Attachment No. 8

technical memorandum

date	October 27, 2021
to	City of Culver City
from	Jay Ziff Jacqueline De La Rocha
subject	Class 32 Categorical Exemption for the Wende Comprehensive Plan Amendment Project

Introduction

ESA has prepared this memorandum to assist the City of Culver City in their assessment of the potential for environmental effects associated with the Wende Comprehensive Plan Amendment Project as it relates to Phase Two and Phase Three of the Wende Comprehensive Plan (Project), pursuant to the California Environmental Quality Act (CEQA). The assessment below is based on supporting technical studies and other information prepared for the Project, that were peer reviewed by ESA. Based on our review, we believe the Project (described in more detail below) qualifies under CEQA for a Class 32 (Infill Development) Categorical Exemption, that it would not have a significant effect on the environment, and it should therefore be found exempt from review under CEQA.

Project Description

The Project proposes an amendment to the Wende Comprehensive Plan, expanding the Wende Comprehensive Plan area to consist of 49,572 square feet (sf) (22 lots) (Project Site). The Wende Comprehensive Plan includes three phases (i.e., Phase One, Phase Two, and Phase Three), as described further below. As noted above, the Project, which would amend the Wende Comprehensive Plan, consists of Phase Two and Three of the Wende Comprehensive Plan. **Figure 1, Regional Location and Project Location**, provides the boundaries of the Project Site.

Phase One, which is already completed and is not part of the Project, includes Lots 14-30 (approximately 38,305 sf). Phase One involved the adaptive reuse of an existing 13,073 sf Armory building located at 10808 Culver Boulevard which is currently used as a museum, offices, storage, permanent and temporary exhibition space, and event space (the "Museum"). The existing garden at the Museum is used for film screenings, health and wellness classes, gatherings, music and dance performances, museum installations, family day activities, art lessons, exercise and aerobics, gardening and landscaping, demonstrations, readings, lectures, presentations, breakfasts, lunches and dinners, coffee and tea, convening, conferences, and other activities related to a cultural center in the garden, including use of amplified sound. The Museum is served by 305 existing parking spaces. Phase One also included the redevelopment of parking spaces into a sculpture garden. Phase One is noted herein for informational purposes.

Phase Two consists of the redevelopment of 6,760 sf of the Project Site, currently developed with an existing 2,200 sf two-story building and an existing 1,920 sf A-Frame building. Phase Two involves the development of a Creative Community Center (CCC) through the demolition of the 2,200 sf building, the adaptive re-use of the 1,920 sf building and construction of 5,102 sf of new development. The new 7,022 sf CCC would contain a theater/multipurpose space in the A-Frame portion, along with a multi-purpose space, classrooms, a demonstration garden, meeting rooms, offices and ancillary spaces. Phase Two also includes street level landscaping and sculpture, along with a rooftop garden. The existing garden at the Museum would be expanded to establish continuity between the new development and the existing Museum and sculpture garden. The size and nature of the events held in the garden will remain unchanged. Phase Two contains 2,719 sf of hardscape and 1,466 sf of landscaping. Some of the Museum's existing functions, such as offices and event space would be moved to the CCC. The Museum would hire a full-time Program Coordinator to ensure that major events never occur concurrently at the Museum and at the CCC. Phase Two would be served by 305 parking spaces.

Phase Three is a City initiated project consisting of the development of 4,507 sf of the Project Site, currently being used as a community garden. Phase Three involves the development of up to six affordable housing units and redevelopment of the community garden. Upon completion of Phase Three, the Wende Comprehensive Plan would be served by 284 parking spaces, as 21 existing parking spaces will be repurposed as community garden space.

Figure 2, Site Plan and Ground Floor Plan, illustrates the site plan of the Project.

Construction of the Project is anticipated to begin in January 2022 and conclude in the last quarter of 2022. The construction period would include demolition and site preparation activities, installation of building foundations and utilities, and installation of landscaping and hardscape elements. Construction activities do not include significant excavation and export of soils. Approximately 2,200 sf of building floor area would be demolished and removed from the Project Site.

Necessary Approvals

Required approvals for the Project would include, but may not be limited to, the following:

- Comprehensive Plan Amendment.
- Demolition Permits to remove the existing on-site structures to allow for construction of the proposed buildings.
- Construction Permits, including building, grading, excavation, foundation, and associated permits.
- Haul Route Permit, as may be required by Culver City.
- Other discretionary and ministerial approvals as needed.

Assessment of Class 32 In-Fill Development Project Exemption

Exemption Criteria

Article 19 of the California Environmental Quality Act (CEQA Guidelines Sections 15300 to 15333), includes a list of classes of projects that have been determined to not have a significant effect on the environment and as a result, are exempt from review under CEQA.

This document demonstrates that the Project, which includes the demolition of the existing buildings on the Project Site as well as the construction of new buildings, qualifies for an exemption under CEQA Guidelines Section 15332, In-Fill Development Projects, as a Class 32 project that meets the following conditions:

a. The project is consistent with the applicable general plan designation and all applicable general plan policies as well as with applicable zoning designation and regulations.

b. The proposed development occurs within city limits on a project site of no more than five acres substantially surrounded by urban uses.

c. The project site has no value as habitat for endangered, rare or threatened species.

d. Approval of the project would not result in any significant effects relating to traffic, noise, air quality, or water quality.

e. The site can be adequately served by all required utilities and public services.

The analysis below describes the Project's consistency with the applicable Class 32 exemption criteria.

Criterion (a): The project is consistent with the applicable general plan designation and all applicable general plan policies as well as with applicable zoning designation and regulations.

The Project Site is located in Culver City along Culver Boulevard. The General Plan designation for the Project Site is Open Space. The Open Space designation was "established to protect Culver City's open space resources that include public or private land. It is designed and intended to preserve existing and encourage future parks, open space and recreation opportunities." The Project Site is also zoned Open Space (OS); this zoning designation's purpose is to "Regulate, protect, and preserve publicly accessible land that is well suited for active recreation, amusement, relaxation, and/or scenic viewing." (Culver City Municipal Code (CCMC) Section 17.250.030(A)(1).) This zoning was established by City Ordinance in 2014; the City Council simultaneously approved a Comprehensive Plan, CP P-2013176, which includes "use of the AmVets Post II property as an events center and cultural institution facility."

Phase Two of the Project would demolish an existing 2,200 sf building and renovate an existing 1,920 sf A-Frame building to serve as a community resource and expand that structure by 5,102 sf to create the CCC. Phase Three of the Project would construct up to six units of affordable housing on property neighboring Phase Two. The Project would establish a publicly accessible cultural institution that would offer learning, networking, volunteering and cultural opportunities. The Project would incorporate an auditorium for live performance and literary events, rooms for dance class and art instruction, a demonstration garden, skill-sharing and resource exchange areas, meeting rooms, tutorial offices, dedicated places for hands-on learning opportunities and exhibition spaces. It would also incorporate a classroom for use by Culver City School District, a rooftop garden to be maintained in partnership with Upward Bound House, and guaranteed space for both the Mayme A. Clayton Library and Museum and community organizations. In addition, the OS zone allows for the proposed affordable housing units in a mixed-use development, as is proposed in Phase Three.

Criterion (b): The proposed development occurs within city limits on a project site of no more than five acres substantially surrounded by urban uses.

The Project renovation, expansion, and construction would all take place entirely within Culver City limits. The Project Site is substantially surrounded by urban uses, as shown in **Figure 1**, above. To the east, across Coombs Avenue, is the Culver City Veterans Memorial Park. Residential uses are located immediately to the south, north (across Culver Boulevard), and west (across Elenda Street). Residential uses are a qualified urban use as defined by the Public Resources Code. As shown in **Figure 2**, the Project Site is approximately 49,572 sf, less than five acres. The majority of the Project Site would not be changed by the Project.

Criterion (c): The project site has no value as habitat for endangered, rare or threatened species.

The Project renovation, expansion, and construction would redevelop land that is currently developed with urban uses. Existing photos of the Project Site are provided in the Phase I Environmental Site Assessment Report (Phase I ESA) prepared for the Project by Geocon West, Inc. (September 2021), included as Attachment A of this memorandum. The Project Site is not currently a habitat for endangered, rare, or threatened species, and no documentation exists which identifies the Project Site as such. Accordingly, the Project has no potential to encroach on any habitat for endangered, rare or threatened species.

Criterion (d): Approval of the project would not result in any significant effects relating to traffic, noise, air quality, or water quality.

Traffic

The following analysis of potential transportation impacts is based in part on the 10876 Culver Boulevard Comprehensive Plan Modification Transportation Analysis (Transportation Assessment) prepared by Crain & Associates (October 2021), provided in Attachment B of this memorandum. The Transportation Assessment evaluates the potential transportation impacts associated with development of the Project. The findings of the Transportation Assessment that apply to the transportation related questions included in Appendix G of the CEQA Guidelines, are summarized below.

