground motion. Such settlements are typically most damaging when the settlements are differential in nature across the length of structures.

Some seismically-induced settlement of the proposed structures should be expected as a result of strong ground-shaking, however, due to the uniform nature of the underlying geologic materials, excessive differential settlements are not expected to occur.

Tsunamis, Seiches and Flooding

Tsunamis are large ocean waves generated by sudden water displacement caused by a submarine earthquake, landslide, or volcanic eruption. Review of the County of Los Angeles Flood and Inundation Hazards Map, Leighton (1990), indicates the site does not lie within the mapped tsunami inundation boundaries. The site is far and/or high enough from the ocean such that it would not be prone to hazards of a tsunami or seiche.

Review of the County of Los Angeles Flood and Inundation Hazards Map (Leighton, 1990), indicates the site does not lie within the inundation boundaries of a reservoir.

Landsliding

The probability of seismically-induced landslides occurring on the site is considered to be low due to the gentle elevation relief observed across or adjacent to the site.

CONCLUSIONS AND RECOMMENDATIONS

Based upon the exploration, laboratory testing, and research, it is the preliminary finding of Geotechnologies, Inc. that construction of the proposed project is considered feasible from a geotechnical engineering standpoint provided the advice and recommendations presented herein are followed and implemented during construction.

Due to its preliminary nature, this report is not intended for the purpose of obtaining a building permit. A comprehensive geotechnical engineering investigation should be prepared once the proposed development plan achieves refinement. Supplemental exploration and laboratory testing, as well as the re-evaluation of the design parameters provided herein, may be required for the preparation of a comprehensive geotechnical engineering investigation. This subsequent

comprehensive geotechnical engineering investigation would be suitable for building permit purposes.

Groundwater was not encountered during exploration, conducted to a maximum depth of 80 feet below the existing grade. Fill materials were encountered in all the exploratory excavations, to depths ranging between 2 and 5 feet below the existing grade. The existing fill materials are not suitable for support of the proposed structures.

It is anticipated that the existing fill materials will be removed during the excavation of the proposed subterranean parking garage. The proposed structures may be supported by a conventional foundation system, bearing in the native soils expected at the subterranean subgrade.

The exact alignment and depth of the proposed subterranean levels is unknown at this time. The installation of temporary shoring will be required to stabilize temporary vertical subterranean excavations. As an option, where sufficient space is available, the temporary subterranean excavations may be cut at a 1:1 slope gradient to a maximum height of 15 feet, and at a 1½:1 (horizontal: vertical) to a maximum height of 25 feet.

According to the NavigateLA Website, the western portion of the project site is located immediately adjacent to the North Outfall Replacement Sewer line (N.O.R.S.). In the vicinity of the project site the N.O.R.S. sewer line is approximately 12.5 feet in diameter, and it is supposed to have an invert elevation between approximate elevations 40.71 and 40.85 feet AMSL. A 30-foot-wide easement has been delineated for the N.O.R.S. It is our understanding that the N.O.R.S. utilized a tunneling installation methodology. Once the proposed plan development achieves refinement, the potential surcharge influence of the proposed structures onto the N.O.R.S. tunnel should be analyzed.

The validity of the conclusions and design recommendations presented herein is dependent upon review of the geotechnical aspects of the proposed construction by this firm. The subsurface conditions described herein have been projected from excavations on the site as indicated and should in no way be construed to reflect any variations which may occur between these excavations, or which may result from changes in subsurface conditions. Any changes in the design, as outlined in this report, should be reviewed by this office. The recommendations contained herein should not be considered valid until reviewed and modified or reaffirmed subsequent to such review.

SEISMIC DESIGN CONSIDERATIONS

California Building Code Seismic Parameters

Based on information derived from the subsurface investigation, the subject site is classified as Site Class D, which corresponds to a "Stiff Soil" Profile, according to Table 20.3-1 of ASCE 7-16. This information and the site coordinates were input into the OSHPD seismic utility program (https://www.seismicmaps.org/) in order to calculate ground motion parameters for the site.

CALIFORNIA BUILDING CODE SEISMIC PARAMETERS	
California Building Code	2022
ASCE Design Standard	7-16
Site Class	D
Mapped Spectral Acceleration at Short Periods (S_S)	1.906g
Site Coefficient (F_a)	1.0
Maximum Considered Earthquake Spectral Response for Short Periods (S_{MS})	1.906g
Five-Percent Damped Design Spectral Response Acceleration at Short Periods (S_{DS})	1.271g
Mapped Spectral Acceleration at One-Second Period (S_1)	0.671g
Site Coefficient (F_v)	1.7*
Maximum Considered Earthquake Spectral Response for One-Second Period (S_{M1})	1.141g*
Five-Percent Damped Design Spectral Response Acceleration for One-Second Period (S_{D1})	0.761g*

** These values are determined based on the tabulated values shown on ASCE 7-16, Table 11.4-2 for the Long-Period Site Coefficient, F_v. It should be noted that the exception to performing a site-specific hazard analysis for structures on Site Class D for values of S_1 greater than or equal to 0.2 presented by ASCE 7-16 may be followed, provided the conditions outlined in the ASCE 7-16 Section 11.4.8 (including Supplement 3 of the ASCE 7 Standards) are implemented in the structural design and analyses. This exception recommends that, where a site-specific ground motion hazard analysis is not required, the S_{M1} determined by eq. (11.4-2) is increased by 50% for all applications of S_{M1} in this standard. The resulting value of the parameter S_{D1} determined by Eq. (11.4-4) shall be used for all applications of S_{D1} in this standard. This would require that the S_{M1} and S_{D1} values provided in the above table are increased by 50%.*

EXPANSIVE SOILS

The upper onsite soils are in the moderate to high expansion range. The Expansion Index was found to be between 54 and 128 for bulk samples representative of the upper strata. Recommended reinforcing is provided in the "Foundation Design" and "Slab-On-Grade" sections of this report.

WATER-SOLUBLE SULFATES

The Portland cement portion of concrete is subject to attack when exposed to water-soluble sulfates. Usually, the two most common sources of exposure are from soil and marine environments.

The sources of natural sulfate minerals in soils include the sulfates of calcium, magnesium, sodium, and potassium. When these minerals interact and dissolve in subsurface water, a sulfate concentration is created, which will react with exposed concrete. Over time sulfate attack will destroy improperly proportioned concrete well before the end of its intended service life.

The water-soluble sulfate content of the onsite geologic materials was tested by California Test 417. The water-soluble sulfate content was determined to be less than 0.2% percentage by weight for the soils tested. Based on the most recent revision to American Concrete Institute (ACI) Standard 318, the sulfate exposure is considered to be moderate for geologic materials with less than 0.2% and Type II cement may be utilized for concrete foundations in contact with the site soils. In addition, a water-cement ratio of 0.5 should be maintained in the poured concrete.

The design of the concrete mix is not within the area of expertise of the geotechnical engineer. It is recommended that a competent engineer familiar with concrete mix design should develop the recommendations for this project based on the tested sulfate exposure indicated above.

GRADING GUIDELINES

The following recommendations are provided for any miscellaneous grading that may be required, such as subgrade preparation, and the backfill of utility trenches or foundations.

Site Preparation

- A thorough search should be made for possible underground utilities and/or structures. Any existing or abandoned utilities or structures located within the footprint of the proposed grading should be removed or relocated as appropriate.

- All vegetation, existing fill, and soft or disturbed geologic materials should be removed from the areas to receive controlled fill. All existing fill materials and any disturbed geologic materials resulting from grading operations shall be completely removed and properly recompacted prior to foundation excavation.

- Any vegetation or associated root system located within the footprint of the proposed structures should be removed during grading.

- Subsequent to the indicated removals, the exposed grade shall be scarified to a depth of six inches, moistened to optimum moisture content, and recompacted in excess of the minimum required comparative density.

- The excavated areas shall be observed by the geotechnical engineer prior to placing compacted fill.

Compaction

All fill should be mechanically compacted in layers not more than 8 inches thick. Based on the moderate to high expansion index of some of the on-site soils, the materials placed should be moisture conditions to approximately 5 percent over the optimum moisture content of the particular material placed. All fill shall be compacted to at least 90 percent of the maximum laboratory density for the materials used. The maximum density shall be determined by the laboratory operated by Geotechnologies, Inc. in general accordance with the most recent revision of ASTM D 1557.

Field observation and testing shall be performed by a representative of the geotechnical engineer during grading to assist the contractor in obtaining the required degree of compaction and the proper moisture content. Where compaction is less than required, additional compactive effort

shall be made with adjustment of the moisture content, as necessary, until a minimum of 90 percent compaction is obtained.

Acceptable Materials

The excavated onsite materials are considered satisfactory for reuse in the controlled fills as long as any debris, organic matter, and oversize materials are removed. The size of the materials to be recompacted shall not exceed 6 inches on any dimension.

Any imported materials shall be observed and tested by the representative of the geotechnical engineer prior to use in fill areas. Imported materials should contain sufficient fines so as to be relatively impermeable and result in a stable subgrade when compacted. Any required import materials should consist of geologic materials with an expansion index of less than 50. The water-soluble sulfate content of the import materials should be less than 0.1% percentage by weight.

Imported materials should be free from chemical or organic substances which could affect the proposed development. A competent professional should be retained in order to test imported materials and address environmental issues and organic substances which might affect the proposed development.

Utility Trench Backfill

Utility trenches should be backfilled with controlled fill. The utility should be bedded with clean sands at least one foot over the crown. The remainder of the backfill may be onsite soil compacted to 90 percent of the laboratory maximum density, in layers not exceeding 8 inches in thickness. Utility trench backfill should be tested by representatives of this firm in accordance with the most recent revision of ASTM D-1557.

Wet Soils

At the time of exploration some of the soils which will be exposed at the bottom of the excavations were locally above optimum moisture content. It is anticipated that some of the excavated material to be placed as compacted fill, and some of the materials exposed at the bottom of the excavated plane may require drying and aeration prior to recompaction.

Pumping (yielding or vertical deflection) of the high-moisture content soils at the bottom of the excavation may occur during operation of heavy equipment. Where pumping is encountered, angular minimum ¾-inch gravel and/or crushed concrete should be placed and worked into the subgrade. The exact thickness of the gravel would be a trial and error procedure, and would be determined in the field. It would likely be on the order of 1 to 2 feet thick.

The gravel will help to densify the subgrade as well as function as a stabilization material upon which heavy equipment may operate. It is not recommended that rubber tire construction equipment attempt to operate directly on the pumping subgrade soils prior to placing the gravel. Direct operation of rubber tire equipment on the soft subgrade soils will likely result in excessive disturbance to the soils, which in turn will result in a delay to the construction schedule since those disturbed soils would then have to be removed and properly recompacted. Extreme care should be utilized to place gravel as the subgrade becomes exposed.

Shrinkage

Shrinkage results when a volume of soil removed at one density is compacted to a higher density. A shrinkage factor between 5 and 15 percent should be anticipated when excavating and recompacting the existing fill and underlying native geologic materials on the site to an average comparative compaction of 92 percent.

Weather Related Grading Considerations

When rain is forecast all fill that has been spread and awaits compaction shall be properly compacted prior to stopping work for the day or prior to stopping due to inclement weather. These fills, once compacted, shall have the surface sloped to drain to an area where water can be removed.

Temporary drainage devices should be installed to collect and transfer excess water to the street in non-erosive drainage devices. Drainage should not be allowed to pond anywhere on the site, and especially not against any foundation or retaining wall.

Work may start again, after a period of rainfall, once the site has been reviewed by a representative of this office. Any soils saturated by the rain shall be removed and aerated so that the moisture content will fall within three percent of the optimum moisture content.

Surface materials previously compacted before the rain shall be scarified, brought to the proper moisture content and recompacted prior to placing additional fill, if considered necessary by a representative of this firm.

Geotechnical Observations and Testing During Grading

Geotechnical observations and testing during grading are considered to be a continuation of the geotechnical investigation. It is critical that the geotechnical aspects of the project be reviewed by representatives of Geotechnologies, Inc. during the construction process. Compliance with the design concepts, specifications or recommendations during construction requires review by this firm during the course of construction. Any fill which is placed should be observed, tested, and verified if used for engineered purposes. Please advise this office at least twenty-four hours prior to any required site visit.

FOUNDATION DESIGN

Conventional

The proposed structures may be supported by a conventional shallow foundation system, consisting of continuous wall foundations and isolated column foundations. The proposed foundation system may bear in the native soils expected to be exposed at the subterranean subgrade.

Continuous foundations may be designed for a bearing capacity of 3,000 pounds per square foot and should be a minimum of 12 inches in width, 24 inches in depth below the lowest adjacent grade and 24 inches into the recommended native soils.

Column foundations may be designed for a bearing capacity of 3,500 pounds per square foot and should be a minimum of 24 inches in width, 24 inches in depth below the lowest adjacent grade and 24 inches into the recommended native soils.

The bearing capacity increase for each additional foot of width is 200 pounds per square foot. The bearing capacity increase for each additional foot of depth is 500 pounds per square foot. The maximum recommended bearing capacity is 6,000 pounds per square foot.

The bearing capacities indicated above are for the total of dead and frequently applied live loads and may be increased by one third for short duration loading, which includes the effects of wind or seismic forces.

Foundation Reinforcement

All continuous foundations should be reinforced with a minimum of four #4 steel bars. Two should be placed near the top of the foundation, and two should be placed near the bottom.

Lateral Design

Resistance to lateral loading may be provided by friction acting at the base of foundations and by passive earth pressure. An allowable coefficient of friction of 0.35 may be used with the dead load forces.

Passive geologic pressure for the sides of foundations poured against undisturbed or recompacted soil may be computed as an equivalent fluid having a density of 250 pounds per cubic foot with a maximum earth pressure of 1,500 pounds per square foot.

The passive and friction components may be combined for lateral resistance without reduction. A one-third increase in the passive value may be used for short duration loading such as wind or seismic forces.

Foundation Settlement

Settlement of the foundation system is expected to occur on initial application of loading. The maximum settlement is not expected to exceed 1-inch and occur below the heaviest loaded columns. Differential settlement is not expected to exceed ½-inch.

Foundation Observations

It is critical that all foundation excavations are observed by a representative of this firm to verify penetration into the recommended bearing materials. The observation should be performed prior to the placement of reinforcement. Foundations should be deepened to extend into satisfactory geologic materials, if necessary.

Foundation excavations should be cleaned of all loose soils prior to placing steel and concrete. Any required foundation backfill should be mechanically compacted, flooding is not permitted.

RETAINING WALL DESIGN

Based on the estimated depth of the proposed subterranean parking garage, it is anticipated that retaining walls up to 15 feet in height will be required for the project. As a precautionary measure, recommendations for the design of underground retaining walls up to a height of 20 feet have been provided herein. Retaining walls may be designed as indicated below, depending on whether the walls will be restrained or cantilevered. Retaining wall foundations may be designed in accordance with the provisions of the "Foundation Design" section of this report.

Additional pressure should be added for a surcharge condition due to vehicular traffic or adjacent structures. Based on review of the enclosed Plot Plan, the proposed retaining walls are not anticipated to be surcharged by neighboring structures. Vehicular traffic is expected in the vicinity of the proposed subterranean retaining walls. For traffic surcharge, the upper 10 feet of any retaining wall adjacent to streets, driveways or parking areas should be designed to resist a uniform lateral pressure of 100 pounds per square foot, acting as a result of an assumed 300 pounds per square foot traffic surcharge. If the traffic is more than 10 feet from the retaining walls, the traffic surcharge may be neglected.

Restrained Retaining Walls

Restrained subterranean retaining walls up to 20 feet in height and supporting a level back slope may be designed to resist a triangular distribution of earth pressure. It is recommended the walls be designed to resist the greater of the at-rest pressure, or the active pressure plus the seismic pressure, as discussed in the "Dynamic (Seismic) Earth Pressure" section below.

RESTRAINED BASEMENT WALLS		
	AT-REST EARTH PRESSURE	**ACTIVE EARTH PRESSURE *(To be Combined with Dynamic Seismic Earth Pressure)**
Height of Wall (Feet)	Triangular Distribution of Pressure (Pounds per Cubic Foot)	Triangular Distribution of Pressure (Pounds per Cubic Foot)
Up to 20 feet	64	39*

The lateral earth pressure recommended above for retaining walls assumes that a permanent drainage system will be installed so that external water pressure will not be developed against the walls. Also, where necessary, the retaining walls should be designed to accommodate any surcharge pressures that may be imposed by adjacent traffic and existing structures.

Dynamic (Seismic) Earth Pressure

Retaining walls exceeding 6 feet in height shall be designed to resist the additional earth pressure caused by seismic ground shaking. A triangular pressure distribution should be utilized for the additional seismic loads, with an equivalent fluid pressure of 24 pounds per cubic foot. When using the load combination equations from the building code, the seismic earth pressure should be

combined with the lateral active earth pressure for analyses of restrained basement walls under seismic loading condition. The dynamic earth pressure may be omitted where the retaining wall is 6 feet in height or less.

Miscellaneous Cantilever Retaining Walls

Cantilever retaining walls up to 12 feet in height supporting a level back slope may be designed utilizing a triangular distribution of pressure. Cantilever retaining walls may be designed for 45 pounds per cubic foot for walls retaining up to 12 feet of earth. The moderate to highly expansive potential of the fine soils are considered in this pressure. This pressure assumes a subdrain system will be installed behind the wall. In addition, cantilever walls greater than 6 feet in height shall be designed to resist seismic earth pressure indicated in the "Dynamic (Seismic) Earth Pressure" section above.

For this equivalent fluid pressure to be valid, walls which are to be restrained at the top should be backfilled prior to the upper connection being made. Additional active pressure should be added for a surcharge condition due to sloping ground, vehicular traffic or adjacent structures.

Retaining Wall Drainage

All retaining walls shall be provided with a subdrain system in order to minimize the potential for future hydrostatic pressure buildup behind the proposed retaining walls. Subdrains may consist of four-inch diameter perforated pipes, placed with perforations facing down. The pipe shall be encased in at least one-foot of gravel around the pipe. The gravel shall be wrapped in filter fabric. The gravel may consist of three-quarter inch to one-inch crushed rocks.

As an alternative to the standard perforated subdrain pipe and gravel drainage system, the use of gravel pockets and weepholes is an acceptable drainage method. Weepholes shall be a minimum

of 4 inches in diameter, placed at 8 feet on center along the base of the wall. Gravel pockets shall be a minimum of 1 cubic foot in dimension and may consist of three-quarter inch to one-inch crushed rocks, wrapped in filter fabric. A collector pipe shall be installed to direct collected waters to a sump

Certain types of subdrain pipe are not acceptable to the various municipal agencies, it is recommended that prior to purchasing subdrainage pipe, the type and brand is cleared with the proper municipal agencies. Subdrainage pipes should outlet to an acceptable location. Some municipalities do not allow the use of flat-drainage products, such as Miradrain. The use of such a product should be researched with the building official.

The lateral earth pressures recommended above for retaining walls assume that a permanent drainage system will be installed so that external water pressure will not be developed against the walls. If a drainage system is not provided, the walls should be designed to resist an external hydrostatic pressure due to water in addition to the lateral earth pressure. In any event, it is recommended that retaining walls be waterproofed.

Sump Pump Design

The purpose of the recommended retaining wall backdrainage system is to relieve hydrostatic pressure. Groundwater was not encountered during exploration to a depth of 80 feet. Therefore, the only water which could affect the proposed retaining walls would be irrigation water and precipitation. Additionally, the proposed site grading is such that all drainage is directed to the street and the structure has been designed with adequate non-erosive drainage devices.

Based on these considerations the retaining wall backdrainage system is not expected to experience an appreciable flow of water, and in particular, no groundwater will affect it. However, for the purposes of design, a flow of 5 gallons per minute may be assumed.

Waterproofing

Moisture effecting retaining walls is one of the most common post construction complaints. Poorly applied or omitted waterproofing can lead to effloresence or standing water inside the building. Efflorescence is a process in which a powdery substance is produced on the surface of the concrete by the evaporation of water. The white powder usually consists of soluble salts such as gypsum, calcite, or common salt. Efflorescence is common to retaining walls and does not affect their strength or integrity.

It is recommended that retaining walls be waterproofed. Waterproofing design and inspection of its installation is not the responsibility of the geotechnical engineer. A qualified waterproofing consultant should be retained in order to recommend a product or method which would provide protection to below grade walls.

Retaining Wall Backfill

Any required backfill should be mechanically compacted in layers not more than 8 inches thick, to at least 90 percent relative compaction, obtainable by the most recent revision of ASTM D 1557 method of compaction. Flooding should not be permitted. Proper compaction of the backfill will be necessary to reduce settlement of the backfill and to reduce settlement of overlying walks and paving. Some settlement of required backfill should be anticipated, and any utilities supported therein should be designed to accept differential settlement.

TEMPORARY EXCAVATIONS

Excavations up to a depth of 20 feet below the existing grade may be anticipated for construction of the proposed subterranean levels and foundation elements. The excavations are expected to expose fill and dense native soils, which are suitable for vertical excavations up to 5 feet where

not surcharged by adjacent traffic or structures. Vertical excavations exceeding 5 feet, or excavations which will be surcharged by adjacent traffic or structures should be shored.

Where sufficient space is available, temporary unsurcharged embankments could be cut at a uniform 1:1 slope gradient to a maximum height of 15 feet, and at a 1½:1 (H:V) up to a maximum height of 25 feet. A uniform sloped excavation is sloped from bottom to top and does not have a vertical component.

Where sloped embankments are utilized, the tops of the slopes should be barricaded to prevent vehicles and storage loads near the top of slope within a horizontal distance equal to the depth of the excavation. If the temporary construction embankments are to be maintained during the rainy season, berms are strongly recommended along the tops of the slopes to prevent runoff water from entering the excavation and eroding the slope faces. Water should not be allowed to pond on top of the excavation nor to flow towards it.

Excavation Observations

It is critical that the soils exposed in the cut slopes are observed by a representative of Geotechnologies, Inc. during excavation so that modifications of the slopes can be made if variations in the geologic material conditions occur. Many building officials require that temporary excavations should be made during the continuous observations of the geotechnical engineer. All excavations should be stabilized within 30 days of initial excavation.

SHORING DESIGN

The following information on the design and installation of the shoring is as complete as possible at this time. It is suggested that Geotechnologies, Inc. review the final shoring plans and specifications prior to bidding or negotiating with a shoring contractor.

One method of shoring would consist of steel soldier piles. The soldier piles may be designed as cantilevers or laterally braced utilizing drilled tied-back anchors or raker braces.

Soldier Piles – Drilled

Drilled cast-in-place soldier piles should be placed no closer than 2½ diameters on center. The minimum diameter of the piles is 18 inches. Structural concrete should be used for the soldier piles below the excavation; lean-mix concrete may be employed above that level. As an alternative, lean-mix concrete may be used throughout the pile where the reinforcing consists of a wideflange section. The slurry must be of sufficient strength to impart the lateral bearing pressure developed by the wideflange section to the earth materials. For soldier pile design purposes, an allowable passive value for the earth materials below the bottom plane of excavation may be assumed to be 600 pounds per square foot per foot of depth, up to a maximum of 6,000 pounds per square foot. To develop the full lateral value, provisions should be implemented to assure firm contact between the soldier piles and the undisturbed earth materials.

The frictional resistance between the soldier piles and retained earth material may be used to resist the vertical component of the anchor load. The coefficient of friction may be taken as 0.37 based on uniform contact between the steel beam and lean-mix concrete and retained earth. The portion of soldier piles below the plane of excavation may also be employed to resist the downward loads. The downward capacity may be determined using a frictional resistance of 500 pounds per square foot. The minimum depth of embedment for shoring piles is 5 feet below the bottom of the footing excavation, or 7 feet below the bottom of excavated plane, whichever is deeper.

Caving of the granular soil layers may occur during drilling of piles. In the event of caving, casing will most likely be required during drilling in order to maintain open shafts. If casing is used, extreme care should be employed so that the pile is not pulled apart as the casing is withdrawn. At no time should the distance between the surface of the concrete and the bottom of the casing be less than 5 feet.

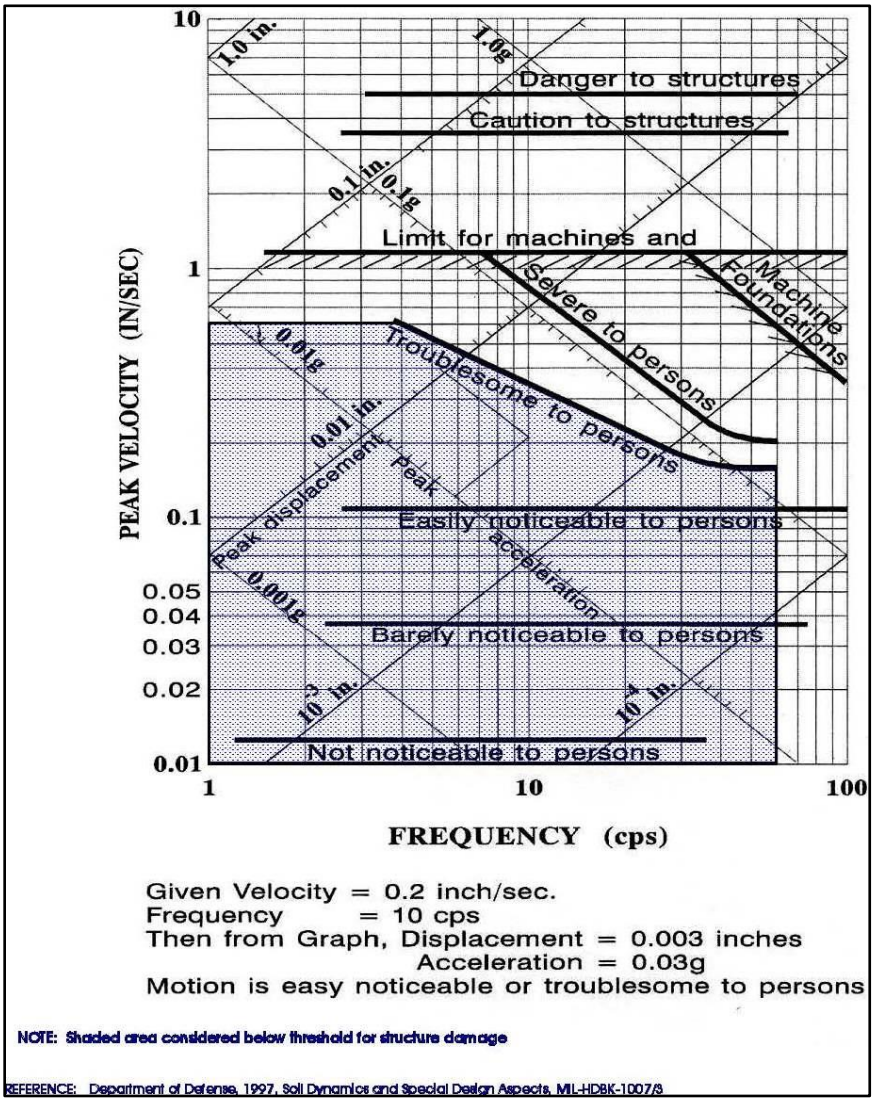
Soldier Piles – Vibration Method of Installation

I-beam soldier piles may also be vibrated into place as a means of installation. When using the vibration method of installing the soldier beams, the minimum embedment depth shall be 10 feet below the lowest excavated plane. The available passive resistance of the pile may be determined using the diagonal length from the outer edges of opposite flange sections. Similar to the drilled soldier piles, the allowable passive value for the earth materials below the bottom plane of excavation may be assumed to be 600 pounds per square foot per foot of depth, up to a maximum of 6,000 pounds per square foot.

Predrilling may be utilized by the shoring contractor in order to vibrate and install the shoring beams to the design depths. However, the depth of the predrilled holes should not exceed the planned excavation depth. In addition, it is recommended that the diameter of the predrilled holes does not exceed 75 percent of the depth of the web of the I-beam. When predrilling, the auger shall be back spun out of the pilot holes, leaving the soils in place. All shoring (predrilling, installation of shoring piles, and lagging) shall be performed under the continuous inspections by a deputy grading inspector of this firm.

The allowable level of vibration that results from the installation of the piles should not exceed a threshold where occupants of the nearby structures are disturbed, despite higher vibration tolerances that a building may endure without deformation. There is a relationship between particle velocity and vibration frequency that will occur due to the installation. A range of tolerable particle peak velocity and frequency of vibration is shown in the graph below. The shaded area on the graph is considered within acceptable limits to avoid damage to nearby structures. The acceptable limits should be measured at the neighboring structures.

The vibrations should be monitored with a seismograph during pile installation to detect the magnitude of vibration and oscillation experienced by the adjacent structure. The results should be recorded and provided to the owner. If, during installation, the vibrations exceed the range shown on the graph below, the shoring contractor should modify the installation procedure to reduce the values to the acceptable range.



Lagging

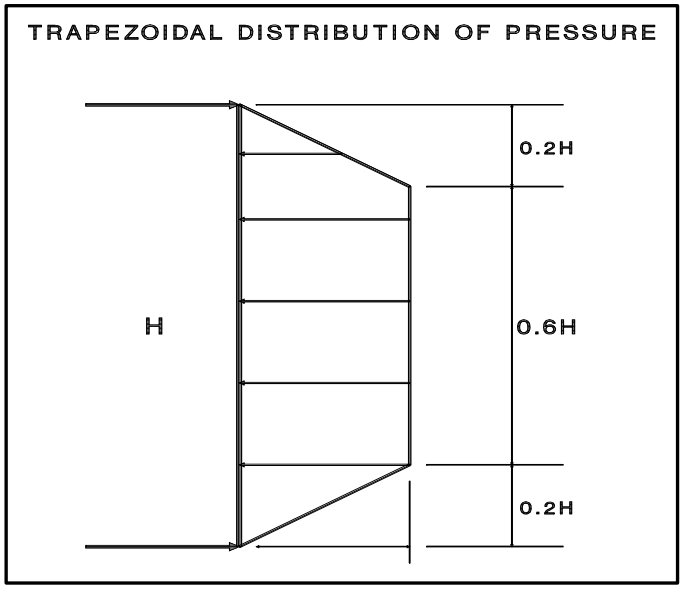
Soldier piles and anchors should be designed for the full anticipated pressures. Due to arching in the geologic materials, the pressure on the lagging will be less. It is recommended that the lagging should be designed for the full design pressure but be limited to a maximum of 400 pounds per square foot. It is recommended that a representative of this firm observe the installation of lagging to insure uniform support of the excavated embankment.

Lateral Pressures

Cantilevered shoring supporting a level backslope may be designed utilizing a triangular distribution of pressure as indicated in the following table:

HEIGHT OF SHORING "H" (feet)	EQUIVALENT FLUID PRESSURE (pounds per cubic foot)
Up to 20	30

A trapezoidal distribution of lateral earth pressure would be appropriate where shoring is to be restrained at the top by bracing or tie backs, with the trapezoidal distribution as shown in the diagram below.



Restrained shoring supporting a level backslope may be designed utilizing a trapezoidal distribution of pressure as indicated in the following table:

HEIGHT OF SHORING "H" (feet)	DESIGN SHORING FOR (Where H is the height of the wall)
Up to 20	19H
20 to 25	22H

Where a combination of sloped embankment and shoring is utilized, the pressure will be greater and must be determined for each combination. Additional active pressure should be applied where the shoring will be surcharged by adjacent traffic or structures.

Tied-Back Anchors

Tied-back anchors may be used to resist lateral loads. Friction anchors are recommended. For design purposes, it may be assumed that the active wedge adjacent to the shoring is defined by a plane drawn 35 degrees with the vertical through the bottom plane of the excavation. Friction anchors should extend a minimum of 20 feet beyond the potentially active wedge. Anchors should be placed at least 6 feet on center to be considered isolated.

Drilled friction anchors constructed without utilizing pressure-grouting techniques may be designed for a skin friction of 500 pounds per square foot. Only the frictional resistance developed beyond the active wedge would be effective in resisting lateral loads. Where belled anchors are utilized, the capacity of belled anchors may be designed by applying the skin friction over the surface area of the bonded anchor shaft. The diameter of the bell may be utilized as the diameter of the bonded anchor shaft when determining the surface area. This implies that in order for the belled anchor to fail, the entire parallel soil column must also fail.

Depending on the techniques utilized, and the experience of the contractor performing the installation, it is anticipated that a skin friction of 2,500 pounds per square foot could be utilized for post-grouted anchors, provided the design does not rely on end-bearing plates to provide the necessary capacity. Only the frictional resistance developed beyond the active wedge would be effective in resisting lateral loads.

Anchor Installation

Tied-back anchors may be installed between 20 and 45 degrees below the horizontal. Where caving of the anchor shafts is experienced, the following provisions should be implemented in order to minimize such caving. The anchor shafts should be filled with concrete by pumping from the tip out, and the concrete should extend from the tip of the anchor to the active wedge. In order to minimize the chances of caving, it is recommended that the portion of the anchor shaft within the active wedge be backfilled with sand before testing the anchor. This portion of the shaft should be filled tightly and flush with the face of the excavation. The sand backfill should be placed by pumping; the sand may contain a small amount of cement to facilitate pumping.

Tieback Anchor Testing

At least 10 percent of the anchors should be selected for "Quick", 200 percent tests. It is recommended that at least three of these anchors be selected for 24-hour, 200 percent tests. It is recommended that the 24-hour tests be performed prior to installation of additional tiebacks. The purpose of the 200 percent tests is to verify the friction value assumed in design. The anchors should be tested to develop twice the assumed friction value. Where satisfactory tests are not achieved on these initial anchors, the anchor diameter and/or length should be increased until satisfactory test results are obtained.

The total deflection during the 24-hour 200 percent test should not exceed 12 inches. During the 24-hour tests, the anchor deflection should not exceed 0.75 inches measured after the 200 percent test load is applied.

For the "quick" 200 percent tests, the 200 percent test load should be maintained for 30 minutes. The total deflection of the anchor during the 200 percent quick tests should not exceed 12 inches; the deflection after the 200 percent load has been applied should not exceed 0.25 inch during the 30-minute period.

All of the remaining anchors should be tested to at least 150 percent of design load. The total deflection during the 150 percent test should not exceed 12 inches. The rate of creep under the 150 percent test load should not exceed 0.1 inch over a 15-minute period in order for the anchor to be approved for the design loading.

After a satisfactory test, each anchor should be locked-off at the design load. This should be verified by rechecking the load in the anchor. The load should be within 10 percent of the design load. Where satisfactory tests are not attained, the anchor diameter and/or length should be increased, or additional anchors installed until satisfactory test results are obtained. Where post-grouted anchors are utilized, additional post-grouting may be required. The installation and testing of the anchors should be observed by a representative of the soils engineer.

Internal Bracing

Rakers may be utilized to brace the soldier piles in lieu of tieback anchors. The raker bracing could be supported laterally by temporary concrete footings (deadmen) or by the permanent interior footings. An allowable bearing pressure of 4,000 pounds per square foot may be used for the design a raker foundations. This bearing pressure is based on a raker foundation a minimum of 24 inches in width and length as well as 24 inches in depth into native alluvial soils. The base of the raker

foundations should be horizontal. Care should be employed in the positioning of raker foundations so that they do not interfere with the foundations for the proposed structure.

Deflection

It is difficult to accurately predict the amount of deflection of a shored embankment. It should be realized that some deflection will occur. It is recommended that shoring deflection be limited to ½ inch at the top of the shored embankment where a structure is within a 1:1 plane projected up from the base of the excavation. A maximum deflection of 1-inch has been allowed, provided there are no structures within a 1:1 plane drawn upward from the base of the excavation. If greater deflection occurs during construction, additional bracing may be necessary to minimize settlement of adjacent buildings and utilities in adjacent street and alleys. If desired to reduce the deflection, a greater active pressure could be used in the shoring design.

Pre-Construction Survey

Prior to excavation of the proposed basement levels, it is recommended the surrounding structures and improvements be surveyed to provide a documented record of their condition. It is recommended this include video and/or photographic documentation as well. Such a survey would aid in the resolution of any disputes that may arise concerning damage to adjacent facilities caused by the proposed construction.

Monitoring

Because of the depth of the excavation, some means of monitoring the performance of the shoring system is suggested. The monitoring should consist of periodic surveying of the lateral and vertical locations of the tops of all soldier piles and the lateral movement along the entire lengths of

selected soldier piles. Also, some means of periodically checking the load on selected anchors will be necessary, where applicable.

Some movement of the shored embankments should be anticipated as a result of the relatively deep excavation. It is recommended that photographs of the existing buildings on the adjacent properties be made during construction to record any movements for use in the event of a dispute.

Shoring Observations

It is critical that the installation of shoring is observed by a representative of Geotechnologies, Inc. Many building officials require that shoring installation should be performed during continuous observation of a representative of the geotechnical engineer. The observations insure that the recommendations of the geotechnical report are implemented and so that modifications of the recommendations can be made if variations in the geologic material or groundwater conditions warrant. The observations will allow for a report to be prepared on the installation of shoring for the use of the local building official, where necessary.

SLABS ON GRADE

Concrete Slabs-on Grade

Interior slabs-on-grade and outdoor flatwork should be a minimum of 5 inches in thickness. Interior slabs-on-grade and outdoor flatwork should be cast over undisturbed native soils, or properly controlled fill materials. Due to the high expansion potential of some of the on-site soils, it is recommended that a 4-inch-thick coarse aggregate layer be placed below the interior slabs. Any geologic materials loosened or over-excavated should be wasted from the site or properly compacted to 90 percent of the maximum dry density.

Design of Slabs That Receive Moisture-Sensitive Floor Coverings

Geotechnologies, Inc. does not practice in the field of moisture vapor transmission evaluation and mitigation. Therefore, it is recommended that a qualified consultant be engaged to evaluate the general and specific moisture vapor transmission paths and any impact on the proposed construction. The qualified consultant should provide recommendations for mitigation of potential adverse impacts of moisture vapor transmission on various components of the structure.

Where dampness would be objectionable, it is recommended that the floor slabs should be waterproofed. A qualified waterproofing consultant should be retained in order to recommend a product or method which would provide protection for concrete slabs-on-grade.

All concrete slabs-on-grade should be supported on vapor retarder. The design of the slab and the installation of the vapor retarder should comply with the most recent revisions of ASTM E 1643 and ASTM E 1745. The vapor retarder should comply with ASTM E 1745 Class A requirements.

Where a vapor retarder is used, a low-slump concrete should be used to minimize possible curling of the slabs. The barrier can be covered with a layer of trimmable, compactible, granular fill, where it is thought to be beneficial. See ACI 302.2R-32, Chapter 7 for information on the placement of vapor retarders and the use of a fill layer.

Concrete Crack Control

The recommendations presented in this report are intended to reduce the potential for cracking of concrete slabs-on-grade due to settlement. However even where these recommendations have been implemented, foundations, stucco walls and concrete slabs-on-grade may display some cracking due to minor soil movement and/or concrete shrinkage. The occurrence of concrete cracking may be reduced and/or controlled by limiting the slump of the concrete used, proper concrete placement

and curing, and by placement of crack control joints at reasonable intervals, in particular, where re-entrant slab corners occur.

For standard control of concrete cracking, a maximum crack control joint spacing of 8 feet should not be exceeded. Lesser spacings would provide greater crack control. Joints at curves and angle points are recommended. The crack control joints should be installed as soon as practical following concrete placement. Crack control joints should extend a minimum depth of one-fourth the slab thickness. Construction joints should be designed by a structural engineer.

Complete removal of the existing fill soils beneath outdoor flatwork such as walkways or patio areas, is not required, however, due to the rigid nature of concrete, some cracking, a shorter design life and increased maintenance costs should be anticipated. In order to provide uniform support beneath the flatwork it is recommended that a minimum of 12 inches of the exposed subgrade beneath the flatwork be scarified and recompacted to 90 percent relative compaction.