- **Conflict with program plan, ordinance or policy addressing the circulation system, including transit, roadways, bicycles, and pedestrian facilities?**
  - Relevant City plans, ordinances, and policies include the Culver City Traffic Code, Chapter 7.05; the policies of the General Plan Circulation Element; the policies and objectives of the General Land Use Element; Neighborhood Traffic Management Program; goals, objectives and policies of the Short-Range Transit Plan; actions of the Bicycle and Pedestrian Action Plan; policies of the Complete Streets Policy; and the Local Roadway Safety Plan. As evaluated on pages 4 through 7 of the Transportation Assessment, due to limited trip generation and based on an assessment of other areas of potential concern related to circulation and parking, a transportation impact analysis is not required for the Project based on the City's Transportation Study Criteria and Guidelines (July 2020).[1] Furthermore, regarding vehicle parking, the reduction of 21 parking spaces associated with the Project would not cause a deficit in parking supply that would impede the ability of patrons, employees, and residents to find available parking. The Transportation Assessment concluded that the Project would not result in a substantial number of new vehicle trips or changes to existing access that would conflict with any of the City's programs, plans, ordinances, or policies addressing the circulation system. *Impacts would be less than significant.*

[1] https://www.culvercity.org/files/assets/public/documents/public-works/mobility/transportation-study-criteria-and-guidelines.pdf

- **Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?**
  - The City's Transportation Study Criteria and Guidelines establishes vehicle miles traveled (VMT) thresholds and screening criteria for use in evaluating transportation impacts pursuant to CEQA Guidelines Section 150064.3, subdivision (b). The Project would meet screening criterion 1, which states that small projects that result in less than 250 daily vehicle trips would result in a less than significant impact with respect to VMT. The analysis of Project vehicle trip generation is provided on page 5 of the Transportation Assessment, and concludes that the Project would generate a maximum of 72 daily vehicle trips. *Impacts would be less than significant.*

- **Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?**
  - As discussed further on pages 5 and 6 of the Transportation Assessment, the Project would not construct any new driveways or otherwise modify existing access to the Project Site. The Project is not anticipated to generate a substantial number of new peak hour vehicle trips (i.e., 11 or fewer vehicle trips in either peak hour), and so traffic generated by the Project would not interfere with the flow of traffic on adjacent roadways or driveways. Therefore, development of the Project would not substantially increase hazards due to a geometric design feature or incompatible uses. *Impacts would be less than significant.*

- **Result in inadequate emergency access?**
  - As noted above, the Project would not construct any new driveways or otherwise modify existing access to the Project Site. For this reason, emergency access during Project operation would remain unchanged from existing conditions. Future building configurations would comply with applicable fire code requirements for emergency evacuation, including proper emergency exits for patrons, employees, and residents. During Project construction, the majority of construction activities would be confined on-site, construction activities may temporarily affect access on portions of adjacent streets during certain periods of the day, including during construction of potential off-site infrastructure upgrades/improvements (i.e., water and sewer lines). As provided above in the Necessary Approvals subsection of this memorandum, the Project would be required to obtain permits from the City prior to the commencement of construction. These permits, which include designation of a haul route, would ensure that adequate emergency access is maintained during construction. Subject to review and approval of Project Site access and circulation plans by the Culver City Fire Department (CCFD), as necessary, the Project would not result in inadequate emergency access. *Impacts would be less than significant.*

<u>Conclusion:</u> Based on the Transportation Assessment and additional analysis above, the Project would not result in a significant transportation impact pursuant to CEQA. For additional details, refer to the Transportation Assessment provided in Attachment B of this memorandum.

Noise

The following review of potential noise impacts is based on the Noise and Vibration Impacts Assessment for the Wende Museum of the Cold War Project (Noise Assessment) prepared by Terry A. Hayes Associates, Inc. (October 2021), provided in Attachment C of this memorandum. The Noise Assessment evaluates the potential noise and vibration impacts associated with Project construction and operations that have the potential to impact noise sensitive land uses. The findings of the Noise Assessment that apply to the noise related questions included in Appendix G of the CEQA Guidelines are summarized below:

- **Would the Project result in the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?**

- As analyzed on pages 12 through 14 of the Noise Assessment, construction of the Project has the potential to generate an increase in temporary or periodic noise through the use of heavy-duty construction equipment and through vehicle trips generated from construction workers traveling to and from the Project Site. The nearest sensitive receptors to the Project Site are residential uses located across an alley that borders the southern property line. During Phase 2, the existing A-frame building would be adaptively reused, and would shield the residential properties located closest to the Project Site from much of the new construction. During Phase 3, construction activities would be more limited in nature. The residential properties closest to the Project Site have masonry walls approximately 8-feet in height, which, in addition to the alley and other setbacks, would serve to reduce construction noise effects at these properties. Construction activities would also comply with Culver City's allowable construction hours of between 8:00 A.M. and 8:00 P.M. Mondays through Friday, 9:00 A.M. and 7:00 P.M. Saturdays, and 10:00 A.M. and 7:00 P.M. Sundays, and would be temporary in nature. Furthermore, construction noise is exempt per the provisions of Section 9.07.035 of the CCMC as long as construction activities are limited to the allowable hours. *Impacts would be less than significant.*
- As further described on pages 14 through 16 of the Noise Assessment, the Project's noise impacts on offsite noise sensitive residential uses from on-site operational noise sources, including mechanical equipment, outdoor noise, and vehicle trips would not result in significant impacts due to a substantial permanent increase in ambient noise levels in excess of standards. The Project's mechanical equipment would be located on rooftops, screened from view as much as possible, and would be enclosed within a structure which would reduce noise levels. Furthermore, mechanical equipment is regulated by Section 9.04.015 (H)(4) of the CCMC, which prohibits the operation of any mechanical device that would present a loud or unusual noise that disturbs the peace of nearby residences. Under the Project, outdoor noise levels would not materially change from existing conditions, as the size, location and types of outdoor events would be similar to what occurs with current Museum operations. Regarding mobile source noise, as further described in the Noise Assessment, given the low volume of new vehicle trips, the Project would not result in an audible increase in traffic noise. For the reasons stated above, the Project would not result in the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. *Impacts would be less than significant.*

- **Generation of excessive groundborne vibration or groundborne noise levels?**
  - As analyzed on pages 16 through 17 of the Noise Assessment, construction activities would generate vibration from the use of heavy equipment and haul trucks. As further evaluated in the Noise Assessment, the vibration threshold for structural damage during construction would not be exceeded at the adjacent properties located to the south west of the Project Site. As the Project would not include a significant source of permanent vibration, operation of the Project would not result in vibration levels that would affect nearby sensitive receptors. Therefore, the development of the Project would not generate excessive groundborne vibration or groundborne noise levels. *Impacts would be less than significant.*

- **For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?**
  - As described on page 17 of the Noise Assessment, the Project Site is not located within an airport land use plan or within two miles of an airport. Therefore, the Project would not expose people in the Project vicinity to excessive noise levels from airport use. *No impacts would occur.*

<u>Conclusion:</u> Based on the Noise Assessment, the Project would not result in a significant noise impact pursuant to CEQA. For additional details, refer to the Noise Assessment provided in Attachment C of this memorandum.

Air Quality

The following review of potential air quality impacts is based on the Air Quality Impact Assessment (Air Quality Assessment) prepared by Terry A. Hayes Associates Inc. (June 2021), provided in Attachment D of this memorandum. The Air Quality Assessment evaluates the potential air quality impacts associated with construction activities, mobile sources, building energy demand, and other aspects of Project construction and operations that have the potential to generate criteria air pollutant emissions. The findings of the Air Quality Assessment that apply to the air quality related questions included Appendix G of the CEQA Guidelines are summarized below.

- **Conflict with or obstruct implementation of the applicable air quality plan?**
  - As analyzed on pages 12 through 15 of the Air Quality Assessment, in response to Criterion 1, the Project would not increase the frequency or severity of an existing violation or cause or contribute to new violations for ozone. In addition, in response to Criterion 2, the Project incorporates into its design appropriate control strategies set forth in the 2016 Air Quality Management Plan (AQMP) for achieving its emission reduction goals, and would be consistent with the demographic and economic assumptions upon which the plan is based. Furthermore, the Project would be consistent with and not conflict with the General Plan. Based on the analysis provided in the Air Quality Assessment, the Project would not conflict with or obstruct implementation of applicable air quality plans. *Impacts would be less than significant.*

- **Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?**
  - Construction of the Project has the potential to create air quality impacts through the use of heavy-duty construction equipment and through vehicle trips generated from construction workers traveling to and from the Project Site. In addition, fugitive dust emissions would result from grading and construction activities. However, compliance with South Coast Air Quality Management District (SCAQMD) Rule 403 requirements (Control of Fugitive Dust) such as frequent watering (at least three times daily) and track out prevention measures fugitive VOC control measures required to be implemented by architectural coating emission factors based on SCAQMD Rule 1113 (Architectural Coatings). As analyzed further on pages 13 to 14 of the Air Quality Assessment, construction-related daily emissions would not exceed the SCAQMD numeric indicators of significance and emissions levels would be below the applicable numeric indicators. As it relates to operational emission, and as discussed in the Air Quality Assessment, operational criteria pollutant emissions were calculated for mobile, area, and energy sources for the Project operational year. Operations would adhere to the applicable codes including 2019 Title 24 Green Building Code. Operational emission estimates include compliance with SCAQMD Rule 1113 (Architectural Coatings), which limits the VOC content of architectural coatings to 50 grams per liter for building envelope coatings. The Project's operational-related daily emissions would not exceed the SCAQMD numeric indicators for any criteria pollutants. Based on the above, development of the Project would not result in cumulative considerable net increase of any criteria pollutant. *Impacts would be less than significant.*