Slab Reinforcing

Interior concrete slabs-on-grade and outdoor flatwork should be reinforced with a minimum of #4 steel bars on 16-inch centers each way.

PAVEMENTS

Prior to placing paving, the existing grade should be scarified to a depth of 12 inches, moistened or dried to approximately 5 percent over the optimum moisture content, and recompacted to 95 percent relative compaction, as determined by the most recent revision of ASTM D 1557. The client should be aware that removal of all existing fill in the area of new paving is not required, however, pavement constructed in this manner will most likely have a shorter design life and increased maintenance costs. The following pavement sections are recommended:

Service	Asphalt Pavement Thickness Inches	Base Course Inches
Passenger Cars	4	6
Moderate Truck	5	7
Heavy Trucks	6	9

A subgrade modulus of 100 pounds per cubic inch may be assumed for design of concrete paving. Concrete paving for passenger cars and moderate truck traffic shall be a minimum of 6 inches in thickness and shall be underlain by 6 inches of aggregate base. Concrete paving for heavy truck traffic shall be a minimum of 7½ inches in thickness and shall be underlain by 6 inches of aggregate base. Concrete paving should be reinforced with a minimum of #4 steel bars on 16-inch centers each way. For standard crack control maximum expansion joint spacing of 8 feet should not be exceeded. Lesser spacing would provide greater crack control. Joints at curves and angle points are recommended.

Aggregate base should be compacted to a minimum of 95 percent of the most recent revision of ASTM D 1557 laboratory maximum dry density. Base materials should consist of Crushed Aggregate Base which conform with Section 200-2.2 or 200-2.4 of the most recent edition of "Standard Specifications for Public Works Construction", (Green Book).

The performance of pavement is highly dependent upon providing positive surface drainage away from the edges. Ponding of water on or adjacent to pavement can result in saturation of the subgrade materials and subsequent pavement distress. If planter islands are planned, the perimeter curb should extend a minimum of 12 inches below the bottom of the aggregate base.

SITE DRAINAGE

Proper surface drainage is critical to the future performance of the project. Saturation of a soil can cause it to lose internal shear strength and increase its compressibility, resulting in a change in the designed engineering properties. Proper site drainage should be maintained at all times.

All site drainage, with the exception of any required to disposed of onsite by stormwater regulations, should be collected and transferred to the street in non-erosive drainage devices. The proposed structure should be provided with roof drainage. Discharge from downspouts, roof drains and scuppers should not be permitted on unprotected soils within five feet of the building perimeter. Drainage should not be allowed to pond anywhere on the site, and especially not against any foundation or retaining wall. Drainage should not be allowed to flow uncontrolled over any descending slope. Planters which are located within a distance equal to the depth of a retaining wall should be sealed to prevent moisture adversely affecting the wall. Planters which are located within five feet of a foundation should be sealed to prevent moisture affecting the earth materials supporting the foundation.

STORMWATER DISPOSAL

The Proposed System

It is anticipated that a suitable infiltration system would consist of a deep drywell system. The exact location and depth of the potential drywell system has not been discussed. The final location and design of the proposed infiltration system shall be reviewed and approved by this office prior to construction to evaluate whether the intent of the recommendations provided by this firm are satisfied.

Percolation Testing

Percolation testing was conducted in Borings B2, B5 and B6, following the procedure for boring percolation test provided in the Guidelines for Design, Investigation and Reporting Low Impact Development Stormwater Infiltration (GS200.1), dated June 30, 2021, presented in the Administrative Manual for the County of Los Angeles, Department of Public Works, Geotechnical and Material Engineering Division.

At the completion of drilling of these three borings, a 2-inch diameter casing was placed within the center of the boreholes for the purpose of conducting percolation testing. The casing consisted of a slotted PVC pipe within the lower section of the borehole, and solid PVC pipe to the top of the borehole. A sand pack consisting of #3 Monterey Sand was poured into the annular space around the slotted portion of the casing. A 1-foot thick, hydrated bentonite seal was placed over the sand and drill cuttings were placed to the ground surface.

Prior to testing, the boreholes were filled with water for the purpose of pre-soaking for 2 hours. After presoaking, the boreholes were refilled with water, and the rate of drop in the water level was measured. The percolation test readings were recorded a minimum of 8 times or until a stabilized rate of drop was obtained, whichever occurred first.

The table below summarizes the results of the infiltration rates derived from the testing. This rate includes correction factors (RF_t, RF_v, and RF_s), as required by the County of Los Angeles procedure. A factor of safety is not reflected on these rates.

Boring No.	Depth of Boring Below Existing Ground Surface (ft.)	Percolation Testing Conducted Between Depths (ft.)	Infiltration Rate (in./hr.)
B2	80	50 to 80	34.7
B5	80	50 to 80	32.6
B6	80	50 to 80	26.9

At the completion of the percolation testing, the PVC casing was removed from the percolation testing well, and the resulting hole was backfilled with on-site soils to the ground surface.

Stormwater Disposal Recommendations

Based on the results of the exploration, testing and research, it is the finding of this firm that the use of a drywell system for the purpose of stormwater infiltration disposal is feasible from a geotechnical standpoint. The drywell system is not expected to impact the neighboring or proposed developments, provided the advice and recommendations presented herein are implemented during design and construction.

It is the opinion of this firm that the native site soils encountered during the geotechnical explorations are suitable for stormwater infiltration. The previous section of this report presents the anticipated infiltration rates of selected soil layers. It is the recommendation of this firm that the lowest infiltration rate of 26.9 inches per hour may be utilized by the civil engineer for the design of a stormwater infiltration system suitable for the project.

The potential drywell system may be installed inside, or outside the proposed structures. It is recommended that the edge of any potential drywell system maintains a minimum horizontal setback of 10 feet away from the private property lines. Stormwater infiltration shall occur below the primary zone of foundation influence. Based on the anticipated loading distribution of the foundations proposed adjacent to the drywells, it is the determination of this firm that the primary zone of foundation influence extends to a depth of 20 feet below the bottom of the deepest adjacent foundation.

Soils located within the primary zone of foundation influence should not become wet or saturated as a result of the drywells. It is anticipated that a settling chamber will be installed within this primary zone of foundation influence; therefore the seams and bottom of the settling chamber should be adequately sealed to prevent infiltration at this zone. Depending on its final location, the

settling chamber of the drywell may be surcharged by proposed adjacent foundations, in which case the chamber should be designed to withstand this additional surcharge load. The final location of the proposed drywells shall be reviewed and approved by this office prior to construction.

Stormwater infiltration must be conducted a minimum of 10 feet above the groundwater level. At the site, groundwater was not encountered to the maximum excavated depth of 80 feet, which corresponds to elevation 30.2 feet AMSL in Boring B2. Based on this consideration, it is the recommendation of this firm that the proposed drywell system does not extend deeper than elevation 40.2 feet AMSL.

Due to the granular nature of the site soils, caving could potentially occur in the drilled shafts. The use of casing to maintain open shafts for installation of the drywells may be necessary.
It is recommended that the design team, including the structural engineer, waterproofing consultant, plumbing engineer, environmental engineer and landscape architect be consulted in regards to the design and construction of infiltration systems. The design and construction of stormwater infiltration systems is not the responsibility of the geotechnical engineer. However, based on the experience of this firm, it is recommended that several aspects of the use of such facilities should be considered by the design and construction team:

- All infiltration devices should be provided with overflow protection. Once the device is full of water, additional water flowing to the device should be diverted to another acceptable disposal area, or disposed offsite in an acceptable manner.

- All connections associated with stormwater infiltration systems should be sealed and water-tight. Water leaking into the subgrade soils can lead to loss of strength, piping, erosion, settlement and/or expansion of the effected earth materials.

- Excavations proposed for the installation of stormwater systems should comply with the “Temporary Excavations” sections of this geotechnical engineering investigation, as well as CalOSHA Regulations where applicable.

DESIGN REVIEW

Engineering of the proposed project should not begin until approval of the geotechnical report by the Building Official is obtained in writing. Significant changes in the geotechnical recommendations may result during the building department review process.

It is recommended that the geotechnical aspects of the project be reviewed by this firm during the design process. This review provides assistance to the design team by providing specific recommendations for particular cases, as well as review of the proposed construction to evaluate whether the intent of the recommendations presented herein are satisfied.

CONSTRUCTION MONITORING

Geotechnical observations and testing during construction are considered to be a continuation of the geotechnical investigation. It is critical that this firm review the geotechnical aspects of the project during the construction process. Compliance with the design concepts, specifications or recommendations during construction requires review by this firm during the course of construction. All foundations should be observed by a representative of this firm prior to placing concrete or steel. Any fill which is placed should be observed, tested, and verified if used for engineered purposes. Please advise Geotechnologies, Inc. at least twenty-four hours prior to any required site visit.

If conditions encountered during construction appear to differ from those disclosed herein, notify Geotechnologies, Inc. immediately so the need for modifications may be considered in a timely manner.

It is the responsibility of the contractor to ensure that all excavations and trenches are properly sloped or shored. All temporary excavations should be cut and maintained in accordance with applicable OSHA rules and regulations.

EXCAVATION CHARACTERISTICS

The exploration performed for this investigation is limited to the geotechnical excavations described. Direct exploration of the entire site would not be economically feasible. The owner, design team and contractor must understand that differing excavation and drilling conditions may be encountered based on boulders, gravel, oversize materials, groundwater and many other conditions. Fill materials, especially when they were placed without benefit of modern grading codes, regularly contain materials which could impede efficient grading and drilling. Southern California sedimentary bedrock is known to contain variable layers which reflect differences in depositional environment. Such layers may include abundant gravel, cobbles and boulders. Similarly bedrock can contain concretions. Concretions are typically lenticular and follow the bedding. They are formed by mineral deposits. Concretions can be very hard. Excavation and drilling in these areas may require full size equipment and coring capability. The contractor should be familiar with the site and the geologic materials in the vicinity.

CLOSURE AND LIMITATIONS

The purpose of this report is to aid in the design and completion of the described project. Implementation of the advice presented in this report is intended to reduce certain risks associated with construction projects. The professional opinions and geotechnical advice contained in this report are sought because of special skill in engineering and geology and were prepared in accordance with generally accepted geotechnical engineering practice. Geotechnologies, Inc. has a duty to exercise the ordinary skill and competence of members of the engineering profession. Those who hire Geotechnologies, Inc. are not justified in expecting infallibility, but can expect reasonable professional care and competence.

The recommendations of this report pertain only to the site investigated and are based upon the assumption that the geologic conditions do not deviate from those disclosed in the investigation. If any variations are encountered during construction, or if the proposed construction will differ from that anticipated herein, Geotechnologies, Inc. should be notified so that supplemental recommendations can be prepared.

This report is issued with the understanding that it is the responsibility of the owner, or the owner's representatives, to ensure that the information and recommendations contained herein are brought to the attention of the project architect and engineer and are incorporated into the plans. The owner is also responsible to see that the contractor and subcontractors carry out the geotechnical recommendations during construction.

The findings of this report are valid as of the date of this report. However, changes in the conditions of a property can occur with the passage of time, whether they are due to natural processes or the works of man on this or adjacent properties. In addition, changes in applicable or appropriate standards may occur, whether they result from legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated wholly or partially by changes outside control of this firm. Therefore, this report is subject to review and should not be relied upon after a period of three years.

Geotechnical observations and testing during construction is considered to be a continuation of the geotechnical investigation. It is, therefore, most prudent to employ the consultant performing the initial investigative work to provide observation and testing services during construction. This practice enables the project to flow smoothly from the planning stages through to completion.

Should another geotechnical firm be selected to provide the testing and observation services during construction, that firm should prepare a letter indicating their assumption of the responsibilities of geotechnical engineer of record. A copy of the letter should be provided to the regulatory agency

for review. The letter should acknowledge the concurrence of the new geotechnical engineer with the recommendations presented in this report.

EXCLUSIONS

Geotechnologies, Inc. does not practice in the fields of methane gas, radon gas, environmental engineering, waterproofing, dewatering organic substances or the presence of corrosive soils or wetlands which could affect the proposed development including mold and toxic mold. Nothing in this report is intended to address these issues and/or their potential effect on the proposed development. A competent professional consultant should be retained in order to address environmental issues, waterproofing, organic substances and wetlands which might affect the proposed development.

GEOTECHNICAL TESTING

Classification and Sampling

The soil is continuously logged by a representative of this firm and classified by visual examination in accordance with the Unified Soil Classification system. The field classification is verified in the laboratory, also in accordance with the Unified Soil Classification System. Laboratory classification may include visual examination, Atterberg Limit Tests and grain size distribution. The final classification is shown on the excavation logs.

Samples of the geologic materials encountered in the exploratory excavations were collected and transported to the laboratory. Undisturbed samples of soil are obtained at frequent intervals. Unless noted on the excavation logs as an SPT sample, samples acquired while utilizing a hollow-stem auger drill rig are obtained by driving a thin-walled, California Modified Sampler with successive 30-inch drops of a 140-pound hammer. The soil is retained in brass rings of 2.50 inches outside diameter and 1.00 inch in height. The central portion of the samples are stored in close fitting,

waterproof containers for transportation to the laboratory. Samples noted on the excavation logs as SPT samples are obtained in general accordance with the most recent revision of ASTM D 1586. Samples are retained for 30 days after the date of the geotechnical report.

Moisture and Density Relationships

The field moisture content and dry unit weight are determined for each of the undisturbed soil samples, and the moisture content is determined for SPT samples in general accordance with the most recent revision of ASTM D 4959 or ASTM D 4643. This information is useful in providing a gross picture of the soil consistency between exploration locations and any local variations. The dry unit weight is determined in pounds per cubic foot and shown on the “Excavation Logs”, A-Plates. The field moisture content is determined as a percentage of the dry unit weight.

Direct Shear Testing

Shear tests are performed in general accordance with the most recent revision of ASTM D 3080 with a strain controlled, direct shear machine manufactured by Soil Test, Inc. or a Direct Shear Apparatus manufactured by GeoMatic, Inc. The rate of deformation is approximately 0.025 inches per minute. Each sample is sheared under varying confining pressures in order to determine the Mohr-Coulomb shear strength parameters of the cohesion intercept and the angle of internal friction. Samples are generally tested in an artificially saturated condition. Depending upon the sample location and future site conditions, samples may be tested at field moisture content. The results are plotted on the "Shear Test Diagram," B-Plates.

The most recent revision of ASTM 3080 limits the particle size to 10 percent of the diameter of the direct shear test specimen. The sheared sample is inspected by the laboratory technician running the test. The inspection is performed by splitting the sample along the sheared plane and

observing the soils exposed on both sides. Where oversize particles are observed in the shear plane, the results are discarded, and the test run again with a fresh sample.

Consolidation Testing

Settlement predictions of the soil's behavior under load are made on the basis of the consolidation tests in general accordance with the most recent revision of ASTM D 2435. The consolidation apparatus is designed to receive a single one-inch high ring. Loads are applied in several increments in a geometric progression, and the resulting deformations are recorded at selected time intervals. Porous stones are placed in contact with the top and bottom of each specimen to permit addition and release of pore fluid. Samples are generally tested at increased moisture content to determine the effects of water on the bearing soil. The normal pressure at which the water is added is noted on the drawing. Results are plotted on the "Consolidation Test," C-Plates.

Expansion Index Testing

The expansion tests performed on the remolded samples are in accordance with the Expansion Index testing procedures, as described in the most recent revision of ASTM D 4829. The soil sample is compacted into a metal ring at a saturation degree of 50 percent. The ring sample is then placed in a consolidometer, under a vertical confining pressure of 1 lbf/square inch and inundated with distilled water. The deformation of the specimen is recorded for a period of 24 hour or until the rate of deformation becomes less than 0.0002 inches/hour, whichever occurs first. The expansion index, EI, is determined by dividing the difference between final and initial height of the ring sample by the initial height and multiplied by 1,000. Results are presented in Plate D of this report.

Laboratory Compaction Characteristics

The maximum dry unit weight and optimum moisture content of a soil are determined in general accordance with the most recent revision of ASTM D 1557. A soil at a selected moisture content is placed in five layers into a mold of given dimensions, with each layer compacted by 25 blows of a 10-pound hammer dropped from a distance of 18 inches subjecting the soil to a total compactive effort of about 56,000 pounds per cubic foot. The resulting dry unit weight is determined. The procedure is repeated for a sufficient number of moisture contents to establish a relationship between the dry unit weight and the water content of the soil. The data when plotted represent a curvilinear relationship known as the compaction curve. The values of optimum moisture content and modified maximum dry unit weight are determined from the compaction curve. Results are presented in Plate D of this report.

Grain Size Distribution

Sieve analysis, ASTM D6913, is used to determine the grain size distribution of the soil larger than the Number 200 sieve. The grain size distributions are plotted on the E-Plates presented in the Appendix of this report.

Atterberg Limits

Depending on their moisture content, cohesive soils can be solid, plastic, or liquid. The water contents corresponding to the transitions from solid to plastic or plastic to liquid are known as the Atterberg Limits. The transitions are called the plastic limit and liquid limit. The difference between the liquid and plastic limits is known as the plasticity index. ASTM D 4318 is utilized to determine the Atterberg Limits. The results are shown on the enclosed F-Plate.

Description: Liquefaction Analysis
Boring No: B2

LIQUEFACTION EVALUATION (Idriss & Boulanger, EERI NO 12)

EARTHQUAKE INFORMATION:

Earthquake Magnitude (M):	6.7
Peak Ground Horizontal Acceleration, PGA (g):	0.90
Calculated Mag.Wtg.Factor:	1.234

GROUNDWATER INFORMATION:

Current Groundwater Level (ft):	81.0
Historically Highest Groundwater Level* (ft):	40.0
Unit Weight of Water (pcf):	62.4

* Based on California Geological Survey Seismic Hazard Evaluation Report

BOREHOLE AND SAMPLER INFORMATION:

Borehole Diameter (inches):	4.3
SPT Sampler with room for Liner (Y/N):	Y

LIQUEFACTION BOUNDARY:

Plastic Index Cut Off (PI):	18
Minimum Liquefaction FS:	1.3

Depth to Base Layer (feet)	Total Unit Weight (pcf)	Current Water Level (feet)	Historical Water Level (feet)	Field SPT Blowcount N	Depth of SPT Blowcount (feet)	Fines Content #200 Sieve (%)	Plastic Index (PI)	Vetical Stress σ_{vc}, (psf)	Effective Vert. OUR COMMITMENT TO SUSTAINABILITY | ESA helps a variety of public and private sector clients plan and prepare for climate change and emerging regulations that limit GHG emissions. ESA is a registered assessor with the California Climate Action Registry, a Climate Leader, and founding reporter for the Climate Registry. ESA is also a corporate member of the U.S. Green Building Council and the Business Council on Climate Change (BC3). Internally, ESA has adopted a Sustainability Vision and Policy Statement and a plan to reduce waste and energy within our operations. This document was produced using recycled paper.

EXECUTIVE SUMMARY

B9 Sequoia Culver City Owner LP, the Applicant, proposes to develop a mixed-use residential and commercial project (Project) on an approximately 8.34-acre site (Project Site) located at 5800 Hannum Avenue, 6031 Uplander Way, 5821 Uplander Way, and 5835 Sumner Way, Bldg E, within the Fox Hills neighborhood of the City of Culver City (City). **Environmental Science Associates (ESA)** has prepared a paleontological resources assessment to identify potential impacts from the Project to paleontological resources in accordance with the California Environmental Quality Act (CEQA). The scope of work for this assessment included a geologic map and literature review, review of a site-specific geotechnical report prepared for the Project, a paleontological resources records search through the Natural History Museum of Los Angeles County (NHMLAC), and the recommendation of mitigation measures to reduce impacts from the Project to paleontological resources to a less than significant level. The City is the lead agency for the Project pursuant to CEQA.

Geologic mapping indicates that the surface of the Project Site is underlain by Pleistocene-aged alluvium (Qoa) and the Paleosol of Baldwin Hills (Qop). The Pleistocene alluvium has a high sensitivity for paleontological resources. The Paleosol of the Baldwin Hills also has a high sensitivity because the Society of Vertebrate Paleontology (SVP) guidelines (SVP, 2010) specifically call out paleosols as sensitive, although there is no record of paleontologists testing the Paleosol for the presence of fossils.