- **Expose sensitive receptors to substantial pollutant concentrations?**
  - As analyzed on page 17 of the Air Quality Assessment, localized construction emissions would not exceed the SCAQMD localized significance thresholds. The Project would comply with regulatory control measures including the California Air Resources Board (CARB) Air Toxics Control Measure that limits diesel powered equipment and vehicle idling to no more than five minutes at a location, and would comply with CARB's In-Use Off-Road Diesel Vehicle Regulation that requires fleets to retire, replace, or repower of older, dirtier engines with newer emission-controlled models. As such compliance with these would minimize emissions of TACs during construction. During operation, localized operational emissions would also not exceed the SCAQMD localized significance thresholds. As discussed in the Air Quality Assessment, toxic or carcinogenic air pollutants are not expected to occur in any substantial amounts in conjunction with operation of the proposed land uses within the Project Site. Based on the uses expected

on the Project Site, potential long-term operational impacts associated with the release of toxic air contaminants (TACs) would be minimal, regulated, and controlled, and would not be expected to exceed the SCAQMD numerical indicator of significance. Therefore, development of the Project would not expose sensitive receptors to substantial pollution concentrations. *Impacts would be less than significant.*

- **Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?**
  - As analyzed on pages 17 in the Air Quality Assessment, during construction, through mandatory compliance with SCAQMD Rules, no construction activities or materials are expected to create objectionable odors affecting a substantial number of people. In addition, as it relates to operation, the Project does not include any uses identified by the SCAQMD as being associated with substantial odors. As a result, the Project is not expected to discharge contaminants into the air in quantities that would cause a nuisance, injury, or annoyance to the public or property pursuant to SCAQMD Rule 402. As such, development of the Project would not result in other emissions adversely affecting a substantial number of people. *Impacts would be less than significant.*

Conclusion: Based on the Air Quality Assessment the Project would not result in a significant air quality impact. For additional details, refer to the Air Quality Assessment provided in Attachment D of this memorandum.

Water Quality

- **Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?**
  - Point-source pollutants are discharged directly from pipes or spills. Raw sewage draining from a pipe directly into a stream is an example of a point-source water pollutant. The Project consists of a development of the CCC, up to six affordable housing units, and associated landscaping, including redevelopment of a community garden. The Project does not propose any uses that would generate point source pollutants. Therefore, water quality impacts due to point sources would be less than significant.

    Non-point-source pollutants (NPS) cannot be traced to a specific original source. NPS pollution is caused by rainfall or snowmelt moving over and through surface areas. As the runoff moves, it picks up and carries away natural and human-made pollutants, finally depositing them into lakes, rivers, wetlands, coastal waters, and even underground sources of drinking water. These pollutants can include: excess fertilizers, herbicides and insecticides from agricultural lands and residential areas; oil, grease, and toxic chemicals from urban runoff and energy production; sediment from improperly managed construction sites, crop and forest lands, and eroding stream banks; salt from irrigation practices and acid drainage from abandoned mines; bacteria and nutrients from livestock, pet wastes, and faulty septic systems; and atmospheric deposition and hydro modification.

    The Project would be subject to all existing regulations associated with the protection of water quality. Construction activities would be carried out in accordance with the requirements of the National Pollutant Discharge Elimination System (NPDES) General Construction Permit issued by the Los Angeles Regional Water Quality Control Board (LARWQCB), as applicable. According to the Soils Engineering Investigation report prepared for the Project by SubSurface Designs Inc. (2020), historic high groundwater is approximately 15 feet to 20 feet below ground surface. Only excavations of 24 inches are required to for support of slabs. Therefore, static groundwater is not anticipated to be encountered.

    The Project would involve grading on a Project Site less than one acre in size. The Project would therefore not be required to submit a Storm Water Pollution Prevention Plan (SWPPP) to the City of Culver City Public Works Department as the Project would disturb less than one acre of soil and is not part of a larger common plan of development which, in total, disturbs one acre or more. However, the Project would

implement best management practices (BMPs) to manage storm water drainage during construction through methods such as retention basins of sufficient size; filtering by use of a barrier system, wattle or other method approved by the enforcing agency prior to being conveyed to a public drainage system; compliance with a lawfully enacted storm water management ordinance in order to avoid discharging pollutants into waterways; or other approved method. Pursuant to the City's Municipal Code 5.05.035, Requirements For Industrial/Commercial and Construction Activities, the Project would submit a local Storm Water Pollution Prevention Plan (SWPPP) and Wet Weather Erosion Control Plan for construction activities consistent with the Municipal NPDES Permit to the City of Culver City Public Works Department. Therefore, development of the Project would not result in any significant effects relating to water quality due to construction activities.

As an urban development with a mix of non-residential and residential uses, operation of the Project would add typical, urban, nonpoint-source pollutants to storm water runoff. These pollutants are permitted by the countywide MS4 permit and would not exceed any receiving water limitations. Therefore, operation of the Project would not violate any water quality standards or waste discharge requirements and would have no related significant impacts. Impacts would be less than significant.

Conclusion: The Project would not result in a significant water quality impact.

Conclusion for Criterion (d)

As the Project would result in less than significant impacts with respect to traffic, noise, air quality, and water quality, the Project would meet this criterion.

Criterion (e): The site can be adequately served by all required utilities and public services.

The Project Site is located in an existing urban area served by existing public utilities and services. A considerable increase in demand for services or utilities is not anticipated with implementation of the Project, since all new construction would take place at a location served by existing public utilities and services. These services include water provided by Golden State Water, electricity provided by Southern California Edison, solid waste collection and sewer services provided by the City of Culver City, and natural gas provided by the Southern California Gas Company. Accordingly, the Project would be adequately served by all required utilities and public services.

Conclusion for Criterion (e)

As the Project would result in less than significant impacts with respect to utilities and public services, the Project would meet this criterion.

Exceptions to Categorical Exemption

CEQA Guidelines Section 15300.2 lists six exceptions to a categorical exemption. These exceptions include the following conditions:

a. Location. Classes 3, 4, 5, 6, and 11 are qualified by consideration of where the project is to be located – a project that is ordinarily insignificant in its impact on the environment may in a particularly sensitive environment be significant. Therefore, these classes are considered to apply in all instances, except where the project may impact on an environmental resource of hazardous or critical concern where designated, precisely mapped, and officially adopted pursuant to law by federal, state, or local agencies.

b. Cumulative Impact. All exemptions for these classes are inapplicable when the cumulative impact of successive projects of the same type in the same place, over time is significant.

c. Significant Effect. A categorical exemption shall not be used for an activity where there is a reasonable possibility that the activity will have a significant effect on the environment due to unusual circumstances.

d. Scenic Highways. A categorical exemption shall not be used for a project which may result in damage to scenic resources, including but not limited to, trees, historic buildings, rock outcroppings, or similar resources, within a highway officially designated as a state scenic highway. This does not apply to improvements which are required as mitigation by an adopted negative declaration or certified EIR.

e. Hazardous Waste Sites. A categorical exemption shall not be used for a project located on a site which is included on any list compiled pursuant to Section 65962.5 of the Government Code.

f. Historical Resources. A categorical exemption shall not be used for a project which may cause a substantial adverse change in the significance of a historical resource.

The analysis below demonstrates that the Project or its circumstances would not result in any exceptions identified in CEQA Guidelines Section 15300.2.

Criterion Section 15300.2(a): Location

Classes 3, 4, 5, 6, and 11 are qualified by consideration of where the project is to be located - a project that is ordinarily insignificant in its impact on the environment may in a particularly sensitive environment be significant. Therefore, these classes are considered to apply in all instances, except where the project may impact on an environmental resource of hazardous or critical concern where designated, precisely mapped, and officially adopted pursuant to law by federal, state, or local agencies.

This exception applies to CEQA exemptions under Classes 3, 4, 5, 6, and 11. This Project qualifies as a Class 32 (Infill Development) Categorical Exemption, and therefore this criterion section is not applicable to this exemption. In addition, the Project Site is located in a previously developed urban infill location surrounded by existing urban uses and is not located in a particularly sensitive environment.

Criterion Section 15300.2(b): Cumulative Impact

All exemptions for these classes are inapplicable when the cumulative impact of successive projects of the same type and in the same place, over time is significant.

As addressed above, technical analysis concluded that the Project would not result in significant noise, air quality, GHG, or traffic impacts. Project construction and operation would take place consistent with an approved Comprehensive Plan, which would limit allowable uses, activities, and future growth at the Project Site. Since the renovation and expansion of the A-Frame building and construction of up to six units of affordable housing would constitute full build out of the Comprehensive Plan, any additional construction and operations which could contribute to cumulative impacts would be prohibited by the terms of the Comprehensive Plan. As all existing and planned facilities at the Project Site would comply with regulatory standards, the Project is not anticipated to contribute to a cumulatively considerable impact. Further, there are no projects proposed of the same type in the same place or in close proximity such that significant cumulative impacts in association with the Project would occur.

Criterion Section 15300.2(c): Significant Effect

A categorical exemption shall not be used for an activity where there is a reasonable possibility that the project will have a significant effect on the environment due to unusual circumstances.

The Project would not result in any significant effects due to unusual circumstances. The Project would renovate an existing 1,920 sf A-Frame building to serve as a community resource, expand that structure by 5,102 sf for a CCC, and construct up to six units of affordable housing on neighboring property. Each of these uses were analyzed individually and collectively to ensure consistency with noise, air quality, GHG, and traffic thresholds, with that research concluding that construction activities and operations would be consistent with the surrounding residential and park uses. Furthermore, the Project would operate on the same days and hours as occurs with the existing Museum. Accordingly, neither the Project Site nor its surrounding uses contain characteristics which would qualify as an unusual circumstance. The Project Site is an infill property with flat topography. No known circumstances at the Project Site or related to its construction or operations create a reasonable possibility of significant effects to the environment. Therefore, the Project would not result in any significant effects due to unusual circumstances.

Criterion Section 15300.2(d): Scenic Highway

A categorical exemption shall not be used for a project which may result in damage to scenic resources, including but not limited to, trees, historic buildings, rock outcroppings or similar resources, within a highway officially designated as a state scenic highway. This does not apply to improvements which are required as mitigation by an adopted negative declaration or certified EIR.

This exception applies to a project which may result in damage to scenic resources, including but not limited to, trees, historic buildings, rock outcroppings, or similar resources, within a highway officially designated as a state scenic highway. The Project would renovate an existing 1,920 sf A-Frame building, expand that structure by 5,102 sf, and construct up to six units of affordable housing on neighboring property. The Project Site is located in an urban environment, and is bordered by Coombs Avenue to the east, Culver Boulevard to the north, and Elenda Street to the west; none of the streets are designated as state scenic highways by the California Department of Transportation's State Scenic Highway Program. According to information on the California Department of Transportation's State Scenic Highway Program, there are no state scenic highways in the vicinity of the Project Site. Therefore, the Project would not damage historic or scenic resources within an officially designated scenic highway.

Criterion Section 15300.2(e): Hazardous Waste Sites

A categorical exemption shall not be used for a project located on a site which is included on any list compiled pursuant to Section 65962.5 of the Government Code.

This exception applies to a project located on a site which is included on any list compiled pursuant to Section 65962.5 of the Government Code. Government Code Section 65962.5 refers specifically to a list of hazardous waste facilities compiled by the Department of Toxic Substances Control (DTSC). The Project Site has already been developed and is not within a designated hazardous site. According to the Phase I ESA, the Project Site is not located on the California Department of Toxic Substances Control's Hazardous Waste and Substances Site List-Site Cleanup (Cortese List). Further, the Project Site is not on the following lists maintained by the State Water Board: Leaking Underground Storage Tank Sites, Solid Waste Disposal Sites, or Active Cease and Desist Orders and Cleanup and Abatement Orders. The Project Site is also not identified on the list of hazardous waste facilities subject to corrective action pursuant to Section 25187.5 of the Health and Safety Code, identified by the Department of Toxic Substances Control.

Criterion Section 15300.2(f): Historical Resources

A categorical exemption shall not be used for a project which may cause a substantial adverse change in the significance of a historical resource.

CEQA Guidelines Section 15300.2 states that a categorical exemption "shall not be used for a project which may cause a substantial adverse change in the significance of a historical resource." A Historical Resources Evaluation was prepared by Architectural Resources Group (September 2019), provided in Attachment E of this memorandum. The Historic Resource Evaluation found that the A-Frame building does not appear to be eligible for listing in the California Register, though it may be individually eligible for listing as a Culver City Cultural Resource at the Recognized level. The Recognized designation is applied to properties determined to be of architectural, historic or cultural interest, but do not rise to the level of eligibility. Accordingly, the renovation of the A-Frame building would preserve a potentially Recognized structure, and the Project would not cause a substantial adverse change in the significance of a historical resource. Furthermore, the Project is not located in close proximity to other historical resources where it would have significant indirect impacts due to adverse effects on their historic setting, views to the resources, or due to construction vibration.[2] Accordingly, the Project would not cause a substantial adverse change in the significance of a historical resource due to indirect impacts.

A Cultural and Paleontological Records Search Memorandum was prepared by Architectural Resources Group (December 2020), provided in Attachment F of this memorandum. The Cultural and Paleontological Records Search Memorandum includes the results of cultural and paleontological resources records searches conducted through the South Central Coastal Information Center (SCCIC), the Native American Heritage Commission (NAHC), and the Natural History Museum of Los Angeles County (NHMLA) for the property at 10858 Culver Boulevard, Culver City, California (Cultural and Paleontological Records Search Memorandum). The record search through the SCCIC, did not identify any known prehistoric or historic archaeological resources on the subject property, nor did it identify any known historic or prehistoric archaeological resources within a 0.25-mile radius of the Project Site. The age of the current development was likely constructed with limited ground disturbance and therefore the Project Site may be potentially sensitive for subsurface archaeological resources. In addition to potentially uncovering historic period archaeological resources, unearthing buried sites related to prehistoric activities in the project are also possible, as the Project Site is located in proximity to resources important to prehistoric peoples and deeply buried sites nearby. It is not known whether the Project Site itself has historic-period archaeological resources or unearthed buried sites related to prehistoric activities. There is no known previous record of such resources on the Project Site. However, should historic-period features be discovered, they may qualify as historical resources under CEQA. The Project consists of ground disturbance and excavation for construction. Therefore, the Project has the potential to unearth, expose, or disturb subsurface archaeological resources, if they are present on the Project Site.

Because of the potential to encounter archaeological resources exists for the Project, the recommended standard City conditions described below ensure that potential impacts to buried archaeological resources and human remains would be less than significant. These conditions described below would be enforceable by the City through standard Conditions of Approval.

- Prior to issuance of demolition permit, the Applicant shall retain a qualified Archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards (Qualified Archaeologist) to oversee an

[2] Based on the records search conducted for the Project, the nearest historic resource is Sony/MGM/Lorimar/Columbia Studios, located nearly a ¼ mile from the Project Site.

archaeological monitor who shall be present during construction excavations such as demolition, clearing/grubbing, grading, trenching, or any other construction excavation activity associated with the project. The frequency of monitoring shall be based on the rate of excavation and grading activities, proximity to known archaeological resources, the materials being excavated (younger alluvium vs. older alluvium), and the depth of excavation, and if found, the abundance and type of archaeological resources encountered, as determined by the Qualified Archaeologist). Full-time field observation can be reduced to part-time inspections or ceased entirely if determined appropriate by the Qualified Archaeologist. Prior to commencement of excavation activities, an Archaeological and Cultural Resources Sensitivity Training shall be given for construction personnel. The training session, shall be carried out by the Qualified Archaeologist and shall focus on how to identify archaeological and cultural resources that may be encountered during earthmoving activities and the procedures to be followed in such an event.

- In the event that historic or prehistoric archaeological resources (e.g., bottles, foundations, refuse dumps, Native American artifacts or features, etc.) are unearthed, ground-disturbing activities shall be halted or diverted away from the vicinity of the find so that the find can be evaluated. An appropriate buffer area shall be established by the Qualified Archaeologist around the find where construction activities shall not be allowed to continue. Work shall be allowed to continue outside of the buffer area. All archaeological resources unearthed by project construction activities shall be evaluated by the Qualified Archaeologist and the Gabrielino Tribe. If the resources are Native American in origin, the Gabrieleno Tribe shall consult with the City and Qualified Archaeologist regarding the treatment and curation of any prehistoric archaeological resources. If a resource is determined by the Qualified Archaeologist to constitute a "historical resource" pursuant to CEQA Guidelines Section 15064.5(a) or a "unique archaeological resource" pursuant to Public Resources Code Section 21083.2(g), the Qualified Archaeologist shall coordinate with the Applicant and the City to develop a formal treatment plan that would serve to reduce impacts to the resources. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources and Public Resources Code Sections 21083.2(b) for unique archaeological resources. The treatment plan shall incorporate the Gabrielino Tribe's treatment and curation recommendations. Preservation in place (i.e., avoidance) is the preferred manner of treatment. If preservation in place is not feasible, treatment may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis. The treatment plan shall include measures regarding the curation of the recovered resources that may include curation at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material and/or the Gabrielino Tribe. If no institution or the Gabrielino Tribe accept the resources, they may be donated to a local school or historical society in the area (such as the Culver City Historical Society) for educational purposes.
- Prior to the release of the grading bond, the Qualified Archaeologist shall prepare a final report and appropriate California Department of Parks and Recreation Site Forms at the conclusion of archaeological monitoring. The report shall include a description of resources unearthed, if any, treatment of the resources, results of the artifact processing, analysis, and research, and evaluation of the resources with respect to the California Register of Historical Resources and CEQA. The report and the Site Forms shall be submitted by the Applicant to the City, the South Central Coastal Information Center, and representatives of other appropriate or concerned agencies to signify the satisfactory completion of the project and required standard Conditions of Approval.
- If human remains are encountered unexpectedly during implementation of the project, State Health and Safety Code Section 7050.5 requires that no further disturbance shall occur until the County Coroner has made the necessary findings as to origin and disposition pursuant to PRC Section 5097.98. If the remains are determined to be of Native American descent, the coroner has 24 hours to notify the Native American Heritage Commission (NAHC). The NAHC shall then identify the person(s) thought to be the Most Likely Descendent (MLD). The MLD may, with the permission of the land owner, or his or her authorized representative, inspect the site of the discovery of the Native American remains and may recommend to the owner or the person responsible for the excavation work means for treating or disposing, with appropriate dignity, the human remains and any

associated grave goods. The MLD shall complete their inspection and make their recommendation within 48 hours of being granted access by the land owner to inspect the discovery. The recommendation may include the scientific removal and nondestructive analysis of human remains and items associated with Native American burials. Upon the discovery of the Native American remains, the landowner shall ensure that the immediate vicinity, according to generally accepted cultural or archaeological standards or practices, where the Native American human remains are located, is not damaged or disturbed by further development activity until the landowner has discussed and conferred with the MLD regarding their recommendations, if applicable, taking into account the possibility of multiple human remains. The landowner shall discuss and confer with the descendants all reasonable options regarding the descendants' preferences for treatment.