Moreover, the paleontological records search conducted through the NHMLAC indicates that no known fossil localities have been identified within the Project Site, but many known fossil localities exist nearby from the same sedimentary deposits that occur in the Project Site, and have been recovered at unknown depths and depths up to 16 feet below ground surface (bgs).

Given the identification of numerous fossil specimens at depth during construction projects in the immediate vicinity, the positive results of NHMLAC records search, and since excavations for the Project would extend to a maximum depth of 25 feet bgs (although building footings could extend to approximately 28 feet bgs), the potential to encounter buried paleontological resources during construction of the Project is considered high. Therefore, as the Project could directly or indirectly destroy unique paleontological resources, impacts on buried paleontological resources are considered potentially significant. As such, recommended mitigation measures, including retention of a Qualified Paleontologist, paleontological resources monitoring, and procedures to be followed in the event of the discovery of paleontological resources, are provided in the *Summary of Findings and Recommended Mitigation Measures* section of this report in order to reduce impacts to paleontological resources to a less than significant level under CEQA.

5757 UPLANDER WAY

Paleontological Resources Assessment Report

Introduction

B9 Sequoia Culver City Owner LP, the Applicant, proposes to develop a mixed-use residential and commercial project (Project) on an approximately 8.34-acre site (Project Site) located at 5800 Hannum Avenue, 6031 Uplander Way, 5821 Uplander Way, and 5835 Sumner Way, Bldg E, within the Fox Hills neighborhood of the City of Culver City (City). **Environmental Science Associates (ESA)** has prepared a paleontological resources assessment to identify potential impacts to paleontological resources in accordance with the California Environmental Quality Act (CEQA). The scope of work for this assessment included a geologic map and literature review, review of a site-specific geotechnical report prepared for the Project, a paleontological resources records search through the Natural History Museum of Los Angeles County (NHMLAC), and the recommendation of mitigation measures to prevent potential impacts from the Project to significant paleontological resources, should they be encountered. The City is the lead agency for the Project pursuant to CEQA.

ESA personnel involved in the preparation of this report are as follows: Fatima Clark, B.A., Project Manager and report author; J.D. Stewart, Ph.D., Principal Investigator and report author; Kyle Garcia, M.A. RPA, Senior Reviewer; and Chance Scott, GIS specialist. Resumes of key personnel are included in **Appendix A** of this report.

Project Location

As mentioned above, the Project Site is located at 5800 Hannum Avenue, 6031 Uplander Way, 5821 Uplander Way, and 5835 Sumner Way, Bldg E, within the City's limits (**Figure 1**). The Project Site is bounded by Hannum Avenue to the north, Uplander Way to the east and south, and Bristol Parkway to the west (**Figure 2**). It is also situated within Section 19 of Township 2 South, Range 14 West on the Venice, California U.S. Geological Survey (USGS) 7.5-minute topographic quadrangle (**Figure 3**).

Project Description

The Project would demolish the existing surface parking, landscaping and four, one- to two-story office buildings and construct three new seven-story mid-rise buildings with a maximum height of 88 feet and six inches. The Project would provide private and common open space for residents. Each of the three buildings would have its own dedicated parking areas that would be located within a combination of subterranean (up to two levels) and podium parking levels. The Project would include a total of 1,304 vehicular parking spaces (1,283 residential and 21 commercial). Four points of vehicular access would be provided to the Project Site, including three driveways along Uplander Way (two on the east and one on the south) and a driveway connecting to Bristol Parkway. The maximum depth of ground disturbance would reach depths of up to 25 feet below ground surface (bgs), although building footings could extend to approximately 28 feet bgs.

Regulatory Framework

Paleontological resources are limited, nonrenewable resources of scientific, cultural, and educational value that are afforded protection under state laws and regulations. The following section summarizes the applicable state laws and regulations, as well as professional standards.

State

California Environmental Quality Act

The CEQA Guidelines (California Code of Regulations Title 14, Chapter 3, Section 15000 et seq.), define the procedures, types of activities, individuals, and public agencies required to comply with CEQA. As part of CEQA's Initial Study process, one of the questions that must be answered by the lead agency relates to paleontological resources: "Will the proposed project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?" (CEQA Guidelines Appendix G, Section VII, Part f).

The loss of a significant paleontological resource, which includes any identifiable fossil that is unique, unusual, rare, uncommon, diagnostically, or stratigraphically important, and/or those that add to an existing body of knowledge in specific areas—stratigraphically, taxonomically, and/or regionally—would be a significant environmental impact. Direct impacts to paleontological resources primarily concern the potential destruction of nonrenewable paleontological resources and the loss of information associated with these resources. This includes the unauthorized collection of fossil remains. If potentially fossiliferous bedrock or surficial sediments are disturbed, the disturbance could result in the destruction of paleontological resources and subsequent loss of information.

The CEQA threshold of significance for a significant impact to paleontological resources is reached when a project is determined to "directly or indirectly destroy a significant paleontological resource or unique geologic feature" (CEQA Guidelines Appendix G, Section VII, Part f). In general, for project sites that are underlain by paleontologically sensitive geologic units, the greater the amount of ground disturbance, the higher the potential for significant impacts to paleontological resources.

California Penal Code Section 622.5

Under California Penal Code Section 622.5, "[e]very person, not the owner thereof, who willfully injures, disfigures, defaces, or destroys any object or thing of archeological or historical interest or value, whether situated on private lands or within any public park or place, is guilty of a misdemeanor."

California PRC Section 5097.5

California Public Resources Code (PRC) Section 5097.5 provides protection for paleontological resources on public lands, where Section 5097.5(a) states, in part, that:

> *No person shall knowingly and willfully excavate upon, or remove, destroy, injure, or deface, any historic or prehistoric ruins, burial grounds, paleontological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, rock art, or any other paleontological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over the lands.*

Local

City of Culver City General Plan

The City's General Plan 2045 has one goal (Goal C-1) for cultural resources (including paleontological resources), which indicates that "cultural resources are protected and enhanced through proactive measures" (City of Culver City, 2024:248). Measures C-1.15 and C-1.21 provided below are focused on the protection of paleontological resources.

> **C-1.15: Public knowledge promotion.** Promote public knowledge and understanding of cultural resources (including archaeological, tribal cultural resources, historic resources, and paleontological resources) present within the city.
>
> **C-1.21: Protect Archaeological, Paleontological, and Tribal Cultural Resources.** Promote programs and policies to protect known archaeological and paleontological sites and Tribal Cultural Resources.

The City's General Plan also includes the following implementation actions for the preservation of paleontological resources.

> **IA.C-8: Historic discretionary review.** Require that projects subject to discretionary review are screened to Cultural Affairs to determine if further evaluation by cultural affairs is warranted and, if so, require that projects undergo historic, archaeological, and paleontological assessments and are documented in technical studies by qualified experts to identify the potential for resources to be negatively affected during project implementation and to ensure steps are taken, where warranted, to protect resources.
>
> **IA.C-10: Standard conditions of development approval.** Continue to implement standard conditions of approval that require and specify the steps to be taken to avoid damage and promote preservation if unknown archaeological or paleontological resources, or Tribal Cultural Resources are uncovered during construction.

Society for Vertebrate Paleontology Standard Guidelines

The Society of Vertebrate Paleontology (SVP) Guidelines (SVP, 2010) outline professional protocols and practices for conducting paleontological resource assessments and surveys, monitoring and mitigation, data and fossil recovery, sampling procedures, specimen preparation, identification, analysis, and curation. Most practicing professional vertebrate paleontologists adhere closely to the SVP's assessment, mitigation, and monitoring requirements as specifically provided in its standard guidelines. Most state and local regulatory agencies accept and use the professional standards set forth by the SVP.

Paleontological Resources Significance Criteria

As defined by the SVP (2010:11), significant nonrenewable paleontological resources are:

> *Fossils and fossiliferous deposits, here defined as consisting of identifiable vertebrate fossils, large or small, uncommon invertebrate, plant, and trace fossils, and other data that provide taphonomic, taxonomic, phylogenetic, paleoecologic, stratigraphic, and/or biochronologic information. Paleontological resources are considered to be older than recorded human history and/or older than middle Holocene (i.e., older than about 5,000 radiocarbon years).*

Multiple paleontological studies have additional criteria for the assessment of significance for fossil discoveries (e.g., Murphey et al., 2019; Murphey and Daitch, 2007; Scott and Springer, 2003). In general, these studies assess fossils as significant if one or more of the following criteria apply:

1. The fossils provide information on the evolutionary relationships and developmental trends among organisms, living or extinct.
2. The fossils provide data useful in determining the age(s) of the rock unit or sedimentary stratum, including data important in determining the depositional history of the region and the timing of geologic events therein.
3. The fossils provide data regarding the development of biological communities or interaction between paleobotanical and paleozoological biotas.
4. The fossils demonstrate unusual or spectacular circumstances in the history of life.
5. The fossils are in short supply and/or in danger of being depleted or destroyed by the elements, vandalism, or commercial exploitation, and are not found in other geographic locations.

In summary, significant paleontological resources are determined to be fossils or assemblages of fossils that are unique, unusual, rare, uncommon, or diagnostically important (Murphey et al., 2019; Murphey and Daitch, 2007; Scott and Springer, 2003). Any identifiable vertebrate fossil is significant (SVP, 2010). Significant fossils can include remains of large to very small aquatic and terrestrial vertebrates or remains of plants and animals previously not represented in certain portions of the stratigraphy. Assemblages of fossils that might aid stratigraphic correlation, particularly those offering data for the interpretation of tectonic events, geomorphologic evolution, and paleoclimatology are also critically important (Scott and Springer, 2003; Scott et al., 2004).

Paleontological Potential

Paleontological potential is defined as the potential for a geologic unit to produce scientifically significant fossils. This is determined by rock type, the past history of the geologic unit in producing significant fossils, and the fossil localities recorded from that unit. Paleontological potential is derived from the known fossil data collected from the entire geologic unit and not just from one specific survey. In its "Standard Procedures for the Assessment and Mitigation of Adverse Impacts to Paleontological Resources," the SVP (2010) defines four categories of paleontological sensitivity (potential) for rock units: high, low, undetermined, and no potential.

- **High Potential.** Rock units from which vertebrate or significant invertebrate, plant, or trace fossils have been recovered are considered to have a high potential for containing additional significant paleontological resources. Rocks units classified as having high potential for producing paleontological resources include, but are not limited to, sedimentary formations and some volcaniclastic formations (e. g., ashes or tephras), and some low-grade metamorphic rocks which contain significant paleontological resources anywhere within their geographical extent, and sedimentary rock units temporally or lithologically suitable for the preservation of fossils (e. g., middle Holocene and older, fine-grained fluvial sandstones, argillaceous and carbonate-rich paleosols, cross-bedded point bar sandstones, fine-grained marine sandstones, etc.).

- **Low Potential.** Reports in the paleontological literature or field surveys by a qualified professional paleontologist may allow determination that some rock units have low potential for yielding significant fossils. Such rock units will be poorly represented by fossil specimens in institutional collections, or based on general scientific consensus only preserve fossils in rare circumstances and the presence of fossils is the exception not the rule, e. g. basalt flows or Recent colluvium. Rock units with low potential typically will not require impact mitigation measures to protect fossils.
- **Undetermined Potential.** Rock units for which little information is available concerning their paleontological content, geologic age, and depositional environment are considered to have undetermined potential. Further study is necessary to determine if these rock units have high or low potential to contain significant paleontological resources. A field survey by a qualified professional paleontologist to specifically determine the paleontological resource potential of these rock units is required before a paleontological resource impact mitigation program can be developed. In cases where no subsurface data are available, paleontological potential can sometimes be determined by strategically located excavations into subsurface stratigraphy.
- **No Potential.** Some rock units have no potential to contain significant paleontological resources, for instance high-grade metamorphic rocks (such as gneisses and schists) and plutonic igneous rocks (such as granites and diorites). Rock units with no potential require no protection nor impact mitigation measures relative to paleontological resources.

For geologic units with high potential, full-time monitoring is generally recommended during any project-related ground disturbance. For geologic units with low potential, monitoring will not generally be required. For geologic units with undetermined potential, field surveys by a qualified vertebrate paleontologist should be conducted to specifically determine the paleontological potential of the rock units present within the study area.

Geologic Setting

The Project Site is situated in the northern portion of the Los Angeles Basin (Basin), a structural depression approximately 50 miles long and 20 miles wide (Yerkes et al., 1965; Ingersoll and Rumelhart, 1999). The Basin is within the Transverse Ranges physiographic-structural province, a series of east-west trending mountains and valleys that interrupt the northwest-southeast orientation of other major California ranges, including the Peninsular Ranges, Coast Ranges, and the Sierra Nevada. The Basin is bounded on the north by the Santa Monica Mountains, the Elysian, Repetto, and Puente Hills and on the east, and by the Santa Ana Mountains and San Joaquin Hills to the southeast. The Basin formed between 18 and 3 million years ago as a result of tectonic subsidence (Critelli et al., 1995). Continuous sedimentation into the Basin began during the middle Miocene around 13 million years ago, as thousands of feet of sediments were deposited in a marine environment (Yerkes et al., 1965). The deposition of terrestrial alluvial sediments commenced during the Pleistocene Epoch. More specifically, the Project Site is situated on the southwest edge of the Baldwin Hills.

Geologic Map and Literature Review

Review of the Dibblee and Minch (2007) geologic map of the Venice and Inglewood quadrangles indicates that the Project Site is underlain by older alluvium (Qoa) along the northwest portion and Paleosol in Baldwin Hills (Qop) in the northeastern, central, and southern portions of the Project Site

(Figure 4). Qoa is described as "[o]lder alluvium of gray to light brown pebble-gravel, sand, and silt-clay, elevated and dissected; in Baldwin Hills designated as Baldwin Hills sandy gravel" (Dibblee and Minch, 2007). Qop overlies the Qoa and is described as the "[p]aleosol in Baldwin Hills… [and consisting of a] "gray to rusty brown, sandy, locally pebbly, moderately indurated "hard pan" on Qoa" (Dibblee and Minch, 2007). The first mention of the Paleosol was by Weber et al. (1982) who named it the Fox Hills relict paleosol. No exposures of marine sediments are mapped in the immediate area of the Project, but the San Pedro Sand (Qsp) is mapped a few blocks northwest of the Project.

Bandy and Marinkovich (1973) documented marine deposits in the Baldwin Hills dated at 36,200 ±2,750 radiocarbon years and 28,450 ±2,600 radiocarbon years. Thus, uplift of the Baldwin Hills postdates those dates. It is probable that the Qoa and Qop units postdate the 28,000-year date.

Pebbles of the Santa Monica Schist are common in the Pleistocene sediments found in portions of Culver City. It is probable that these pebbles of the Santa Monica Schist could also be encountered during excavations, because the Baldwin Hills were submerged prior to their late Pleistocene uplift.

Neither of the collections of California Pleistocene non-marine vertebrate fossil localities (Jefferson, 1991a, 1991b) have any entries in the Baldwin Hills area. Per review of the NHMLAC's records, there are many known vertebrate fossil localities, but all those are located in the low lying areas of Culver City. It is thus possible that Pleistocene terrestrial vertebrate fossils could be unearthed in the Baldwin Hills and these could be potentially discovered during screening of sediment samples.

There is a growing list of Pleistocene paleosols that have produced vertebrate fossils in southern California. Many of these paleosols have been found in desert settings (Stewart et al., 2012; Raum et al., 2014; Stewart and Hakel, 2016; Stewart and Hakel 2017; Stewart and Hakel, 2019), while others have been found in a coastal setting (Stewart, 2018; 2024). There is no record of paleontologists testing the paleosol in the Baldwin Hills area for fossils. If exposures of the paleosols are found in this Project, a test for fossils would be possible. Furthermore, if pedogenic calcium carbonate is present, a radiocarbon dating would also be possible.

Review of Geotechnical Report

ESA reviewed the geotechnical report prepared for the Project by Geotechnologies, Inc. (2024). Review of the geotechnical report indicates that a total of seven borings were drilled at the Project Site to depths ranging between 40 and 80 feet bgs. Fill materials were encountered in all borings ranging in depth between 2 and 5 feet bgs. Native materials were found beneath the fill materials. The native materials are characterized as the following:

> *…interlayered granular (sandy) soil layers, and fine soil layers. The granular soil layers are composed of sand, silty sand and clayey sand, while the fine layers are composed of sandy to silty clay and sandy to clayey silt. The observed native soils are slightly moist to moist, range from yellowish brown to orange brown to dark brown to gray in color, and are medium dense to very dense, stiff to very stiff, and fine to coarse grained, with occasional gravel."* (Geotechnologies, Inc., 2024:4).

No attempt was made to distinguish terrestrial sediments from marine sediments in the geotechnical report. Pleistocene marine sediments would logically be encountered at some undetermined depth.

Natural History Museum of Los Angeles County Records Search

In addition to the literature search, ESA requested a database search on December 24, 2024, from the NHMLAC for records of fossil localities in and around the Project Site. The purpose of the museum records search was to: (1) determine whether any previously recorded fossil localities occur in the Project Site, (2) assess the potential for disturbance of these localities during construction, and (3) evaluate the paleontological sensitivity within the Project Site and vicinity. The results from the NHMLAC were received on December 30, 2024 and provided in **Appendix B** of this report.

The results indicate that no known fossil localities are located within the Project Site, but that fossil localities have been identified nearby from the same sedimentary deposits that occur in the Project Site, either at surface or at depth (**Table 1**). Fossil localities (including horse, camel, mammoth, bison, hares, antelope, birds, ground sloth, mastodon, saber-toothed cat, deer, bivalves, bony fish, sponges, snails, scallops, shellfish and other invertebrates) have been recovered in the vicinity of the Project Site. These localities were found at unknown depths and depths between 1.6 and 16 feet bgs. Localities LACM VP 1180 and 4942 also produced cf. *Mammut,* and *Equus* (Jefferson, 1991b). These are not mentioned in the records search report from the NHMLAC. The only fossil localities listed in Table 1that are within Baldwin Hills area are the marine fossil localities. Specifically, marine mollusks were recovered at localities (LACM IP 42394 – 42408) only a few hundred feet northwest of the Project (Bell, 2024).