- If the NAHC is unable to identify a MLD, or the MLD identified fails to make a recommendation, or the landowner rejects the recommendation of the MLD and the mediation provided for in Subdivision (k) of Section 5097.94, if invoked, fails to provide measures acceptable to the landowner, the landowner or his or her authorized representative shall inter the human remains and items associated with Native American human remains with appropriate dignity on the facility property in a location not subject to further and future subsurface disturbance.

Implementation and adherence to the above City-enforced Conditions of Approval would ensure that potential impacts to buried archaeological resources and human remains would be less than significant.

Summary/Conclusions

A project qualifies for a Class 32 (Infill Development) Categorical Exemption if it is developed on an infill site and meets the five (5) conditions described in this report. Based on the technical analyses above, and consistent with the attached technical reports, the Project meets the criteria for a Class 32 (Infill Development) Categorical Exemption. Furthermore, none of the exceptions to a Class 32 (Infill Development) Categorical Exemption listed in the CEQA Guidelines Section 15300.2 apply to the Project, as supported by the technical analyses provide above. Therefore, based on the analyses and findings presented in this technical memorandum and in the attached technical reports, the Project qualifies for a Class 32 (Infill Development) Categorical Exemption, and can be found exempt from further review under CEQA.

Attention: Todd Tipton

Subject: PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT
10858 AND 10860 CULVER BOULEVARD
CULVER CITY, CALIFORNIA

Mr. Tipton:

In accordance with Geocon West Inc. (Geocon) proposal No. LP-2021-58 dated January 27, 2021, we have performed a Phase I Environmental Site Assessment (ESA) of the property and improvements at 10858 and10860 Culver Boulevard (the Site) in Culver City, California. We performed the Phase I ESA for the City of Culver City (the Client) as part of their due diligence prior to potential conveyance of the Site.

This report summarizes the findings of the Phase I ESA including the potential for recognized environmental conditions in connection with the Site as defined by the ASTM International *Designation E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*.

We appreciate the opportunity to have performed this Phase I ESA for the City of Culver City. Please contact us if you have any questions concerning this report or if we may be of further service.

Sincerely,

GEOCON WEST, INC.

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

1.0 INTRODUCTION

Geocon West, Inc. (Geocon) performed a Phase I Environmental Site Assessment (ESA) of the property and improvements at 10858 and 10860 Culver Boulevard (the Site) in Culver City, California. We performed the Phase I ESA for the City of Culver City (the City, the Client) as part of their due diligence prior to potential conveyance of the Site. This report summarizes the methodology and presents the findings of the Phase I ESA.

1.1 Purpose and Objectives

The purpose of the Phase I ESA was to identify evidence or indications of 'recognized environmental conditions' (REC) as defined by the ASTM International (ASTM) *Designation E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.* Section 1.1.1 of ASTM *Designation E 1527-13* defines an REC as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions." De minimis conditions are those that generally do not present a threat to human health or the environment and that generally would not be the subject of the enforcement action if brought to the attention of appropriate governmental agencies.

ASTM *Designation E1527-13* also defines 'Historical' and 'Controlled' RECs (HREC and CREC, respectively). A 'Historical REC' is defined as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)." A 'Controlled REC' is defined as "a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)." An HREC is not an REC if a property meets current standards for unrestricted residential use. A CREC remains an REC by definition when a property does not meet the unrestricted residential use requirement unconditionally.

We also conducted the Phase I ESA in general accordance with the requirements of 40 Code of Federal Regulations (CFR) Part 312 titled *Standards and Practices for All Appropriate Inquiries,* as required under Sections 101(35)(B)(ii) and (iii) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The purpose of conducting an all appropriate inquiries investigation into the previous ownership and uses of a property is to meet the provisions necessary for the landowner, contiguous property owner, and/or bona fide prospective purchaser to qualify for certain landowner liability protections under CERCLA.

The following principles are an integral part of ASTM *Designation E1527-13*:

- "**Uncertainty Not Eliminated** - No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a property, and this practice recognizes reasonable limits of time and cost."
- "**Not Exhaustive** - All Appropriate Inquiries does not mean an exhaustive assessment of a property. There is a point at which the cost of information obtained or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an environmental site assessment and the reduction of uncertainty about unknown conditions resulting from additional information."
- "**Level of Inquiry is Variable** - Not every property will warrant the same level of assessment. Consistent with good commercial and customary practice, the appropriate level of environmental site assessment will be guided by the type of property subject to assessment, the expertise and risk tolerance of the user, and the information developed in the course of the inquiry."

1.2 Scope of Services

Our Proposal No. LP-2021-58 dated January 27, 2021, describes the scope of services for this Phase I ESA. We performed the services outlined in the proposal with the exception that we did not review Sanborn Fire Insurance Maps (Sanborn maps) as EDR, the provider of Sanborn maps, indicated that Sanborn map coverage does not exist for the Site and vicinity.

The main components of the Phase I ESA and their objectives, as specified by the referenced standards, include the following:

- **Physical Setting:** We reviewed physical setting references to obtain information concerning the topographic, geologic, and hydrogeologic characteristics of the Site and vicinity. Such information may be indicative of the direction and/or extent that a contaminant could migrate in the event of a spill or release.

- **Records Review:** We reviewed publicly available Federal, State, and local regulatory agency records to obtain information that could potentially help identify RECs at or potentially affecting the Site.
- **Site History:** We reviewed historical references to assess the history of previous uses of the Site and surrounding area to identify those that could have led to RECs on or near the Site. Historical sources reviewed included aerial photographs, topographic maps, and city directories. In addition, we conducted interviews with persons who were expected to be reasonably knowledgeable about historical and/or current conditions at and uses of the Site.
- **Site Reconnaissance:** We performed a site reconnaissance to observe site conditions and activities for indications of evidence of RECs. The site reconnaissance was for the Site only. Offsite properties and features were viewed solely from the vantage of the Site and public thoroughfares.

1.3 Report Limitations

We prepared this Phase I ESA report exclusively for the City. The information obtained is only relevant for the dates of the records reviewed and the latest site visit. Therefore, the information contained herein is only valid as of the date of the report and will require an update after 180 days to reflect updated records and another site reconnaissance to assess current site conditions.

The City should recognize that a Phase I ESA is not a comprehensive site characterization and should not be construed as such. The findings and conclusions presented in this report are predicated on the site reconnaissance, information in the specified regulatory records, and information regarding the historical usage of the Site, as presented in this report. The City should also understand that wetlands, asbestos-containing building materials, lead-containing paint, lead in drinking water, radon, mercury related to mining activities, methane, and mold surveys were not included in the scope of services for this Phase I ESA. Assessment for potential naturally-occurring hazards such as asbestos and arsenic also was not included.

Therefore, the report should only be deemed conclusive with respect to the information obtained. No guarantee or warranty of the results of the Phase I ESA is implied within the intent of this report or any subsequent reports, correspondence or consultation, either express or implied. We strove to conduct the services summarized herein in accordance with the local standard of care in the geographic region at the time the services were rendered.

1.4 Data Gaps

A data gap is defined by ASTM *Designation E 1527-13* as “a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information.” Data gaps could include such things as insufficient historical information, the inability to interview persons with direct site knowledge (e.g., the owner(s), past owner(s), tenants, workers, etc.) or the lack of access to all parts of a site during the site reconnaissance.

As indicated in Section 1.2, we did not review Sanborn fire insurance maps because there are none for the Site and vicinity. We do not consider this a significant data gap however, because of other available historical information we reviewed. We identified no data gaps during this Phase I ESA.

2.0 SITE DESCRIPTION

This section describes the location and physical characteristics of the Site including its size and topography, as well as geologic, soil, and hydrologic/hydrogeologic conditions.

2.1 Location and Legal Description

The Site is located at 10858 and 10860 Culver Boulevard in Culver City, California (Figure 1). The Site is in the northern portion of Culver City approximately 3,500 feet east of Interstate 405 (I-405) and approximately 1 mile south of I-10. The Site is in the northeastern quarter of Section 12 of Township 2 South, Range 15 West, San Bernardino Base and Meridian.

The Site is an approximate 0.1-acre portion of the center of the property identified by Los Angeles County assessor parcel number 4210-021-900. A parcel map depicting the Site is in Appendix A.

2.2 Site and Vicinity General Characteristics

The Site is occupied by a vacant building (Figure 2). The surrounding vicinity is largely residential use and the City's community and park facilities.

2.2.1 Topography

The United States Geological Survey's *Beverly Hills, California* topographic map shows the topography of the Site as relatively flat-lying at an approximate elevation of 60 feet above mean sea (USGS, 2018). Regionally, the Site is situated in the northwestern portion of the Los Angeles Basin where the land surface slopes gently downward to the west towards the Pacific Ocean.

2.2.2 Geologic Conditions

We obtained geologic information from a variety of sources including *Geology of California* (Norris and Webb, 1990), *Geologic map of the Beverly Hills and Van Nuys (south 1/2) quadrangles, Los Angeles County, California* (Dibblee and Ehrenspeck, 1991), and the California Geologic Survey's (CGS) Compilation of Quaternary Surficial Deposits webpage (https://maps.conservation.ca.gov/cgs/qsd/app/). Following are summaries of pertinent information obtained.