TABLE 1
SUMMARY OF NHMLAC FOSSIL LOCALITIES

Locality Number	Formation	Taxa	Depth
LACM IP 42394 - 42408	Pleistocene terrace deposits	Sponge trace (Entobia), oysters (Ostrea), scallops (Leptopecten, Chlamys), and other unsorted invertebrates	1.6 – 9.8 ft bgs (50 cm- 3m)
LACM IP 23224	Unknown formation (Pleistocene)	Cerith (Lirobittium), dove snail (Amphissa), nutclam (Acila [Truncacila]), wentletrap (Hirtoscala), bivalve (Saccella), slipper shell (Crepidula), top snail (Calliostoma, Norrisia), scallop (Leptopecten), jewel boxes (Chama), horn snail (Bittium), cardita (Cyclocardia), hatchet shell (Thyasira), venus clam (Compsomyax), tower shell (Turritella), nut clam (Nuculana)	Unknown
LACM VP 1180, 4942	Unknown formation (Pleistocene, massive sandy mudstone w scattered pieces of gravel)	Mammoth (Mammuthus); bison (Bison); hare (Lepus)	16 ft bgs
LACM VP 3789	Unknown (Pleistocene; pebbly gray-green to brown mud that directly overlies a gray-green fine sand)	Mammoth (Mammuthus)	14 ft bgs
LACM VP 1170	Unknown formation (Pleistocene)	Sloth (Megalonyx), camel (Camelops), weasel (Mustela frenata), bison (Bison), deer (Odocoileus), sabertooth cat (Smilodon), pronghorn antelope (Capromeryx), Mastodon (Mammut), peccary (Platygonus), horse (Equus), coot (Fulica), unidentified birds (Aves)	Unknown

Paleontological Sensitivity Analysis

The literature and geologic mapping review and the records search results presented above were used to assign paleontological sensitivity to the geologic units at surface and underlying the Project Site, following the guidelines of the SVP (2010):

- **Fill Material:** As indicated by geotechnical testing (Geotechnologies, Inc., 2024), fill material is present at the surface of the Project Site and extends to depths between 2 and 5 feet. It is unclear as to where the fill material came from and so assigning an age is not possible. Given that the fill is described as artificial and is likely the result of past grading or construction activities at the Project Site, it is unlikely to contain intact fossiliferous deposits. Therefore, this unit is assigned **No Potential** to contain significant paleontological resources.
- **Qop, Paleosol of Baldwin Hills:** This unit is described as gray to rusty brown, sandy, locally pebbly, moderately indurated "hardpan" on **Qoa.** This unit is assigned a **High Potential** to contain paleontological resources because the SVP guidelines (SVP, 2010) specifically call out paleosols as sensitive. There is no record of paleontologists testing the Paleosol in the Baldwin Hills for fossils.
- **Qoa, Older alluvium:** Dibblee and Minch (2007) describe this unit as "Older alluvium of gray to light brown pebble-gravel, sand, and silt-clay, elevated and dissected; in Baldwin Hills designated as Baldwin Hills sandy gravel by Weber et al., 1982." Many significant fossils have been recovered from Older alluvium in Culver City. Therefore, it is assigned a **High Potential** for significant paleontological resources.
- **Pleistocene marine sediments:** These are not mapped in this area but clearly exist subsurface. The Dibblee and Minch (2007) map an outcrop of the San Pedro Formation a few blocks northwest of the Project. Many Pleistocene marine fossils were excavated a few hundred feet northwest of the Project. Microvertebrate fossils often occur in such deposits. Therefore, these sediments are assigned a **High Potential** for significant paleontological resources.

Summary of Findings and Recommendations

Geologic mapping indicates that the surface of the Project Site is underlain by 2-5 feet of fill material, which has no potential for paleontological resources. Possibly beneath that is Paleosol of Baldwin Hills (Qop) which has a high potential to retain paleontological resources. The remainder of the sediments that are anticipated to be encountered are older alluvium (Qoa) which has a high potential for paleontological resources. The Qop and Qoa units will be monitored for paleontological resources since excavations for the Project are expected to extend to a maximum depth of 25 feet bgs, although building footings could extend to approximately 28 feet bgs. Therefore, as the Project could directly or indirectly destroy unique paleontological resources, impacts on buried paleontological resources are considered potentially significant. As such, the following recommendations are provided below in order to reduce impacts to paleontological resources to a less than significant level under CEQA.

1. Prior to the issuance of demolition and grading permits, the Applicant shall retain a Qualified Paleontologist meeting the Society of Vertebrate Paleontology (SVP) standards for a professional paleontologist. The Qualified Paleontologist shall provide technical and compliance oversight of all

work as it relates to paleontological resources. The Qualified Paleontologist shall examine construction plans and oversee the preparation of a Paleontological Resources Impact Mitigation Plan (Plan). This Plan shall include geological and paleontological contextual information, methods for paleontological construction monitoring, protocols for inadvertent discoveries, methods for sediment sampling and screening, including requirements for the radiocarbon dating of specimens or other materials, and final reporting requirements. The Qualified Paleontologist or his or her designee shall attend a pre-construction meeting to discuss the monitoring requirements to construction personnel and shall be responsible for overseeing paleontological monitors (meeting SVP standards) that will observe grading and excavation activities.

2. Paleontological monitoring shall be conducted during construction excavations into undisturbed older alluvial sediments, undisturbed Baldwin Hills Paleosol materials, and undisturbed Pleistocene marine sediments. Monitoring shall consist of visually inspecting fresh exposures of rock for larger fossil remains and, where appropriate, collecting and wet screening sediment samples of promising horizons for smaller fossil remains. The Qualified Paleontologist or his or her designee will regularly inspect the concentrate samples via a microscope or other appropriate means. If significant vertebrate fossils are found, the Qualified Paleontologist or his or her designee will collect and process additional larger samples for screening, per Society of Vertebrate Paleontology guidelines from each geologic unit producing significant fossils. The Qualified Paleontologist shall determine the frequency of monitoring inspections and shall be based on the rate of excavation and grading activities, the materials being excavated, and the depth of excavation, and/or if found, the abundance and type of fossils encountered. Full-time monitoring can be reduced to part-time inspections, or ceased entirely, if determined adequate by the Qualified Paleontologist. If a potential fossil is found, the Qualified Paleontologist shall have authority to temporarily stop excavation activity or to temporarily divert or redirect grading and excavation activities in the area of the exposed fossil to facilitate evaluation of the discovery. The Qualified Paleontologist or his or her designee shall establish an appropriate buffer area around the find where construction activities shall not be allowed to continue. Work shall be allowed to continue outside of the buffer area. At the Qualified Paleontologist's discretion, and to reduce any construction delay, the grading and excavation contractor shall assist in removing rock/sediment samples for initial processing and evaluation. If preservation in place is not feasible, the Qualified Paleontologist shall implement a paleontological salvage program to remove the resources from their location.

3. Any fossils recovered during Project-related excavations shall be prepared to the point of identification if possible. The residue from sediment samples shall be dried and sorted with a binocular dissecting microscope or other appropriate means. Both macrofossils and vertebrate microfossils shall be prepared to the point of identification if possible, identified, and curated into an accredited repository. The Qualified Paleontologist shall oversee the preparation of a final report summarizing the results of the monitoring and salvaging efforts, the methodology used in these efforts, as well as a description of the fossils collected and their significance. The report shall accompany any specimens to the accredited repository. The report shall also be submitted by the Applicant to the City of Culver City to signify the satisfactory completion of the Project and required mitigation measures.

40 YEARS' EXPERIENCE

CERTIFICATIONS/ REGISTRATION

Meets Society of Vertebrate Paleontology definition of qualified professional paleontologist

Orange County Certified Paleontologist

PROFESSIONAL AFFILIATIONS

Society of Vertebrate Paleontology

Research Associate, Natural History Museum of Los Angeles County

Dr. J.D. Stewart has more than 40 years' experience in the field of paleontology, with 30 years' experience in California. He has authored or co-authored 40 peer-reviewed articles for scientific journals and books. Within these, he has authored or co-authored descriptions of three new genera and three new species.

He is a recognized authority on fossil fishes of Cretaceous rocks of North America and Cenozoic rocks of the western coast of North America. As a result, Dr. Stewart is often called upon to identify paleontological and archaeological specimens. He has served as expert witness for the U.S. Department of Justice.

Dr. Stewart has extensive experience finding and excavating fossils for county, state, and provincial institutions. His field work includes projects in cooperation with the U.S. Bureau of Land Management, National Parks Service, U.S. Army Corps of Engineers, U.S. Navy, U. S. Department of Energy, Federal Aviation Administration, California Energy Commission, Caltrans, and California State Parks. The Bureau of Land Management's national website features one of his excavations from 2004. He has supervised monitoring of construction activity in numerous California counties and municipalities. In addition to fieldwork, he has experience in the supervision of preparators, surveyors, curatorial assistants, and excavators. He also has extensive experience preparing fossils, and has processed, recovered, and identified thousands of microvertebrate fossils.

Relevant Experience

Salton Sea Mitigation Implementation Plan, Riverside and Imperial Counties, CA. *Paleontologist.* ESA prepared an adaptive management and monitoring plan for the Salton Sea basin for the Salton Sea Management Program, which is a partnership between the California Natural Resources Agency, DWR, and CDFW. The monitoring plan will prioritize and guide monitoring for biological resources, including avian species, fish and invertebrates, as well as water quality, hydrology, air quality, and socioeconomics. The monitoring plan will inform status and trends of resources, as well as the implementation of future habitat and dust suppression projects. JD compiled the paleontological resource mitigation and monitoring plan and prepared the team for monitoring.

California Water Service Company, Palos Verdes Peninsula Water Reliability Project, Rolling Hills Estates, CA. Paleontologist. ESA provided a full suite of environmental services for the Palos Verdes Peninsula Water Reliability project. The proposed project involves the construction of approximately seven miles of buried potable water pipelines and a new booster pump station to replace the current water distribution system serving the Palos Verdes Peninsula. The large 7-mile utility/infrastructure project, which crossed multiple jurisdictions, including the cities of Rolling Hills Estates and Rancho Palos Verdes, and the County of Los Angeles. JD oversaw paleontological monitoring for reaches 3 and 4 and the pump station, coordinating finds, identifying fossils, and processing the fossils at the lab.

J.D. Stewart, Ph.D. (Continued)

Principal Paleontologist

Syphon Reservoir Geotechnical Investigations Project IS/MND, Orange County, CA. *Principal Paleontologist.* IRWD implemented the Geotechnical Investigations Project to characterize the geologic and geotechnical conditions of the Syphon Reservoir site to support the potential development of a future reservoir expansion. The Project included a combination of exploratory test pits, borings, and geophysical surveys to characterize the subsurface conditions of the soil at the Syphon Reservoir site and verified the characteristics of the Center Valley Fault. ESA provided extensive biological surveys and cultural surveys, assisted IRWD with AB 52 process for Tribal consultation. Dr. Stewart supervised paleontological monitoring during geotechnical explorations (including borings, exploratory test pits, and abutment/seismic trenches) at the Syphon Reservoir, as the project is located within geologic formations (Silverado and Sespe/Vaqueros) that have a high paleontological potential for yielding paleontological resources. Sediment sampling was conducted to identify the presence/absence of microvertebrate fossils.

Goetz Road Potable Water Storage Tank and Pipeline Project EIR, Riverside, CA. *Paleontologist.* ESA prepared an EIR and conducted supporting biological, archaeological, and paleontological surveys, as well as prepared visual simulations and a shade and shadow report for the Goetz Road Potable Water Storage Tank and Pipeline project. The project would involve construction and operation of an 8-million-gallon potable water storage tank in the City of Perris. JD led the paleontology survey.

City of Menifee, On-Call Consulting and Peer Review Services, Menifee, CA. *Paleontologist.* For 5 years, ESA has provided on-call peer reviews of more than 30 applicant-prepared cultural resources technical reports. ESA has become a trusted advisor to the City. JD has provided peer review of paleontology sections and reports for the City.

Rosedale-Rio Bravo Water Storage District, Onyx Ranch South Fork Valley Water Project EIR, Kern County, CA. *Paleontologist.* ESA prepared the EIR and associated technical studies to support the Onyx Ranch South Fork Valley Water Project. RRBWSD proposes to change the point of diversion and place of use for the water rights associated with Onyx Ranch and Smith Ranch on the South Fork of the Kern River. The intent of the project is to allow water to be delivered in the RRBWSD service area on the San Joaquin Valley floor and used for irrigation and groundwater recharge. The proposed project would assist the RRBWSD in meeting its sustainability goals under the Sustainable Groundwater Management Act. JD prepared the paleontology report to support the CEQA section.

Guild GC, 8777 Washington Boulevard MND, Culver City, CA. *Paleontologist.* ESA prepared an MND to address the proposed redevelopment of an approximately 1-acre property at 8777 Washington Boulevard north of the intersection at Washington Boulevard and National Boulevard in Culver City. The project is proposing a four-story building up to 56 feet. The project is proposing approximately 128,000 square feet of office space on Levels 2 through 4 and 4,500 square feet of retail/food retail on the ground level. JD provided monitoring oversight, oversaw fossil discovery, and processed fossil samples.

I-805 Managed Lanes South Project, Caltrans District 11, San Diego County, CA. *Paleontologist.* Dr. Stewart supervised the pedestrian survey of the project footprint and wrote the Paleontological Resource Assessment.

I-805 North Corridor Project, Caltrans District 11, San Diego County, CA. *Paleontologist.* Dr. Stewart supervised the pedestrian survey of the project footprint and wrote the Paleontological Resource Assessment.

Crestavilla Retirement and Assisted Living Community Project, Laguna Niguel, CA. *Principal Paleontologist.* Dr. Stewart supervised paleontological monitoring during the construction of a new 224-unit retirement and assisted living facility and an approximately 1,870 square-foot Spiritual Resource Center (Shepherd of the Hills Church) within a four-story structure located over a one-level subterranean parking structure. The monitoring led to the identification of a

remarkable collection of vertebrate fossils, including the first record of a gulper shark (*Centrophorus*) from any Neogene sediments of coastal California and the first reported specimens of the cookie-cutter shark (*Isistius*) from the Capistrano Formation. Additionally, the project yielded the most complete fossil tuna ever found in California and it probably represents a species new to science.

Palos Verdes Peninsula Water Reliability Project, Palos Verdes Peninsula, CA. *Principal Paleontologist.* Dr. Stewart supervised paleontological monitoring during construction of new potable water pipelines and a new booster pump station to replace the current water distribution system serving the Palos Verdes Peninsula. The monitoring led to the identification and salvage of numerous fossils from Altamira Shale deposits of the Monterey Formation, including fossils of leaf imprints, sardine scales, fish parts (vertebrae, dentary, mandible) and the fossil appendage (dactyl) of a type of Mantis shrimp (Stomatopod). The Mantis shrimp specimen is believed to be the only second known occurrence in southern California of *Angelosquilla altamierensis*, and the only one with a known precise locality and provenience.

Oaks at Monte Nido, Santa Monica Mountains, Unincorporated Los Angeles County, CA. *Principal Paleontologist.* Dr. Stewart was in charge of the preparation of the Paleontological Resources Assessment Report, which included a pedestrian survey. The pedestrian survey yielded the identification of a sandstone boulder that contains a fossil impression of the skull of a small-toothed cetacean “dolphin” and the identification of fossilized shells of pelecypods (e.g., bivalves such as clams, mussels, oysters, and cockles) and gastropods (e.g., snails and slugs). The project proposes the development of 15 single-family residences on separate individual recorded parcels within the Monte Nido Community, along the scenic route of Piuma Road.

Heritage Fields/Great Park Paleontological Review, Orange County, CA. *Principal Paleontologist.* Dr. Stewart conducted Phase I and II paleontological assessments at the Heritage Fields / Great Park in Orange County, California where he and his team discovered significant portions of a Miocene-aged (15 million years ago) whale fossil, and a Pleistocene microvertebrate fauna dating to before 28,000 years ago.

Calnev Pipeline Project, San Bernardino County, CA, and Clark County, NV. *Principal Paleontologist.* Dr. Stewart directed paleontological survey of a 234-mile-long project area in San Bernardino County, California and Clark County, Nevada and wrote the paleontological assessment.

Kyle Garcia, MA, RPA

Principal Archaeologist

EDUCATION

Santa Barbara County-Certified Archaeologist

40-Hour HAZWOPER Training – Update, 2023

PROFESSIONAL AFFILIATIONS

Society for American Archaeology

Society for California Archaeology

Pacific Coast Archaeological Society

Kyle Garcia has over 21 years of experience in the archaeology and prehistory of southern California, and meets and exceeds the Secretary of Interior Standards qualificaitons for a prehistoric and historic archaeolgoist. During his career, he has authored or contributed to more than 800 projects subject to the requirements of the California Environmental Quality Act, the National Environmental Policy Act (NEPA), and regulations implementing Section 106 of the National Historic Preservation Act (Section 106 of the NHPA). He is well-versed in the archaeological resources of California's coastal, interior, and island settings. He is skilled in evaluation historic and prehistoric archaeological resources; agency and Native American consultation; pedestrian surveys, testing and evaluation excavations as well as archaeological and paleontological construction monitoring, and laboratory processing. During his tenure, he has authored or contributed to more than 400 technical reports and sections to support all levels of CEQA and NEPA documents. Kyle's portfolio of projects includes energy, water, and transportation infrastructure as well as residential, commercial, mixed-use, institutional, and urban redevelopment serving public and private sector clients. Kyle has conducted archaeological work throughout California and is a certified archaeologist and paleontologist in Riverside, Santa Barbara, and Orange counties.

Relevant Experience

Archaeological/Paleontological Monitoring. Kyle has managed more than 120 archaeological and/or paleontological construction monitoring projects in Los Angeles, Orange, Riverside, San Bernardino, and Ventura counties. He has a commanding knowledge of the procedures to implement in the event of an inadvertent discovery during construction, and how to navigate an applicant or lead agency though that process to ensure compliance with the project's mitigation measures or conditions of approval and to reach consensus on treatment of the discovery, especially if the discovery is Native American in origin.

Paleontology. In addition to his archaeological work, Kyle has been cross-trained in paleontological mitigation monitoring and assisted in the excavations of a Miocene whale fossil near Irvine and a new species of extinct tuna in Laguna Niguel, California. Kyle has also managed or conducted more than 200 paleontological assessments and 40 paleontological monitoring projects throughout southern California. He has assisted ESA's paleontologists with the preparation of paleontological reports in compliance with CEQA and local paleontological guidelines, including guidelines for the Society for Vertebrate Paleontology.

Project Experience

Archaeological and Paleontological Monitoring for the LAX Crossfield Taxiway Improvements, Los Angeles, CA. *Project Manager/Archaeological Monitor.* Between 2009-2010, Kyle performed archaeological and paleontological monitoring services during

earthmoving operations associated with the development of the Crossfield Taxiway project in accordance with established mitigation measures from the LAX Crossfield Taxiway Project (CFTP) EIR. PCR conducted archaeological and paleontological field visits, paleontological sediment sampling, and monitoring of earthmoving operations associated with the construction of CFTP until activities requiring monitoring ended. These operations included excavations for filter boxes, water pipeline installation, and the realignment of World Way West. In addition to monitoring, Kyle performed an archaeology and paleontology training session for appropriate project personnel involved with construction of the project. The training session focused on how to identify archaeological and paleontological resources that may be encountered during earthmoving activities, and the procedures to be followed in such an event. No resources were identified during the monitoring effort and these findings were summarized in a report that was submitted to Los Angeles World Airports. Kyle served as project director/manager, crew chief, monitor, and co-author of the final report.

University High School Beautification Project, Los Angeles, CA. *Archaeologist*. Kyle performed archaeological monitoring during earth-moving activities on the campus. The archaeological monitoring program ensured the protection of the village site and springs, and resulted in the discovery of remains of the original portico of the Administration Building which was destroyed by the Long Beach Earthquake of 1933.

Rancho Campana High School and Performing Arts Center Construction Monitoring, Camarillo, CA. *Project Manager*. Kyle led the archaeological and paleontological monitoring for the project as a part of ESA's on-call contract with Oxnard Union High School. He managed and coordinated the effort and prepared the associated report. ESA identified two archaeological resources (56-001512/CA-VEN-1512 and 56-001513/CA-VEN-1513H) during monitoring efforts and several paleontological localities during the monitoring and sediment screening activities and worked together with the Ventureño Chumash regarding treatment for the archaeological resources. Although several archaeological and paleontological resources were encountered during the construction monitoring efforts, the resources were treated in accordance with the mitigation measures and, as a result, the impacts to the resources were reduced to a less than significant level pursuant to the CEQA.

Citron (Stella Park) Townhome Development, Escondido, CA: *Project Manager.* Kyle served as the project manager responsible for overseeing the archaeological and Native American monitoring at the project in accordance with the Conditions of Approval. The project included the construction of a 65-unit townhome development on a vacant 2.29-acre site in the City of Escondido.

Archaeological Monitoring, Test Excavations, and Data Recovery Excavations During Construction of the Crystal Geyser Roxane Cabin Bar Ranch Water Bottling Facility, Olancha, Inyo County, CA. *Principal Investigator/Project Director/Manager/Crew Chief.* Kyle managed/directed archaeological construction monitoring services in accordance with the Cultural Resources mitigation measures in the Mitigation Monitoring and Reporting Program (MMRP) of the EIR for the project. During initial clearing and grubbing activities associated with the project, five prehistoric archeological resources were encountered. Kyle assisted the Applicant in developing a cultural resources treatment plan to address identify, evaluate, and mitigate project impacts to these resources to a less than significant level. Pursuant to the MMRP, this treatment plan was developed in coordination with ESA (Kyle), the County, CG Roxane, and the Lone-Pine Pauite-Shoshone Reservation. The treatment plan included measures for resource avoidance, additional survey, and the excavation of nine controlled excavation units and multiple mechanical backhoe trenches across the project site. More than a 1,000 artifacts have been recovered from this project. This project began in 2015 and continues today.