2.2.2.1 Geomorphic Region

The Site is located in the northern portion of the Los Angeles Basin west of the Baldwin Hills (Norris and Webb, 1990). The Los Angeles Basin is a coastal plain between the Santa Monica Mountains of

the Transverse Ranges geomorphic province to the north, the Peninsular Ranges geomorphic province to the east and south, and the Pacific Ocean to the west. The Los Angeles basin is a deep structural depression filled with both marine and continental sedimentary deposits, which overlies a basement complex of presumably igneous and metamorphic composition (Yerkes, 1965). The central portion of the basin extends to a maximum depth of approximately 32,000 feet. Prominent structural features within the Los Angeles Basin include the central lowland plain, the uplifted Palos Verdes Hills, and a northwest-trending line of low hills and mesas underlain by the Newport-Inglewood Fault Zone including the Baldwin Hills

2.2.2.2 Geologic Formations/Stratigraphy

The referenced geologic maps indicate that the Site is underlain by Holocene alluvial deposits, which generally consist of gravel, sand, and silty-clay from the Santa Monica Mountains (CGS, Dibblee and Ehrenspeck, 1991).

We performed a geotechnical investigation (GI) at 1056 Washington Boulevard, approximately 2,000 southeast of the Site in January 2011, which consisted of advancing five borings to observe, log, and collect soil samples for physical testing (Geocon, 2011). We encountered artificial fill overlaying alluvium. The alluvial deposits encountered in our borings consisted of poorly graded sand, silty sand, sandy silt and clay to the maximum depth explored of 60.5 feet. Conditions at the Site may be somewhat similar as the Site is situated in a similar geologic setting.

2.2.3 Soil Conditions

We also obtained general information concerning surficial soil conditions at and in proximity to the Site from the United States Department of Agriculture – Natural Resources Conservation Service Web Soil Survey (http://websoilsurvey.nrcs.usda.gov/app/HomePage.htm). Web Soil Survey information indicates that surficial onsite soil is composed of the Urban land-Anthraltic Xerorthents, loamy substratum-Grommet complex which is describes as loam to clay loam that is human-transported material over young alluvium derived from sedimentary rock.

2.2.4 Hydrologic and Hydrogeologic Conditions

There are no surface water bodies on the Site. The nearest surface water body is the channelized Balboa Creek approximately 0.5 miles southeast of the Site.

During our January 2011 GI, we encountered groundwater in one boring at a depth of 32.5 feet. To further assess local groundwater conditions, we searched the California State Water Resources Control Board's GeoTracker online data management system (http://geotracker.waterboards.ca.gov) for groundwater information at the nearest facility with a groundwater monitoring array such as leaking underground storage tank (LUST) facilities or other agency-regulated cleanup sites. The nearest such facility is the 76 Station #252994 approximately 1,400 feet northeast of the Site. Depth to groundwater in groundwater monitoring wells at this facility ranged from approximately 34.7 to 40.8 feet with groundwater flow to the southwest in November 2009.

2.3 Current and Planned Uses of the Site

The Site is currently not used for any purpose. The City currently has no planned uses for the Site.

2.4 Descriptions of Structures, Roads, and Other Improvements on the Site

A two-story structure is on the majority of the Site with a single-story structure attached on the eastern side and chain-link fencing surrounding the Site is present. Further description of Site conditions is in Section 6.0.

2.5 Current Uses of Adjoining Properties

The current uses of the adjoining properties include the Wende Museum to the northeast, an alleyway to the southeast, the Culver City Community Garden to the southwest, and a parking lot to the northwest. Further description of the surrounding vicinity of the Site is provided in Section 6.0.

3.0 USER–PROVIDED INFORMATION

This section summarizes information provided by the Client regarding the Site. Glenn Heald with The City completed the user questionnaire (Appendix B).

3.1 Title, Appraisal and Sale Agreement Records

Mr. Heald did not provide a title report, appraisal, or sale agreement for the Site.

3.2 Environmental Liens or Activity and Use Limitations

Mr. Heald indicated that he is not aware of any environmental liens or activity and use limitations for the Site.

3.3 Specialized Knowledge

Mr. Heald indicated that he has no specialized knowledge regarding past or current uses of the Site that could potentially impair or could have impaired the environmental conditions of the Site.

3.4 Commonly Known or Reasonably Ascertainable Information

Mr. Heald indicated that he is not aware of any commonly known or reasonably ascertainable information regarding past or current uses of the Site that could potentially impair, or could have impaired, the environmental conditions of the Site.

3.5 Valuation Reduction for Environmental Issues

Mr. Heald indicated that the value of the Site is not germane.

3.6 Owner, Property Manager, and Occupant Information

We also provided Jason Underhill with the Wende Museum, a representative of the site owner, with an owner/occupant questionnaire regarding their knowledge of the Site and surrounding properties. Information from this questionnaire is summarized in Section 7.0.

3.7 Reason for Performing Phase I ESA

The City requested the Phase I ESA to obtain information regarding the potential for existing hazardous substance and/or petroleum product impacts at the Site as part of their due diligence prior to prior to potential conveyance of the Site.

4.0 RECORDS REVIEW

This section summarizes information we obtained from readily available agency records pertaining to the Site and properties and facilities in the surrounding vicinity.

4.1 Standard Environmental Record Sources

EDR searched federal, state, and local environmental databases for the Site and properties/facilities within one mile of the Site. The following table lists the databases EDR searched, the properties/facilities listed, and the number of properties/facilities listed. Other databases searched that do not list any properties/facilities are not included in the table. A copy of the report *The EDR Radius Map Report with GeoCheck*, dated June 16, 2021, is in Appendix C.

Database	Search Radius (Miles)	Number of Listings

4.1.1 Site

The Site is not listed on any of the databases searched by EDR.

4.1.2 Offsite Properties

Two properties within 1/8 mile of the Site are listed various non-release-related databases[1] and therefore are unlikely to have caused an REC at the Site. One property within 1/4 mile of the Site is listed on a release-related database. Ohmega Technologies at 4031 Elenda Street, approximately 1,250 feet cross-gradient, is identified on the Department of Toxic Substances Control's (DTSC) EnviroStor data management system for a release of "unspecified acid solution, unspecified solvent mixtures, polymeric resin waste, unspecified organic liquid mixture" to an unspecified media. The distance of this facility from the Site and its cross-gradient location indicates that the release is unlikely to have caused an REC at the Site.

[1] "Release" refers to an unauthorized release of a petroleum product or hazardous substance to the environment (i.e., the ground surface, soil, soil vapor, groundwater, or surface water on a property). "Release-related database" refers to databases that provide information regarding an unauthorized release. "Non-release-related database" refers to databases that may report use, storage, or disposal of hazardous substances and/or petroleum products or other environmental conditions but do not report releases of such.

4.2 Orphan Summary

The Orphan Summary identifies facilities that have incomplete address information and therefore could not be accurately plotted by EDR. The Orphan Summary list three facilities with incomplete information that are identified on the California Integrated Water Quality System, Clandestine Drug Labs, and National Pollutant Discharge Elimination System List databases. The listed facilities are unlikely to have caused an REC at the Site.

4.3 Other Environmental Record Sources

4.3.1 GeoTracker and EnviroStor

We reviewed information available on GeoTracker as well as EnviroStor (http://www.envirostor.dtsc.ca.gov/public/) for information regarding documented environmental assessment and cleanup at the Site and/or properties/facilities within 1/4 mile of the Site. No additional information for the Site or information for properties/facilities within 1/4 mile of the Site is available on GeoTracker or EnviroStor.

4.3.2 CalGEM

The California Geologic Energy Management Division's (CalGEM) Well Finder (https://www.conservation.ca.gov/calgem/Pages/WellFinder.aspxt), an online mapping system, shows the nearest oil and/or natural gas well approximately 1,500 feet northeast of the Site. This well is depicted as an idle oil and gas well. The distance of this well from the Site suggests that it would not have caused, or will not cause, an REC at the Site.

4.3.3 Los Angeles County Fire Department

We reviewed the Los Angeles County Fire Department's (LACFD) online Health Hazardous Materials Division Certified Unified Program Agency records for the Site. The LACFD maintains online lists of active and inactive underground storage tanks (UST), aboveground petroleum storage tanks, hazardous materials facilities, and UST historical files. We reviewed these records for documentation pertaining to the Site. We did not identify records on the online lists, therefore, a written request for records was not submitted.

4.3.4 Culver City Department of Building and Safety

Documents available from the Culver City Department of Building and Safety indicate that roof repairs took place at the Site in March of 1984. No other pertinent information was provided by the department.

5.0 HISTORICAL USE

We evaluated the historical use of the Site and adjacent properties through review of aerial photographs and topographic maps, as well as city directories provided by EDR. This section summarizes information obtained from these sources.

5.1 Aerial Photographs

We reviewed historical aerial photographs provided by EDR for the years 1928, 1938, 1947, 1953, 1964, 1977, 1979, 1981, 1989, 1994, 2002, 2005, 2009, 2012 and 2016 (Appendix D) and aerial imagery available on Google Earth from 1985 to 2017 for indications of past land uses that could have potentially impacted the Site through the use, storage, or disposal of hazardous substances and/or petroleum. The following table summarizes our observations of the Site and adjacent properties on the historical aerial photographs.