Fatima Clark

Archaeologist

EDUCATION

BA, Anthropology, California State University, Fullerton

16 YEARS' EXPERIENCE

CERTIFICATIONS/ REGISTRATION

Orange County Certified Archaeologist

HAZWOPER Certified

PROFESSIONAL AFFILIATIONS

Society for California Archaeology

Fatima has 16 years of hands-on archaeological experience and is practiced in project management and client and agency coordination. Her field experience is complimented by the course study and participation in numerous archaeological excavations in California, Arizona, and Peru. Fatima has written California Environmental Quality Act (CEQA)-level technical reports, Environmental Impact Report (EIR) sections, Initial Study sections, archaeological peer reviews, archaeological monitoring reports, and reports pursuant to California Department of Transportation (Caltrans) requirements. She is also experienced in performing archaeological testing, site recordation, laboratory analysis, pedestrian surveys, records searches through several California Historical Resources Information Systems-Information Centers, and monitoring for a wide variety of projects, including mixed-use, residential, and energy, water, and road infrastructure projects. In addition to her archaeology background, Fatima has been cross-trained in conducting paleontological surveys and monitoring and has co-authored and managed associated reports.

Relevant Experience

Los Angeles Department of Water and Power, Fort Independence Travel Plaza Power Project, Independence (Owens Valley), CA. *Project Manager*. Fatima is in the process of preparing the cultural resources assessment in compliance with NEPA, Section 106, and CEQA. LADWP proposes to install 13 new temporary poles, one (1) anchor, and replace one (1) existing pole for a 34.5 kV line extension to provide power during construction of a new Travel Center at 141 N. Highway 395 in Fort Independence, Inyo County, California.

Landify ECT Corporation, Lower Sweetwater Park Project, City of Chula Vista, CA. *Project Manager*. Fatima has prepared a cultural resources assessment in compliance with CEQA. The Project proposes to redevelop the existing 21.3 acre Project Site with sports facilities within the City of Chula Vista.

County of Los Angeles, Department of Public Works, Whittier Boulevard Underground Utility Project, Los Angeles County, CA. *Project Co-Manager.* Fatima prepared the cultural resources assessment in support of a Class 2 Categorical Exemption. The project consists of the removal of utility poles and overhead lines, and the excavation for underground utility lines along Whittier Boulevard right-of-way. One historical resource, the early-to-mid 20th century Los Angeles Railway (or Yellow Cars), was identified in the project area as a result of archival research and geotechnical investigations. Fatima also managed the archaeological monitoring of construction activities and prepared the monitoring report.

City of Carson, Avocet Energy Storage System Project, City of Carson, CA. *Archaeologist.* Fatima managed the preparation of the archaeological and paleontological resources assessment reports in compliance with CEQA. The proposed Project includes the development of an approximately 200-megawatt battery energy storage system on a

6.96-acre site (BESS site), improvements and upgrades to the existing SCE Hinson Substation (SCE Hinson Substation site), the construction of a gen-tie line to connect to substation to the BESS site (proposed gen-tie line route), and other associated improvements. The proposed gen-tie route would cross three jurisdictions including: the City of Carson, the City of Los Angeles, and the City of Long Beach.

Storm Properties, Inc. Storm Hill Lane Project, Rolling Hills, CA. *Project Manager.* Fatima managed the day-to-day coordination for the monitoring and preparation of the archaeological/paleontological monitoring report pursuant to CEQA. As a result of the monitoring, several fossils were identified and these are currently being analyzed. The Project requires the reconstruction and expansion of Storm Hill Lane from the currently addressed and developed lot at 4 Storm Hill Lane to the three undeveloped lots.

Kiewit Infrastructure West Co., Ballona Wetlands Sequence 1 & 2 Restoration, Culver City, CA. *Project Manager.* Fatima managed the coordination for the monitoring with the archaeological and biological monitors, as well as coordination with the client. ESA's monitors were present during trenching and grading within portions of Ballona Creek in Culver City.

Southern California Association of Governments (SCAG) 2024 Connect SoCal Program PEIR, Los Angeles, Riverside, San Bernardino, Orange, Imperial and Ventura, CA. *Deputy Project Manager.* Fatima led the preparation of the PEIR Sections (cultural, paleontological, and tribal resources), as well as coordinated the Native American consultation efforts. Connect SoCal 2024 is a long-range comprehensive plan for the region's multi-modal transportation system. Preparing the Plan is one of SCAG's primary statutory responsibilities under federal and state law. A regional transportation plan (RTP) is the mechanism used in California by both metropolitan planning organizations and regional transportation planning agencies to conduct long-range (at least 20-year) planning in their regions. SCAG must adopt an RTP and update it every four years, or more frequently, if the region is to receive federal and state transportation dollars for public transit, streets/roads, and bicycle and pedestrian improvements.

Culver City, Crossings Campus (Culver City & City of Los Angeles, CA). *Deputy Project Manager.* Fatima led the preparation of the archaeological resources report and coordinated the preparation of the paleontological resources report. Fatima also led the preparation of the EIR sections (cultural, paleo, tribal). Culver Crossings Properties LLC, the Applicant, proposes to develop an office project (Project) on an approximately 4.46-acre site (Project Site) comprised of two properties: one 1.63-acre parcel is located in the City of Culver City (City), while the second 2.83-acre parcel is located in the City of Los Angeles.

County of San Diego Department of Parks and Recreation, Sweetwater Campground Geotech Boring Monitoring, San Diego County, CA. *Project Co- Manager.* Fatima co-managed the archaeological monitoring and coordinated with Red Tail for Native American monitoring and the County of San Diego Department of Parks and Recreation during Geotech borings for the Project.

Los Angeles County Department of Regional Planning, East San Gabriel Valley Area Plan (ESGVAP) Program EIR, Eastern Portion of Los Angeles County, CA. *Deputy Project Manager.* Fatima managed the preparation of the PEIR Sections (cultural, paleontological, and tribal resources). The ESGVAP is part of the Los Angeles County 2035 General Plan, which will require an amendment. The ESGVAP is a long-range policy document developed to guide long-term growth of the area through development of a guiding vision, goals, policies, and implementation actions for the unincorporated communities in the East San Gabriel Valley. The ESGVAP's planning area consists of 24 unincorporated islands and communities and encompasses a total land area of 210.5 square miles.

Fatima Clark (Continued)

Archaeologist

Los Angeles County Department of Regional Planning, Los Angeles County 2045 Climate Action Plan (CAP) Update and PEIR, Los Angeles County, CA. *Deputy Project Manager.* Fatima managed the preparation of the PEIR Sections (cultural, paleontological, and tribal resources). The County adopted the *Unincorporated Los Angeles County Community Climate Action Plan 2020* (2020 CCAP) in 2015 as a component of the Air Quality Element of the General Plan. The 2020 CCAP aligned with General Plan goals, policies, and programs, as well as several other existing programs in Los Angeles County. The 2020 CCAP was the first attempt to set greenhouse gas (GHG) emissions reduction goals in Los Angeles County. Although the targets for the 2020 CCAP were ultimately not fully met, the plan provided a road map for implementing the County's GHG reduction measures. The 2020 CCAP actions were implemented through County Code amendments and programs related to climate action. The Draft 2045 CAP builds on previous work and defines new reduction targets beyond the year 2020.

Eastern Municipal Water District, San Jacinto Valley Groundwater Treatment Facility Project, San Jacinto, CA. *Archaeologist.* Fatima assisted with the Phase II archaeological testing for the Project. The site was the location of the region's first trading post/general store, established ca. 1868. It later became the Palma Hotel, constructed by Henry T. Hewitt. The hotel was also used as a Riverside County hospital before it was destroyed in an earthquake in 1899.

San Manuel Band of Mission Indians, Sand Canyon Flood Control Permitting Project, San Bernardino County, CA. *Archaeologist.* Fatima was in charge of preparing the cultural resources assessment in compliance with Section 106. Fatima also conducted the pedestrian survey. The San Manuel Band of Mission Indians is considering taking over operation and maintenance of a concrete-lined channel and debris basin (known as Sand Creek) along Sand Canyon, within unincorporated San Bernardino County.

City of Long Beach, 615 E. Ocean Boulevard Project, Long Beach, CA. *Deputy Project Manager.* Fatima led the preparation of the cultural and paleontological resources reports in support of an addendum to the Certified City of Long Beach Downtown Plan Program Environmental Impact Report. The Project would develop a 21-story high-rise residential building on an approximately 0.4-acre site located at 615 East Ocean Boulevard within the City's limits (Project site).

City of Long Beach Department of Development Services, Planning Bureau, 7250 Carson Street Project, City of Long Beach, CA. *Deputy Project Manager.* Fatima led the preparation of the cultural and paleontological resources reports in compliance with CEQA. The Project Applicant proposes to subdivide a 20-acre parcel into two parcels (Parcel A and Parcel B). Other than the approval of the tentative parcel map to subdivide the existing parcel, no proposed improvements or development for Parcel A are included as part of the Project. Development of Parcel B (Project Site) would include the development of two fast-food restaurants and parking spaces.

City of Diamond Bar, Crooked Creek Residential Subdivision Project, Los Angeles County, CA. *Archaeologist.* Fatima conducted the archaeological and paleontological resources assessments in compliance with CEQA and the City of Diamond Bar General Plan Policy RC-P-42. The studies included records searches, pedestrian survey, and subsurface sensitivity assessments. No cultural resources were identified in the project site, but the area was found to have the potential to contain subsurface prehistoric archaeological resources and paleontological resources. The project consisted of the development of seven single-family residences and associated infrastructure on approximately 2.5 acres. The project required approval of a Vesting Tentative Tract Map, Conditional Use Permit, Tree Permit, and Development Review.

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by Link Logistics Real Estate to conduct a Phase I Environmental Site Assessment (Phase I ESA) in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 5751-5769 Uplander Way; 5801-5819 Uplander Way; 5834A-5859 Uplander Way; 5800-5860 Hannum Avenue, Culver City, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

Pertinent subject property information is noted below:

PROPERTY INFORMATION	
Site Address(es)	5751-5769 Uplander Way; 5801-5819 Uplander Way; 5834A-5859 Uplander Way; 5800-5860 Hannum Avenue, Culver City, Los Angeles County, California 90230
Property ID (APN or Block/Lot)	4134-005-021
Location	Southwest corner of the intersection of Uplander Way and Hannum Avenue
Property Type	Office

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) of 5751-5769 Uplander Way; 5801-5819 Uplander Way; 5834A-5859 Uplander Way; 5800-5860 Hannum Avenue, Culver City, Los Angeles County, California, the *subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

This assessment has revealed no evidence of Recognized Environmental Conditions (RECs) or Controlled Recognized Environmental Conditions (CRECs) in connection with the subject property.

Other Environmental Considerations include, but are not limited to, de minimis conditions and/ or business environmental risks such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate,

not necessarily limited to those environmental issues required to be investigated in the ASTM Standard. These may also affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

This assessment has revealed no evidence of related conditions of concern in connection with the subject property, except for the following:

- Asbestos - Based on the age of the buildings, asbestos may be present in the building material. Given the good condition of the suspect ACM, these materials can be effectively managed as part of an Asbestos O&M Plan until such time as renovation or demolition activities necessitate their removal. The objective of an O&M Plan is to implement a practical management approach to controlling identified ACM within the subject property. The O&M Plan is designed to cleanup existing contamination, minimize future fiber release by controlling disturbance of ACM, and monitor the condition of the ACM until it is removed. An O&M Plan was not in place at the subject property.
-

RECOMMENDATIONS

Based on this assessment, AEI recommends the following:

- Based the good condition of the suspect ACM, these materials can be effectively managed in place as part of an Asbestos O&M Plan. An Asbestos O&M Plan should be developed and implemented at the property.

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I Environmental Site Assessment performed in accordance with AEI's proposal and in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 5751-5769 Uplander Way; 5801-5819 Uplander Way; 5834A-5859 Uplander Way; 5800-5860 Hannum Avenue, Culver City, Los Angeles County, California (Appendix A: Figures and Appendix B: Property Photographs).

1.1 SCOPE OF WORK

This ESA was performed in conformance with ASTM E1527-13 "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" . The scope of work for this Phase I ESA included: 1) a review of federal, state, tribal and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a Property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

The goal of AEI Consultants in conducting the environmental site assessment was to identify the presence or likely presence of any hazardous substances or petroleum products on the Property that may indicate an existing release, a past release, or a material threat of a release of any hazardous substance or petroleum product into the soil, groundwater, or surface water of the Property.

Recognized Environmental Condition (REC) - is defined by the ASTM Standard Practice E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

Historical Recognized Environmental Condition (HREC) - A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

Controlled Recognized Environmental Condition (CREC) - A past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

De minimis Conditions - Are conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions nor controlled recognized environmental conditions.

Other Environmental Considerations include, but are not limited to, de minimis conditions and/or business environmental risks (BERs) such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in the ASTM Standard. These may also affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

1.2 Additional Services

Other Environmental Considerations such as ACMs, LBP, lead in drinking water, radon, mold, and wetlands can result in business environmental risks for property owners which may disrupt current or planned operations or cash flow and are generally beyond the scope of a Phase I assessment as defined by ASTM E1527-13. Based upon the agreed-on scope of services this ESA did not include subsurface or other invasive assessments, business environmental risks, or other services not specifically identified and discussed herein.

1.3 Significant Assumptions

The following assumptions are made by AEI in this report. AEI relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow, unless otherwise specified by on-site well data or well data from the subject property or nearby sites, is inferred from contour information depicted on the USGS topographic maps. AEI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.4 Limitations

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations and property conditions existing at the time the assessment was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably

representative of the property. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-13.

If requested by the client, these non-scope issues are discussed herein. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under CERCLA. ASTM Standard Practice E1527-13 and the United States EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1. 42 U.S.C. § 9601(35)(B), referenced in the ASTM Standard Practice E1527-13.
2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
3. 42 U.S.C. § 9601(40) and 42 U.S.C. § 9607(q).

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, current subject property use, and observations and conditions that existed on the date and time of the property reconnaissance.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

AEI's limited radon screening, if included, is intended to provide a preliminary screening to evaluate the potential presence of elevated radon concentrations at the site. The proposed scope is not intended to define the full extent of the presence of radon at the subject property. As such, the results should be used for lending purposes only. The recommendations and conclusions presented as a result of the limited preliminary radon screening apply strictly to the property

conditions existing at the time the sampling was performed. The sample analytical results are only valid for the time, place, and condition of the site at the time of collection and AEI does not warrant that the results will be repeatable or are representative of past or future conditions.

1.5 Limiting Conditions/Deviations

The performance of this assessment was limited by the following:

- On May 11, 2022, the City of Culver City Building, Planning and Fire Departments were contacted for information pertaining to the subject property. As of the issuance of this report, records at the agencies were not available for review. However, based on the quality of information obtained from other sources, including review of historical and regulatory records, this limitation is not expected to significantly alter the findings of this assessment.
- The subject property owner was not interviewed during this assessment. Based on information obtained from other sources, including the key site manager, this limiting condition is not expected to alter the overall findings of this assessment.
- AEI observed a representative sample of interior units: 5800, 5801, 5803, 5817, 5847, 5860, 5751, 5753, 5759, 5765, 150 and 203. In addition, AEI observed common and exterior areas of the property, including list the common and exterior areas inspected. Based on the nature of property occupancy, this method of assessment is presumed to be appropriate due to the size of the subject property.
- Due to the large volume of materials within portions of the building and vehicles parked within exterior areas, direct visual observation of many of the floor and wall areas of the building and exterior ground surfaces was not possible. Features may be present that were not observed during AEI's field reconnaissance. Based on the quality of information obtained from other sources, this limitation is not expected to alter the overall findings of this assessment.

1.6 Data Failure and Data Gaps

In conformance with ASTM E1527-13, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to ASTM E1527-13, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

Data failure is one type of data gap. In conformance with ASTM E1527-13, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant to ASTM E1527-13, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

1.6.1 Data Failure

AEI did not identify evidence of data failure during the course of this assessment.

1.6.2 SIGNIFICANT DATA GAPS

AEI did not identify significant data gaps which affected our ability to identify RECs.

1.7 RELIANCE

All reports, both verbal and written, are for the benefit of Link Logistics Real Estate. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns.

Reliance is provided in accordance with AEI's contract and Terms and Conditions executed by Link Logistics Real Estate on May 4, 2022. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

Reliance to LINK is for the purposes of obtaining financing. No other purposes were intended or anticipated by LINK or AEI.

2.0 SITE AND VICINITY DESCRIPTION

2.1 SITE LOCATION AND DESCRIPTION

The subject property is located on the southwest corner of the intersection of Uplander Waya and Hannum Avenue in a commercial area of Culver City, California. The property totals approximately 8.3 acres and is improved with 4 Two-story buildings totaling approximately 146,414 square feet. The subject property is currently occupied by multiple commercial office tenants. On-site operations consist of typical office and administrative activities. In addition to the subject property buildings, the property is improved with asphalt-paved parking areas and associated landscaping.

PROPERTY INFORMATION	
Site Address(es)	5751-5769 Uplander Way; 5801-5819 Uplander Way; 5834A-5859 Uplander Way; 5800-5860 Hannum Avenue, Culver City, Los Angeles County, California 90230
Property ID (APN or Block/Lot)	4134-005-021
Location	Southwest corner of the intersection of Uplander Way and Hannum Avenue
Property Type	Office
SITE AND BUILDING INFORMATION	
Approximate Site Acreage/Source	8.3/Assessor
Number of Buildings	4
Building Construction Date(s)/Source	1978-1979/Assessor
Building Square Footage (SF)/Source	146,414/Assessor
Net Rentable Square Footage (SF)/Source	146,414/Assessor
Number of Floors/Stories	Two
Basement or Subgrade Area(s)	None identified
Number of Units	Unknown; a rent roll was not provided
Additional Improvements	Asphalt-paved parking areas and associated landscaping
On-site Occupant(s)	Multiple commercial office tenants
Current On-site Operations/Use	Typical office and administrative activities
Current Use of Hazardous Substances	Yes; refer to Section 7.1
REGULATORY INFORMATION	
Regulatory Database Listing(s)	RCRA NonGen/NLR, RCRA-SQG, CERS HAZ WASTE, CERS, SWEEPS UST, HAZNET, HWTS

2.2 ON-SITE UTILITIES

Utility	Source/System Information
Heating System	Natural gas
Cooling System	Electricity
Potable Water	Metropolitan Water District
Sewage Disposal/Treatment	Culver City Sanitation

Utility source/system information listed in the table above is provided by the City of Culver City, unless otherwise noted above.

2.3 SITE AND VICINITY CHARACTERISTICS

The subject property is located in a commercial area of Culver City, California. The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
North	Hannum Avenue followed by: Multi-Tenant Commercial (5800 Bristol Parkway) Parking Garage (5701 Hannum Avenue)	None identified
East	Uplander Way followed by; Haas Entertainment (5750 Hannum Avenue) VET Center (5730 Uplander Way) APIC Corporation (5800 Uplander Way)	RCRA-SQG, FINDS, ECHO, EMI, LOS ANGELES CO. HMS (5750 Hannum Avenue)
South	Multi-Tenant Commercial (5820-5826 Uplander Way) Multi-Tenant Commercial (5830-5832 Uplander Way) Multi-Tenant Commercial (5840-5844 Uplander Way)	RCRA-LQG, RCRA-SQG, FINDS (x2), ECHO 2x (5822-5826 Uplander Way) RCRA-SQG, CERS HAZ WASTE, HAZNET, CERS, HWTS (5830-5832 Uplander Way)
West/ Northwest	Culver City Fire Department (6030 Uplander Way) Multi-Tenant Commercial (6076 Uplander Way) Bristol Parkway, followed by: Commercial office (6001 Bristol Parkway) Intersection between Hannum Avenue and Bristol Parkway, followed by a parking garage (801 Corporate Pointe)	RCRA-NonGen/NLR (x2), FINDS, ECHO (6076 Uplander Way)

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

2.4 PHYSICAL SETTING

Geologic Unit: Description/Source	The City of Culver City is in the convergence of the Transverse Ranges and the Peninsular Ranges. The east west trending transverse ranges began during the Mesozoic age. During this phase, Cretaceous-Paleogene rocks were deposited. This was followed by the opening of the Gulf of California during the Miocene-Pliocene age/USGS

Soil Series: Description/Source	The dominant surficial soil deposits are Holocene sediments of modern alluvial fans and fluvial deposits consisting of cobble, pebble and clay, with a zone of fine to medium grained dune sand/USDA/NRCS
USGS Topographic Map	Venice, CA, California Quadrangle
Nearest surface water to subject property	Ballona Creek/1.4 miles west
Flood Zone	According to FEMA Flood Insurance Rate Map (FIRM) No. 06011F dated 09/26/08, the subject property is located in Zone X (shaded), designated as an area within the 500-year flood zone. FEMA Map #06037C1760F dated 09/26/08
Wetlands	No

Groundwater Flow Direction/Source	Southwest/GeoTracker - 11236 Playa Court, .470 mile northwest of the subject property
Estimated Depth to Groundwater/ Source	19-24 feet bgs/GeoTracker - 11236 Playa Court, .470 mile northwest of the subject property

Note: Groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

As the former wetlands have been filled/developed, authorization for such action should be provided.

3.0 HISTORICAL SUMMARY

Reasonably ascertainable standard historical sources as outlined in ASTM Standard E1527-13 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historical city directories, Sanborn fire insurance maps, and agency records, is as follows:

Date Range	Subject Property Description and Use (Historical Addresses)	Source(s)
1923-1976	Unimproved land	Aerial photographs
1978-1979	Current buildings constructed for commercial use (5751-5769, 5801-5819 & 5835A-5859 Uplander Way and 5800-5860 Hannm Avenue)	Agency records
1978/ 1979-Present	Current commercial buildings/Multiple commercial tenants	Aerial photographs, city directories, site observation

Based on a review of historical sources, the subject property was identified to consist of unimproved land from 1923 through 1978/1979. The subject property was developed in 1978/ 1979.

AEI did not identify potential environmental concerns in association with the current or historical use of the subject property.

If available, copies of historical sources are provided in the report appendices.

3.1 AERIAL PHOTOGRAPHS

AEI reviewed aerial photographs of the subject property and surrounding area. A search was made of the EDR collection of aerial photographs. Aerial photographs were reviewed for the following years:

Year(s)	Subject Property Description	Adjoining Site Descriptions
1923, 1928, 1938, 1947, 1952, 1963, 1970	Unimproved land	NORTH: Unimproved land EAST: Unimproved land SOUTH: Unimproved land WEST: Unimproved land
1976	No significant changes	NORTH: Roadway followed by commercial development EAST: No significant changes SOUTH: No significant changes WEST: No significant changes
1983	Developed with current configuration	NORTH: Roadway followed by vacant land EAST: Roadway followed by commercial development

Year(s)	Subject Property Description	Adjoining Site Descriptions
		SOUTH: Commercial development WEST: Commercial development, roadway followed by commercial development
1989, 2002, 2005, 2009, 2012, 2016	No significant changes	NORTH: Roadway followed by commercial development EAST: No significant changes SOUTH: No significant changes WEST: No significant changes

AEI did not identify potential environmental concerns in association with the historical use of the subject property during the aerial photograph review.

3.2 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of the EDR collection of Sanborn Fire Insurance maps.

Sanborn map coverage was not available for the subject property.

3.3 City Directories

A search of historical city directories was conducted for the subject property utilizing EDR. The following table summarizes the results of the city directory search.

If listed above, XXXX indicates that the address is valid but there is no occupancy information available.

AEI did not identify potential environmental concerns in association with the historical use of the subject property during the city directory review.

If available, copies of historical city directories are provided in the report appendices.

3.4 Historical Topographic Maps

Based on the quality of information obtained from other sources, historical topographic maps were not reviewed as a part of this assessment.

3.5 Chain of Title

In accordance with our approved scope of services, a chain of title search was not performed as part of this assessment.

4.0 REGULATORY AGENCY RECORDS REVIEW

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous substance use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to AULs, defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1 LOCAL ENVIRONMENTAL HEALTH DEPARTMENT AND/OR STATE ENVIRONMENTAL AGENCY

On May 11, 2022, AEI contacted the Los Angeles County Public Health Department (LACPHD) via the agency's Website for information on the subject property. Files at this agency may contain information regarding hazardous substance storage and use, underground storage tanks, unauthorized releases of petroleum hydrocarbons or other contaminants that may affect the soil or groundwater in the area, wells and/or septic systems.

According to the LACPHD, all records pertaining to the current and/or historical hazardous materials usage, storage or releases as well as the presence of USTs is maintained by the Los Angeles County Fire Department Health Hazardous Materials Division (LACFD). Refer to Section 4.2.

4.2 FIRE DEPARTMENT

On May 11, 2022, AEI contacted the Culver City Fire Department (CCFD) via the agency's Website for information on the subject property to identify any evidence of previous or current hazardous substance usage and/or for any historical information available for the subject property.

As of the date of this report, the agency response was pending. Please refer to Section 1.5 for additional information.

On May 11, 2022, AEI contacted the Los Angeles County Fire Department Health Hazardous Materials Division (LACoFDHHMD) via the agency's website for information on the subject property to identify any evidence of previous or current hazardous substance usage and/or for any historical information available for the subject property. AEI received a written response from the LACoFDHHMD which indicated that there were no records on file for the subject property with the LACoFDHHMD.

4.3 BUILDING DEPARTMENT

On May 11, 2022, AEI contacted the Culver City Building Department (CCBD) via the agency's Website for information on the subject property in order to identify historical tenants, features of concern and property use.

As of the date of this report, the agency response was pending. Please refer to Section 1.5 for additional information.

4.4 Planning Department

On May 11, 2022, AEI contacted the Culver City Planning Department (CCPD) via the agency's Website for information on the subject property in order to identify AULs associated with the subject property.

As of the date of this report, the agency response was pending. Please refer to Section 1.5 for additional information.

4.5 Assessor's Office

On June 6, 2022, AEI contacted the Los Angeles County assessor's office via the agency's Website for information on the subject property in order to determine the earliest recorded date of development and use.

Please refer to the following table for information obtained:

APN	4134-005-021
Acreage	8.3 acres
Construction Date	1978-1979
Building Square Footage	146,414 square feet
Current Owner	PS Business Parks

4.6 Other Agencies Searched

SWRCB GeoTracker Database Summary

Date	Occupant	Document Type	Document Notes/Violations
June 6, 2022	N/A	N/A	There were no records on file for the subject property

California DTSC HWTS Database Summary

Occupant	Year(s)	Hazardous Waste Generated	Amount (Tons)
Fox Hills Printing, 5815 Uplander Way	2012	Photo Chemicals	0.44
Fox Hills Printing, 5815 Uplander Way	2013	Photo Chemicals	0.67
Fox Hills Printing, 5815 Uplander Way	2014	Photo Chemicals	0.18
Fox Hills Printing, 5815 Uplander Way	2015	Photo Chemicals	0.39
Fox Hills Printing, 5815 Uplander way	2016	Photo Chemicals	0.17
Fox Hills Printing, 5815 Uplander Way	2017	Photo Chemicals	1.22
Fox Hills Printing, 5815 Uplander Way	2018	Photo Chemicals	0.15
Fox Hills Printing, 5815 Uplander Way	2019	Photo Chemicals	0.20

The subject property is a commercial printing facility which uses reportable quantities of inks and solvents in normal printing operations. No violations have been reported for the subject property by any regulatory agencies. Hazardous materials that are utilized on site include photo chemicals. AEI did not have access to this tenant space and was therefore unable to observe

the housekeeping conditions. Based on the reportable quantities present, the lack of reported violations, the lack of a documented release, and minor quantities, used, the hazardous waste generated onsite is not expected to represent a significant environmental concern.

California DTSC Envirostor Database Summary

Date	Occupant	Document Type	Document Notes/Violations
June 6, 2022	N/A	N/A	There were no records on file for the subject property

On June 6, 2022, AEI contacted the South Coast Air Quality Management District (AQMD) for information regarding any records of PTO, NOV, or NTC issued to occupants of the subject property and associated with air emission equipment primarily related to stationary sources of air pollution, such as dry cleaning machines, boiler, and/or underground storage tanks. No information indicating the existence of any PTOs, NOVs, or NTCs was on file for the subject property with the AQMD.

4.7 Oil and Gas Wells

On June 6, 2022, AEI reviewed the California Geologic Energy Management Division (CalGEM) maps concerning the subject property and nearby properties. The maps contain information regarding oil and gas well development.

According to the CalGEM map, oil or gas wells are not located within 500 feet of the subject property. AEI did not identify evidence of environmental concerns during the map review.

4.8 Oil and Gas Pipelines

On June 6, 2022, AEI reviewed the National Pipeline Mapping System (NPMS) Public Map Viewer concerning the subject property and nearby properties. The maps contain information regarding oil and gas pipeline development.

According to the NPMS map, oil or gas pipelines are not located within 500 feet of the subject property. AEI did not identify evidence of environmental concerns during the map review.

4.9 State Environmental Superliens

On June 6, 2022, the NETR Online Environmental Lien and AUL State Statutes website was visited to determine if the State of California has an environmental superlien which would allow environmental authorities the right to place a first priority lien on the subject property.

According to the NETR Online Environmental Lien and AUL State Statutes website, the State of California does not allow environmental superliens.

4.10 State Property Transfer Laws

Aspects of a property's coverage generally fall under state disclosure laws which are considered legal issues, and as such legal counsel should be consulted.

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted EDR to conduct a search of publicly available information from federal, state, tribal, and local databases containing known and suspected sites of environmental contamination and sites of potential environmental significance. Data gathered during the current regulatory database search is compiled by EDR into one regulatory database report. Location information for listed sites is designated using geocoded information provided by federal, state, or local agencies and commonly used mapping databases with the exception of "Orphan" sites. Due to poor or inadequate address information, Orphan sites are identified but not geocoded/mapped by EDR, rather, information is provided based upon vicinity zip codes, city name, and state. The number of listed sites identified within the approximate minimum search distance from the federal and state environmental records database listings specified in ASTM Standard E1527-13 is summarized in Section 5.1, along with the total number of Orphan sites. A copy of the regulatory database report, which includes detailed descriptions of the databases noted below, is included in Appendix C of this report.

In determining if a listed site is a potential environmental concern to the subject property, AEI generally applies the following criteria to classify the site as lower potential environmental concern: 1) the site only holds an operating permit (which does not imply a release), 2) the site's distance from, and/or topographic position relative to, the subject property, and/or 3) the site has recently been granted "No Further Action" by the appropriate regulatory agency.

Regulatory database listings associated with the subject property, adjoining site(s) and/or nearby sites of concern that were determined to warrant additional discussion are identified and further discussed in Section 5.1.

5.1 RECORDS SUMMARY

Database	Search Distance (Miles)	Subject Property Listed	Number of Listings within Search Distance	REC or OEC (Yes or No)
NPL	1	No	0	
DELISTED NPL	0.5	No	0	
SEMS (formerly CERCLIS)	0.5	No	0	
SEMS-ARCHIVE (formerly CERCLIS NFRAP)	0.5	No	2	No; based upon the distance and relative gradient, the sites are not expected to represent a significant environmental concern.
RCRA CORRACTS	1	No	0	
RCRA-TSDF	0.5	No	0	
RCRA LQG, SQG, CESQGs, VGN, NLR	SP/ADJ	No	10	No; however, see below for further discussion of the identified listing(s).
US ENG CONTROLS	SP	No	0	
US INST CONTROLS	SP	No	0	
ERNS	SP	No	0	

Database	Search Distance (Miles)	Subject Property Listed	Number of Listings within Search Distance	REC or OEC (Yes or No)
STATE/TRIBAL HWS	1	No	8	No; based upon the distance and relative gradient, the sites are not expected to represent a significant environmental concern.
STATE/TRIBAL SWLF	0.5	No	0	
STATE/TRIBAL REGISTERED STORAGE TANKS	SP/ADJ	No	0	
STATE/TRIBAL LUST	0.5	No	6	No; based upon the distance and relative gradient, the sites are not expected to represent a significant environmental concern.
STATE/TRIBAL EC and IC	SP	No	0	
STATE/TRIBAL VCP	0.5	No	1	No; based upon the distance and relative gradient, the sites are not expected to represent a significant environmental concern.
STATE/TRIBAL BROWNFIELD	0.5	No	0	
ORPHAN	N/A	No	3	No; none of the identified orphan sites are located in the immediate vicinity (500-feet) of the subject property, and/or based upon the distance and relative gradient, the sites are not expected to represent a significant environmental concern.
ADDITIONAL ENVIRONMENTAL RECORD SOURCES	SP/ADJ	No	See below	No; however, see below for further discussion of the identified listing(s).

Facility Name	Samatdary Inc. DBA Rapid Plumbing
Address	5761 Uplander Way
Distance & Direction	Subject Property
Hydrologic Position	N/A
Databases Listed	RCRA NonGen/NLR
Comments	This tenant was listed as a RCRA Non-Generator in 2009. No violations were reported. Based on the lack of a documented release and lack of reported violations, this listing is not expected to represent a significant environmental concern.

Facility Name	Fox Hills Printing
Address	5815 Uplander Way

Distance & Direction	Subject Property
Hydrologic Position	N/A
Databases Listed	RCRA-NonGen/NLR, CERS HAZ WASTE, HAZNET, HWTS
Comments	The property was listed on the RCRA NonGen/NLR database in 1992 with no reported violations. The property is listed on the CERS HAZ WASTE with no violations found and a description of: Hazardous Waste Generator - Compliance Evaluation Inspections conducted by the Los Angeles County Fire Department. The property is listed on the HAZNET database in 2012 for 0.44 tons, in 2013 for 0.67 tons, in 2014 for 0.18 tons, in 2015 for 0.39 tons, in 2016 for 0.17 tons, in 2017 for 1.22 tons, in 2018 for 2019 for 0.20 tons of photo chemicals. All of the photochemicals were sent to storage except in 2013 which were sent for metals recovery. The property is listed on the HWTS database on 09/17/92 with an active status. Based on the lack of a documented release and lack of reported violations, these listings are not expected to represent a significant environmental concern.

Facility Name	Cigna Health Plans, Fox Hills Investments
Address	5800 Hannum Avenue
Distance & Direction	Subject Property
Hydrologic Position	N/A
Databases Listed	RCRA-SQG, SWEEPS UST
Comments	Cigna Health Plans, Fox Hills Investments: The property is listed on the RCRA-SQG database as pharmacies and drug store with no reported violations. Fox Hills Investments: The property is listed on the SWEEPS UST database with an active status with an unreported number of tanks, tank capacity and tank status. AEI did not observe any evidence of USTs during the site inspection. In addition, Mr. Craig Morrow, Regional Vice President and Ms. Elva Chavez, Key Site Manager, had no knowledge of USTs at the site. Based on this information and the lack of reported violations, these listings are not expected to represent a significant environmental concern.

Facility Name	Patriot Environmental Laboratory Service, Lyxia Corp.
Address	5830 Hannum Avenue
Distance & Direction	Subject Property
Hydrologic Position	N/A
Databases Listed	RCRA NonGen/NLR, CERS HAZ WASTE, CERS
Comments	Patriot Environmental Laboratory Service: This site was identified as a RCRA Non-Generator in 2013 with no reported violations. The property is listed on the CERS HAZ WASTE database as a hazardous waste generator. The property is

	listed on the CERS database on 05/31/2017 for failure to conduct a source reduction evaluation review and failure to comply with universal waste handler management practices. This site returned to compliance on 6/14/2017. Lyxia Corp.: The property was identified as a RCRA Non-Generator in 2021 with no reported violations. Based on the lack of reported or active violations, these listings are not expected to represent a significant environmental concern.

Facility Name	Modern Health Laboratories
Address	5826 Uplander Way
Distance & Direction	Adjoining approximately 378 feet to the south-southeast
Hydrologic Position	Down-gradient
Databases Listed	RCRA-LQG, FINDS, ECHO
Comments	The property is listed on the RCRA-LQG database for ignitable waste with no reported violations in 2016. This property is listed as a FINDS and ECHO site in association with the RCRA listing. No violations or enforcement actions were identified on the EPA websites Envirofacts and ECHO. Based on the nature of this listings and lack of violations, they are not expected to represent a significant environmental concern. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	Uyemura International Corp.
Address	5828 Uplander Way
Distance & Direction	Adjoining approximately 348 feet to the south-southeast
Hydrologic Position	Down-gradient
Databases Listed	RCRA-SQG, FINDS, ECHO
Comments	The property is listed on the RCRA-SQG database with no reported violations in 1988. This property is listed as a FINDS and ECHO site in association with the RCRA listing. No violations or enforcement actions were identified on the EPA websites Envirofacts and ECHO. Based on the nature of this listings and lack of violations, they are not expected to represent a significant environmental concern. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	Psychemedics Corp.
Address	5832 Uplander Way

Distance & Direction	Adjoining approximately 392 feet to the south
Hydrologic Position	Down-gradient
Databases Listed	RCRA-SQG. CERS HAZ WASTE, HAZNET, CERS, HWTS
Comments	The property is listed on the RCRA-SQG database for ignitable waste, spent halogenated solvents and spent non-halogenated solvents with no violations found. The property is listed on the CERS HAZ WASTE database as a hazardous waste generator. The property is listed on the HAZNET database in 2016 for 1.02 tons and in 2017 for 0.12 tons of solvent mixture which was sent to storage, in 2017 for 0.004 tons of off-specification, aged organics which were sent to storage, in 2018 for 0.003 tons of laboratory waste chemicals which were sent for incineration and in 2019 for 0.008 tons of aqueous solution which was sent for recovery. The property is listed on the CERS database on 01/14/14 for failure to maintain uniform hazardous waste manifest and for routine inspections conducted by the Culver City Fire Department with no violations found. The property is listed on the HWTS database with a create date of 05/22/12 and an unreported inactive date. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	Primary Color
Address	5750 Hannum Avenue
Distance & Direction	Adjoining to the east
Hydrologic Position	Cross-gradient
Databases Listed	RCRA-SQG, FINDS, ECHO, EMI, LOS ANGELES CO. HMS
Comments	The property is listed on the RCRA-SQG database for ignitable waste with no reported violations in 1997. This property is listed as a FINDS and ECHO site in association with the RCRA listing. No violations or enforcement actions were identified on the EPA websites Envirofacts and ECHO. Based on the nature of this listings and lack of violations, they are not expected to represent a significant environmental concern. The EMI listing reports air emissions. Based on the nature of this listing, it is not expected to represent a significant environmental concern. According to the Los Angeles Co. HMS, this is a closed facility. No further information was provided. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	IV League Inc., Wang Laboratories Inc.
Address	6076 Uplander Way
Distance & Direction	Adjoining to the west

Hydrologic Position	Down-gradient
Databases Listed	RCRA-NonGen/NLR 2x, FINDS, ECHO
Comments	Ivy League Inc. was identified as a RCRA Non-Generator in 2020. Wang Laboratories, Inc. was identified as a RCRA Non-Generator in 1980. These tenants were is listed as a FINDS sites in association with the RCRA listing. No violations or enforcement actions were identified on the EPA websites Envirofacts and ECHO. Based on the nature of this listings and lack of violations, they are not expected to represent a significant environmental concern. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

5.2 VAPOR MIGRATION

AEI conducted a limited screening for potential vapor encroachment conditions (VECs) that may affect the property. The VEC screening focused on the current and historical usage of the property and also utilized the aforementioned regulatory agency database report provided by EDR to evaluate identified Chemicals of Concern (COCs), including petroleum hydrocarbons. To identify the area of concern (AOC) for contaminated sites with non-petroleum hydrocarbon COCs, AEI utilized the approximate minimum search distance defined by ASTM E 2600-15 of 1,760 feet (1/3 mile) from the property boundary for COC-contaminated sites. For sites contaminated with petroleum hydrocarbon COCs, AEI utilized the AOC approximate minimum search distance of 528 feet (1/10 mile). The AOC was adjusted accordingly based on review of physical setting characteristics, known release information, property and land features, groundwater flow direction, and soil type, et al.