Year	Observations	
	Site	**Adjacent**
1928 and 1938 (1" = 500')	The northwestern portion of the Site appears to have been developed with a road oriented northeast to southwest. The southeastern portion of the Site appears to have been undeveloped.	Structures and roads were present in all directions within 1/4 mile of the Site. A road was present along the western site boundary. A large multi-structure property was located adjacent to the west of the Site.
1947 (1" = 500')	Conditions were similar to those observed on the 1928 and 1938 photographs.	Conditions were similar to those observed on the 1928 and 1938 photographs except additional structures were present in all directions within 1/4 mile of the Site as well as on the adjoining properties to the east.
1953, 1964, and 1977 (1" = 500')	Conditions were similar to those observed on the 1947 photograph except the southeastern portion of the Site was occupied by two structures.	Conditions were similar to those observed on the 1947 photograph except additional structures were present in all directions within 1/4 mile of the Site as well as on the adjoining properties to the north and south.
1979 and 1981 (1" = 500')	Conditions were similar to those observed on the 1953, 1964, and 1977 photographs.	Conditions were similar to those observed on the 1953, 1964, and 1977 photographs except a large commercial property was redeveloped into single-family homes.
1989 (1" = 500')	Conditions were similar to those observed on the 1979 and 1981 photographs.	Conditions were similar to those observed on the 1979 and 1981 photographs except the road that was previously crossing the Site was moved approximately 75 feet northwest.
1994, 2002, 2005, 2009, 2012, and 2016 (1" = 500')	Conditions were similar to those observed on the 1989 photograph.	Conditions were similar to those observed on the 1989 photograph.

The aerial photographs do not depict any features or land uses that directly suggest the presence of RECs on the Site or adjacent properties.

5.2 Topographic Maps

We reviewed historical topographic maps for the years 1894, 1896, 1898, 1900, 1902, 1920, 1921, 1925, 1930, 1950, 1964, 1972, 1981, 1994, 1995, and 2012 (Appendix E). The following table summarizes our observations of the Site and adjacent properties on the historical topographic maps.

Year	Observations	
	Site	Adjacent
1894, 1896, 1898, 1900, and 1902 (1:62,500)	No structures or land uses are depicted for the Site.	Roads are depicted to the east and north within 1/2 mile of the Site. Structures are depicted south and west within 1/2 mile of the Site.
1920 and 1921 (1:62,500)	Conditions depicted are similar to those on the 1894, 1896, 1898, 1900, and 1902 topographic maps.	Additional roads and structures are depicted in all directions within 1/2 mile of the Site. A railroad is depicted approximately 200 feet west of the Site oriented northeast to southwest.
1925 (1:24,000)	Conditions depicted are similar to those on the 1920 and 1921topographic maps.	Additional roads and structures are depicted in all directions within 1/2 mile of the Site. The railroad is depicted approximately 100 feet west of the Site oriented northeast to southwest.
1930 (1:24,000)	Conditions depicted are similar to those on the 1925 topographic map.	Many additional roads and structures are depicted in all directions within 1/2 mile of the Site. The railroad is depicted on the adjoining property to the west of the Site.
1950 (1:24,000)	Conditions depicted are similar to those on the 1930 topographic map.	The site vicinity in all directions is largely depicted as urbanized by color shading.
1964, 1972, 1981, 1994, and 1995 (1:24,000)	Conditions depicted are similar to those on the 1950 topographic map	Conditions depicted are similar to those on the 1950 topographic map with the exception that after 1972 the railroad is no longer depicted.
2012 (1:24,000)	No structures or land uses are depicted on the Site.	No structures or land uses are depicted on the topographic map.

The topographic maps do not depict any features or land uses that directly suggest the presence of RECs on the Site or adjacent properties.

5.3 City Directories

EDR prepared an abstract of city directories including city, cross reference, and a telephone directory, which are summarized in the *EDR-City Directory Image Report* dated June 16, 2021 for the Site. The directories were reviewed at approximately 5-year intervals, if available, from 1920 to 2014. A copy of the EDR city directory abstract, including information regarding offsite facilities, is in Appendix F.

5.3.1 Site

The city directories list Veterans of Foreign Wars and AMVETS Culver City Post II for the years 1985 through 2014. These listings alone do not suggest the potential to have used, stored, or had a release of hazardous substances or petroleum products.

5.3.2 Adjoining and Adjacent Properties

The city directories list individual homeowners and a few commercial businesses for the adjacent properties. None of the various commercial businesses listed suggest the potential to have had a release or stored or disposed of hazardous substances or petroleum products.

6.0 SITE RECONNAISSANCE

This section summarizes our observations of the Site and surrounding properties made during the site reconnaissance.

6.1 Methodology and Limiting Conditions

Scott Brito, Staff Geologist with Geocon, performed the site reconnaissance accompanied by Jason Underhill, site owner representative from the Wende Museum, on August 24, 2021, by walking throughout the Site to observe site features and conditions. Mr. Brito observed offsite (adjoining and adjacent) properties from the Site and public roads. Weather on the day of the site reconnaissance was sunny with temperatures in the mid-70s°F. Photographs of various site features and offsite properties are appended.

6.2 Site Setting

The Site is situated in an area of predominantly residential (single- and multi-family) and community developments.

6.3 Onsite Survey

6.3.1 Interior Areas

The Site is a vacant two-story structure with attached single-story structure. The interior of the two-story structure is divided into several rooms and restrooms and the other structure is one large room. (Photos 1 through 4). We observed no evidence, or conditions that would suggest the potential presence, of RECs on the Site.

6.3.2 Exterior Areas

The portions of the property not occupied by the structures are developed with chain-link fencing, a mobility ramp, entry stairs, and concrete pavement (Photos 5 and 6). Domestic trash was present throughout the Site. Two intact 55-gallon drums with illegible labels were present (Photo 6). The presence of material within the drums is unknown and no obvious signs of leaks were observed. The unlabeled drums are a potential environmental concern for the Site.

6.4 Offsite Survey

Adjoining and adjacent properties consist of the following development/uses:

- Northeast – the Wende Museum, a cold war museum (Photo 7),
- Southeast –an alleyway beyond which are single-family residences (Photo 8),
- Southwest – the Culver City Community Gardens (Photo 9),
- Northwest – a parking lot for the surrounding community facilities, beyond which is Culver Boulevard. (Photo 10).

We observed no evidence of conditions on adjoining or adjacent properties with the potential to cause, or have caused, an REC at the Site.

7.0 INTERVIEWS

We provided Mr. Underhill with an owner/occupant questionnaire regarding the past and present use of the Site and the potential for impacts related to the use, storage, or disposal of hazardous substances and/or petroleum products on the Site. A copy of the owner/occupant questionnaire is in Appendix G.

Mr. Underhill indicated that they have owned the Site for 1 year, it has been vacant for the last 2 years, and the structure is approximately 80 to 100 years old. Mr. Underhill indicated that the Site was used as a Veterans Affairs meeting hall in 2018 and 2019, but did not know its use prior to that time. Mr. Underhill did not provide any other pertinent information.

8.0 SUMMARY OF FINDINGS

The following table presents a summary of findings and opinions associated with this Phase I ESA of the Site, including known or suspect RECs, HRECs, CRECs, environmental concerns, and de minimis environmental conditions.

Assessment Category	Observed (Y/N)	(REC/ CREC/ HREC/ DM, EC, or None)	Recommended Actions	Report Section(s)
Hazardous Substances/Petroleum Products	N	N	NFA	
Hazardous Wastes	N	N	NFA	
Non-Hazardous Wastes	N	N	NFA	
Aboveground/Underground Storage Tanks	N	N	NFA	
Unidentified Substance Containers	N	N	NFA	
Equipment Potentially Containing PCBs	N	N	NFA	
Wastewater Systems	N	N	NFA	
Evidence of Releases	N	N	NFA	
Pools of Liquid, Pits, Ponds, Lagoons	N	N	NFA	
Wells	N	N	NFA	
Other Site Issues	N	N	NFA	
Nearby Properties	N	N	NFA	
Historical Land Use – Site	N	N	NFA	
Historical Land Use – Nearby Properties	N	N	NFA	

Recommended Action:
NFA = no further action required at this time.
N = none

9.0 CONCLUSIONS AND RECOMMENDATIONS

We have performed a Phase I ESA in general conformance with the scope and limitations of ASTM *Designation E 1527-13* of the property and improvements 10858 and 10860 Culver Boulevard in Culver City, California. Exceptions to, or deletions from, this practice are described in Section 1.4 of this report.

This Phase I ESA identified no RECs in connection with the Site. No further environmental assessment of the Site is warranted at this time.

The contents of the 55-gallon drums should be determined for appropriate offsite disposal.

Based on the age of the structure, surveys for asbestos-containing materials and lead-containing paint should be performed prior to any planned renovation or demolition activities.

Any undocumented USTs, septic systems, water wells, or other subsurface structures encountered at the Site should be properly abandoned in accordance with applicable County permit requirements.