ASTM's Vapor Encroachment guidance indicates that when groundwater flow direction can be estimated or determined, the cross-gradient or downgradient radius distances can be significantly reduced. AEI calculated the reduced AOC distances when considering groundwater flow direction by utilizing the following default distances, which were determined using the Buonicore Methodology: (non-petroleum hydrocarbon COCs) 1,760 feet in the upgradient direction; 365 feet in the cross-gradient direction; and 100 feet in the downgradient direction and (petroleum hydrocarbon COCs) 528 feet in the upgradient direction; 165 feet in the cross-gradient direction if Light, Non-Aqueous Phase Liquid, (LNAPL i.e. floating product) is suspected; 95 feet in the cross-gradient direction if no LNAPL is suspected; 100 feet in the downgradient direction (LNAPL suspected); and 30 feet in the downgradient position (LNAPL not suspected).

AEI reviewed potential sources of COCs from the sites reported on the EDR database report and historical document review. Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the sites evaluated were determined to represent VECs at the property.

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to ASTM E1527-13, the following interviews were performed during this assessment in order to obtain information indicating RECs in connection with the subject property.

6.1.1 INTERVIEW WITH OWNER

The subject property owner was not interviewed during this assessment. Based on information obtained from other sources, including the key site manager, this limiting condition is not expected to alter the overall findings of this assessment.

6.1.2 INTERVIEW WITH KEY SITE MANAGER

The key site manager, Ms. Elva Chavez of PS Business Parks, was contacted in person on May 19, 2022. Ms. Elva Chavez has been associated with the subject property since approximately 1992. Ms. Elva Chavez stated that the subject property was developed in 1978-1979 and is currently owned by PS Business Parks. Ms. Chavez stated that the subject property is currently occupied by commercial offices and warehouses. Ms. Chavez was asked if she was aware of any of the following:

	Yes	No
Any knowledge of USTs, clarifiers or oil/water separators, sumps, or other subsurface features.		✔
Any knowledge of previous environmental investigations conducted on site.		✔
Any knowledge of current or past industrial operations and/or other operations which would involve the use of hazardous substances and/or petroleum products.		✔
Any known plans for site redevelopment or change in site use.		✔
Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property.		✔
Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property.		✔
Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.		✔
Any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality.		✔
Comments: Description of/elaborate on any "yes" answers OR delete row		

6.1.3 PAST OWNERS, OPERATORS, AND OCCUPANTS

AEI did not attempt to interview past owners, operators, and occupants of the subject property because information from these sources would likely be duplicative of information already obtained from other sources.

6.1.4 Interview with Others

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this report.

6.2 User Provided Information

User provided information is intended to help identify the possibility of RECs in connection with the subject property. In conformance with ASTM E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the Environmental Professional. The responsibility for qualifying for LLPs by conducting the inquiries ultimately rests with the User, and providing the information to the Environmental Professional would be prudent if such information is available.

The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.

6.2.1 Environmental Liens

In accordance with our approved scope of services, an environmental lien search was not performed as part of this assessment.

6.3 Previous Reports and Other Provided Documentation

No prior reports or other relevant documentation in association with the subject property was made available to AEI during the course of this assessment.

7.0 SITE RECONNAISSANCE

Site Reconnaissance Date	May 19, 2022; June 3, 2022
AEI Site Assessor(s)	Ron Russell
Property Escort(s)/ Relationship(s) to Property	Ms. Elva Chavez/Property Manager - May 19, 2022 Maintenance Manager - June 3, 2022
Units/Areas Observed	AEI observed the interior of the following: 5800 Uplander Way - Office 5801 Uplander Way - La Chapelle Construction 5803 Uplander Way - Patio Cafe 5817 Uplander Way - ISPB 5847 Uplander Way - Office 5860 Uplander Way - Office 5751 Uplander Way - Looking Glass Childrens Svcs 5753 Uplander Way - Elite Money Matters 5759 Uplander Way - Ortho Engineering 5765 Uplander Way - Parallax Assoc. 5860 Hannum Avenue - Mastery in Transformational Training Unit 150 Unit 203 AEI observed the exterior and grounds of the subject property.
Area(s) not accessed and reason(s)	Due to the large volume of materials within portions of the building and vehicles parked within exterior areas, direct visual observation of many of the floor and wall areas of the building and exterior ground surfaces was not possible. Features may be present that were not observed during AEI's field reconnaissance. Based on the quality of information obtained from other sources, this limitation is not expected to alter the overall findings of this assessment. Refer to Section 1.5 for discussion of limiting condition(s).
Other Physical Constraints	None

7.1 SUBJECT PROPERTY RECONNAISSANCE FINDINGS

Feature	Observed on Subject Property
Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use	
Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)	
Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use	
Unidentified Substance Containers	
Electrical or Mechanical Equipment Likely to Contain Fluids	✔
Interior Stains or Corrosion	
Strong, Pungent, or Noxious Odors	

Feature	Observed on Subject Property
Pools of Liquid	
Drains, Sumps, and Clarifiers	
Pits, Ponds, and Lagoons	
Stained Soil or Pavement	
Stressed Vegetation	
Solid Waste Disposal or Evidence of Fill Materials	
Waste Water Discharges	
Wells	
Septic Systems	
Biomedical Wastes	
Dry Cleaners	
Other	✔

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.1.1 Electrical or Mechanical Equipment Likely to Contain Fluids

Toxic PCBs were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing." Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformers

Type	Quantity	Owner	Presumed Date of Installation	Spills or Stains Observed (Yes/No)	Non-PCB Label (Yes/ No)
Pad-Mounted	Four	Southern California Edison (SCE)	Unknown	No	No

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

Transformers installed prior to 1977 may be PCB containing while transformers installed after 1977 are unlikely to be PCB containing. Federal Regulations (40 CFR 761 Subpart G) require any release of material containing >50 ppm PCB and occurring after May 4, 1987, be cleaned up by the transformer owner following the United States EPA's PCB spill cleanup policy.

AEI did not observe evidence of spills, staining, or leaks on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

Elevators

The subject property building at 5800 Hannum Avenue is equipped with a 4,000-pound hydraulic elevator. Based on the age of the building (post-1978), it is unlikely that the hydraulic fluid within the equipment contains PCBs. The equipment for the elevator is located in the lobby of the building. No evidence of stains or leaks was observed at the base of the equipment during the site reconnaissance. Based on the good condition and regular maintenance of the elevator, it is not expected to represent a significant environmental concern.

7.1.2 OTHER

The business at 5815 Uplander Way uses photo chemicals and the business at 5830 Hannum Avenue stores ballast (universal waste).

7.2 ADJOINING PROPERTY RECONNAISSANCE FINDINGS

Feature	Observed on Adjoining Property
Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use	
Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)	
Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use	
Unidentified Substance Containers	
Electrical or Mechanical Equipment Likely to Contain Fluids	✔
Interior Stains or Corrosion	
Strong, Pungent, or Noxious Odors	
Pools of Liquid	
Drains, Sumps, and Clarifiers	
Pits, Ponds, and Lagoons	
Stained Soil or Pavement	
Stressed Vegetation	
Solid Waste Disposal or Evidence of Fill Materials	
Waste Water Discharges	
Wells	
Septic Systems	
Biomedical Wastes	
Dry Cleaners	
Other	

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.2.1 ELECTRICAL OR MECHANICAL EQUIPMENT LIKELY TO CONTAIN FLUIDS

Transformer(s)

Multiple pad-mounted transformers were observed on the adjoining sites during the site reconnaissance. No spills, staining, or leaks were observed on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

8.0 NON-ASTM SERVICES

8.1 ASBESTOS-CONTAINING BUILDING MATERIALS

Asbestos is the name for a group of naturally occurring silicate minerals that can be separated into fibers. The fibers are strong, durable, and resistant to heat and fire. They are also long, thin and flexible, so they can even be woven into cloth. Because of these qualities, asbestos has been used in thousands of consumer, industrial, maritime, automotive, scientific and building products. During the 20th century, some 30 million tons of asbestos have been used in industrial sites, homes, schools, shipyards and commercial buildings in the United States. Commercial use of ACM began in the early 1900s and peaked in the period between 1940 and into the 1970's. Common ACMs include pipe-covering, insulating cement, insulating block, refactory and boiler insulation materials, transite board, fireproofing spray, joint compound, vinyl floor tile, ceiling tile, mastics, roofing products, and duct insulation for HVAC applications. Inhalation of asbestos fibers can result in deleterious health effects.

The potential for ACM was evaluated based the United States EPA Guidance Document: *Managing Asbestos in Place - A Building Owner's Guide to Operations and Maintenance Programs for Asbestos-Containing Materials* ("Green Book"). In 1973, NESHAPS banned the use of most spray-applied surfacing ACM, specifically asbestos containing spray-on fireproofing and insulation. Subsequent revisions to this regulation in 1975 and 1978 effectively eliminated the use of friable pre-molded pipe, boiler, turbine, and duct insulation; and the spray application of friable asbestos-containing materials for all uses in buildings. In 1989, the EPA issued regulations to ban some asbestos-containing products and phase out most others over a multi-year period. The "Ban and Phase-Down" rule was challenged in court and the regulation remanded to the agency. As a result, any asbestos-containing products then "in commerce" would not be banned. Those not in commerce would be banned. Those materials "banned" could not be sold. It did not affect such materials already installed, or in use. Most United States firms voluntarily ceased production of asbestos containing building materials not covered by the aforementioned Federal bans by the mid-1980s. In 1994, the OSHA determined that employers and building owners are required to treat installed thermal system installation and sprayed on and troweled-on surfacing materials, as well as vinyl or asphalt flooring material, as ACM in buildings constructed no later than 1980 until tested by laboratory analysis to prove otherwise.

The information below is for general informational purposes only and does not constitute an asbestos survey. In addition, the information is not intended to comply with federal, state or local regulations in regards to ACM.

Based on the Green Book, the Ban and Phase-Down rule and the 1978-1979 date of construction, building materials may contain asbestos. According to the EPA, while suspect or ACM may be managed in place under an operations and maintenance program, sampling would be required to document the presence or absence of asbestos containing material. A summary of suspect or presume ACM is provided below.

Material	Location	Estimated Quantity	Friable (Yes/No)	Physical Condition	Action
Ceiling tiles	Interior	Typical room size	No	Good	No

Based on the age of the buildings, asbestos may be present in the building material. Building materials were in good condition and can be effectively managed as part of an asbestos O&M Plan until such time as renovation or demolition activities necessitate their removal. An O&M Plan was not in place at the subject property.

8.2 LEAD-BASED PAINT

Lead-based Paint (LBP) is defined as any paint, varnish, stain, or other applied coating that has ≥1 mg/cm² (5,000 µg/g or 5,000 ppm) or more of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm² to 2.0 mg/cm². Section 1017 of the Housing and Urban Development (HUD) Guidelines, Residential Lead-Based Paint Hazard Reduction Act of 1992, otherwise known as "Title X," defines a LBP hazard as "any condition that causes exposure to lead that would result in adverse human health effects" resulting from lead-contaminated dust, bare, lead-contaminated soil, and/or lead-contaminated paint that is deteriorated or present on accessible, friction, or impact surfaces. Therefore, under Title X, intact LBP on most walls and ceilings would not be considered a "hazard," although the paint should be maintained and its condition monitored to ensure that it does not deteriorate and become a hazard. Additionally, Section 1018 of this law directed HUD and EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978. Most private housing, public housing, or federally owned or subsidized housing is affected by this rule.

LBP is defined as any paint with any detectable amount of lead present in it. It is important to note that LBP may create a lead hazard when being removed. The condition of these materials must be monitored when they are being disturbed. In the event LBP is subject to abrading, sanding, torching, and/or cutting during demolition or renovation activities, there may be regulatory issues that must be addressed.

The information below is for general informational purposes only and does not constitute a lead hazard evaluation. In addition, the information is not intended to comply with federal, state, or local regulations in regards to LBP.

In buildings constructed after 1978, it is unlikely that LBP is present. Structures built prior to 1978 and especially prior to the 1960s should be expected to contain LBP.

Due to the date of construction (post-1978), LBP is not likely to be present. All painted surfaces were observed to be in good condition with no chalking, peeling or flaking.

8.3 RADON

Radon is a naturally-occurring, odorless, and invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

The United States EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three radon zones, with Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action Limit of 4.0 pCi/L. It is important to note that the EPA has found homes with elevated levels of radon in all three

zones, and the EPA recommends site specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not requested as part of this assessment. According to the US EPA, the radon zone level for the area is Zone 2, which has a predicted average indoor screening level between 2 pCi/L and 4 pCi/L, equal to or below the action level of 4 pCi/L set forth by the US EPA.

8.4 Drinking Water Quality

The Metropolitan Water District supplies potable water to the subject property. The most recent water quality report (2022) states that the 90th percentile value for lead levels in samples obtained from the area's water supply was non-detect. Zero samples out of a total of six samples had lead levels exceeding the regulatory action level. Typical sources of lead in drinking water include corrosion of household plumbing systems. Overall, lead levels are well within standards established by the United States EPA.

8.5 Mold

Molds are simple microscopic organisms which can often be seen in the form of discoloration, frequently green, gray, white, brown, or black. When excessive moisture or water accumulates indoors, mold growth may occur, particularly if the moisture problem remains undiscovered or unaddressed. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials, including drywall, wallpaper, baseboards, wood framing, insulation, and carpeting, often play host to such growth. Mold spores primarily cause health problems through the inhalation of spores or the toxins they emit when they are present in large numbers. This can occur when there is active mold growth within places where people live or work.

Mold, if present, may or may not visually manifest itself. Neither the individual completing this inspection, nor AEI has any liability for the identification of mold-related concerns except as defined in applicable industry standards. In short, this Phase I ESA should not be construed as a mold survey or inspection.

This activity was not designed to discover all areas which may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication if significant (based on observed areas) mold growth is present at the subject property. Potential areas of mold growth, such as in pipe chases, HVAC systems, and behind enclosed walls and ceilings, were not observed as part of this limited assessment.

AEI observed interior areas of the subject property buildings to identify the potential presence of mold. AEI did not note obvious visual or olfactory indications of the presence of mold, nor did AEI observe obvious indications of significant water damage. As such, no bulk sampling of suspect surfaces was conducted as part of this assessment and no additional action with respect to suspect mold appears to be warranted at this time.

9.0 FINDINGS, CONCLUSIONS, AND RECOMMENDATIONS

9.1 FINDINGS

9.1.1 RECOGNIZED ENVIRONMENTAL CONDITION

Recognized Environmental Condition (REC) is defined by the ASTM Standard Practice E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

This assessment has revealed no evidence of RECs in connection with the subject property.

9.1.2 CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

Controlled Recognized Environmental Condition (CREC) is defined by the ASTM Standard Practice E1527-13 as a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

This assessment has revealed no evidence of CRECs in connection with the subject property.

9.1.3 HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

Historical Recognized Environmental Condition (HREC) is defined by the ASTM Standard Practice E1527-13 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

This assessment has revealed no evidence of HRECs in connection with the subject property.

9.1.4 OTHER ENVIRONMENTAL CONSIDERATIONS (NON-ASTM SCOPE)

Other Environmental Considerations include, but are not limited to, de minimis conditions and/ or business environmental risks such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in the ASTM Standard. These may also affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

This assessment has revealed no related conditions of concern in connection with the subject property, except for the following:

- Asbestos - Based on the age of the buildings, asbestos may be present in the building material. Given the good condition of the suspect ACM, these materials can be effectively managed as part of an Asbestos O&M Plan until such time as renovation or demolition activities necessitate their removal. The objective of an O&M Plan is to implement a practical management approach to controlling identified ACM within the subject property. The O&M Plan is designed to cleanup existing contamination, minimize future fiber release by controlling disturbance of ACM, and monitor the condition of the ACM until it is removed. An O&M Plan was not in place at the subject property.

9.2 CONCLUSIONS

AEI has performed a Phase I ESA in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) of 5751-5769 Uplander Way; 5801-5819 Uplander Way; 5834A-5859 Uplander Way; 5800-5860 Hannum Avenue, Culver City, Los Angeles County, California, the *subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

This assessment has revealed no evidence of Recognized Environmental Conditions (RECs) or Controlled Recognized Environmental Conditions (CRECs) in connection with the subject property.

Other Environmental Considerations include, but are not limited to, de minimis conditions and/ or business environmental risks such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in the ASTM Standard. These may also affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

This assessment has revealed no evidence of related conditions of concern in connection with the subject property, except for the following:

- Asbestos - Based on the age of the buildings, asbestos may be present in the building material. Given the good condition of the suspect ACM, these materials can be effectively managed as part of an Asbestos O&M Plan until such time as renovation or demolition activities necessitate their removal. The objective of an O&M Plan is to implement a practical management approach to controlling identified ACM within the subject property. The O&M Plan is designed to cleanup existing contamination, minimize future fiber release by controlling disturbance of ACM, and monitor the condition of the ACM until it is removed. An O&M Plan was not in place at the subject property.
-

9.3 RECOMMENDATIONS

Based on this assessment, AEI recommends the following:

- Based the good condition of the suspect ACM, these materials can be effectively managed in place as part of an Asbestos O&M Plan. An Asbestos O&M Plan should be developed and implemented at the property.

10.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR Part 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/25/2022 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/28/2022 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/28/2022 has revealed that there are 9 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/24/2022 has revealed that there are 8 ENVIROSTOR sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 5 LUST sites within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there is 1 CPS-SLIC site within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 5 UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 5 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/28/2022 has revealed that there are 54 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

LOS ANGELES CO LF METHANE: This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

A review of the LOS ANGELES CO LF METHANE list, as provided by EDR, and dated 01/10/2022 has revealed that there is 1 LOS ANGELES CO LF METHANE site within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

Violation Date:	05-31-2017
Citation:	HSC 6.5 25244.19 - California Health and Safety Code, Chapter 6.5, Section(s) 25244.19
Violation Description:	Failure of a generator to conduct, when required, a source reduction evaluation review and plan every four years, and/or failure of the review and plan to contain all required information.
Violation Notes:	Returned to compliance on 06/14/2017. OBSERVATION: 1-55 G DM; 2-1 acid waste in HW storage room and lead testing lab unlabeled and 2-55 G DM with hazardous waste labels missing the accumulation start dates. All hazardous waste containers shall be marked with the following information: 1) the words Hazardous Waste ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information. Note: Hazardous waste containers were labeled at the end of the inspection.

Site Name:	Patriot Environmental LAboratory Services, Inc.
Violation Date:	05-31-2017
Citation:	22 CCR 23 66273.40(a)(3) - California Code of Regulations, Title 22, Chapter 23, Section(s) 66273.40(a)(3)
Violation Description:	Failure of the universal waste handler who sends electronic devices, CRTs, and/or CRT glass to any foreign destination to complete the following: (1) Notify the Department 60 days prior to the intended export before any electronic devices, CRTs, and/or CRT glass are scheduled to leave the United States and cover all export activities extending over the next twelve (12) month or lesser period; (2) Concurrently send a copy of the notification required pursuant to subsection of this section, to the CUPA having jurisdiction over the universal waste handler s facility.

PATRIOT ENVIRONMENTAL LABORATORY SERVICES, INC. (Continued) **S123533068**

Violation Notes: Returned to compliance on 06/14/2017. OBSERVATION: Copies of hazardous waste disposal records for 2017 were not found on site. Hazardous waste generators shall retain copies of all manifests signed off by the disposal facility and all receipts used in a consolidated manifesting procedure on site for three years and have them readily available for review. CORRECTIVE ACTION: Immediately locate a copy of all manifests and receipts for the last three years, maintain them on site, and submit copies to the CUPA by [date, 30 days from now].