11.0 QUALIFICATIONS

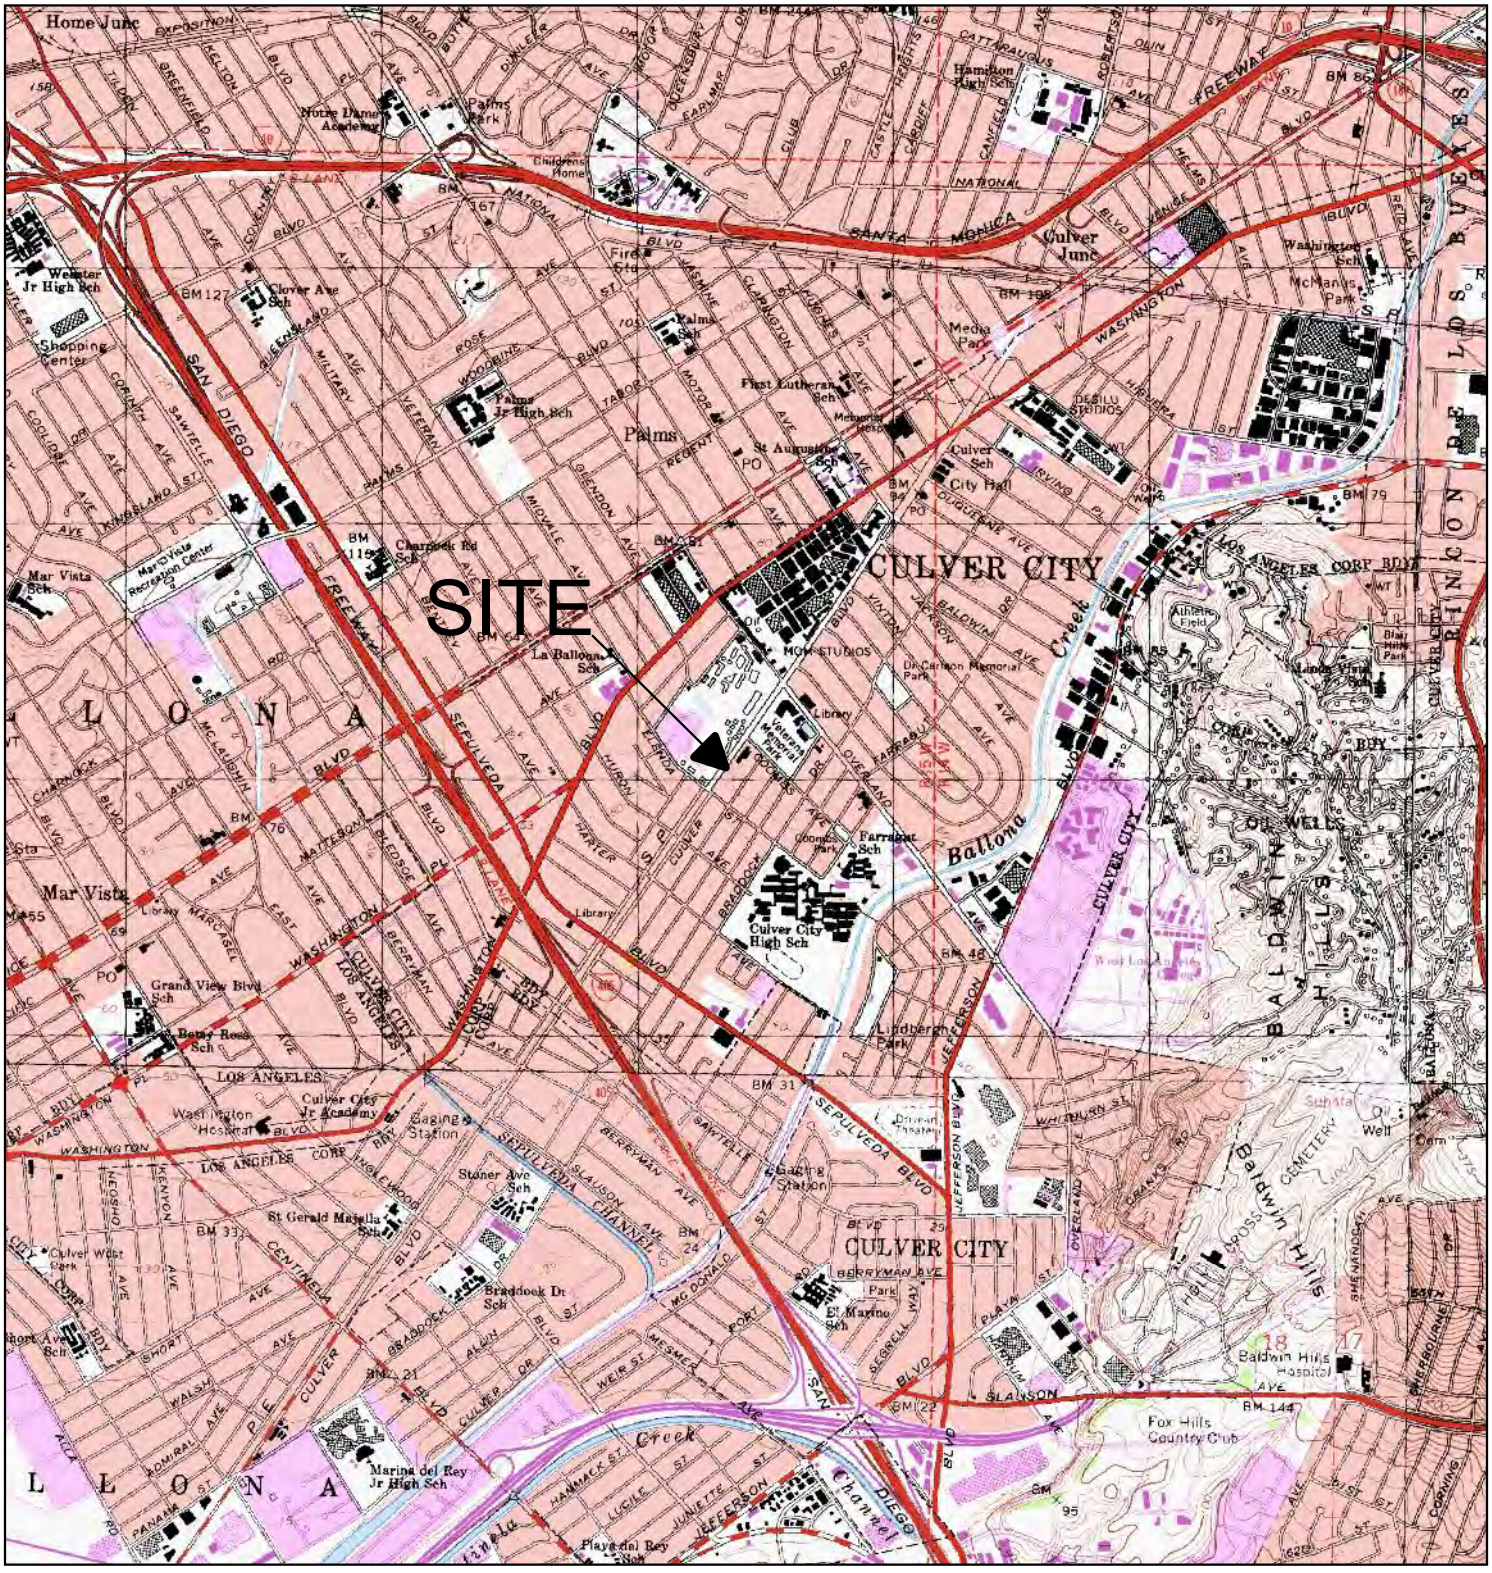

This ESA report was prepared by Adrian Escobar and reviewed by John Juhrend.

Mr. Juhrend has over 35 years of experience in the environmental and geotechnical consulting industry in California and Nevada. Mr. Juhrend is a California Professional Engineer and Certified Engineering Geologist, with a BS degree in engineering geology and MS degree in civil engineering. His personal experience includes the performance of hundreds of environmental projects including Phase I and Phase II site assessments, remedial investigations and feasibility studies, corrective action programs and litigation support. His primary expertise includes environmental assessments of Brownfields properties, industrial, commercial and residential properties, and transportation corridors.

I declare that, to the best of my professional knowledge and belief, I meet the definition of environmental professional as defined in §312.10 of 40 CFR 312 and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries investigation in conformance with the standards and practices set forth in 40 CFR Part 312.

John Juhrend, PE, CEG, CEM
Senior Engineer

User Questionnaire

1. What is the purpose of the Phase I Environmental Site Assessment?

2. Who is the property owner(s)?

3. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state, or local law?

4. Are you aware of any activity and land use limitations, such as engineering controls, land use restrictions or institutional controls that are in place for the site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?

5. Do you have any specialized knowledge related to the property or nearby properties?

6. Does the purchase price reasonably reflect the fair market value of the property?

7. Do you know the past uses of the property?

8. Do you know of specific chemicals that are present or once were present at the property?

9. Do you know of spills or other chemical releases that have taken place at the property?

10. Do you know of any environmental cleanups that have taken place at the property?

11. Do you know whether any helpful documents exist and, if so, whether copies can and will be provided for this assessment? These documents may include: Phase I or II Environmental Site Assessment reports, environmental compliance audit reports, environmental permits, registrations for underground or aboveground storage tanks, registrations for underground injection systems, or any other documents related to the property.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/27/2021 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/25/2021 has revealed that there are 4 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 3 CPS-SLIC sites

within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

CERS HAZ WASTE: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

A review of the CERS HAZ WASTE list, as provided by EDR, and dated 01/20/2021 has revealed that there is 1 CERS HAZ WASTE site within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that there are 8 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

LOS ANGELES CO LF METHANE: This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

A review of the LOS ANGELES CO LF METHANE list, as provided by EDR, and dated 02/04/2021 has revealed that there is 1 LOS ANGELES CO LF METHANE site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

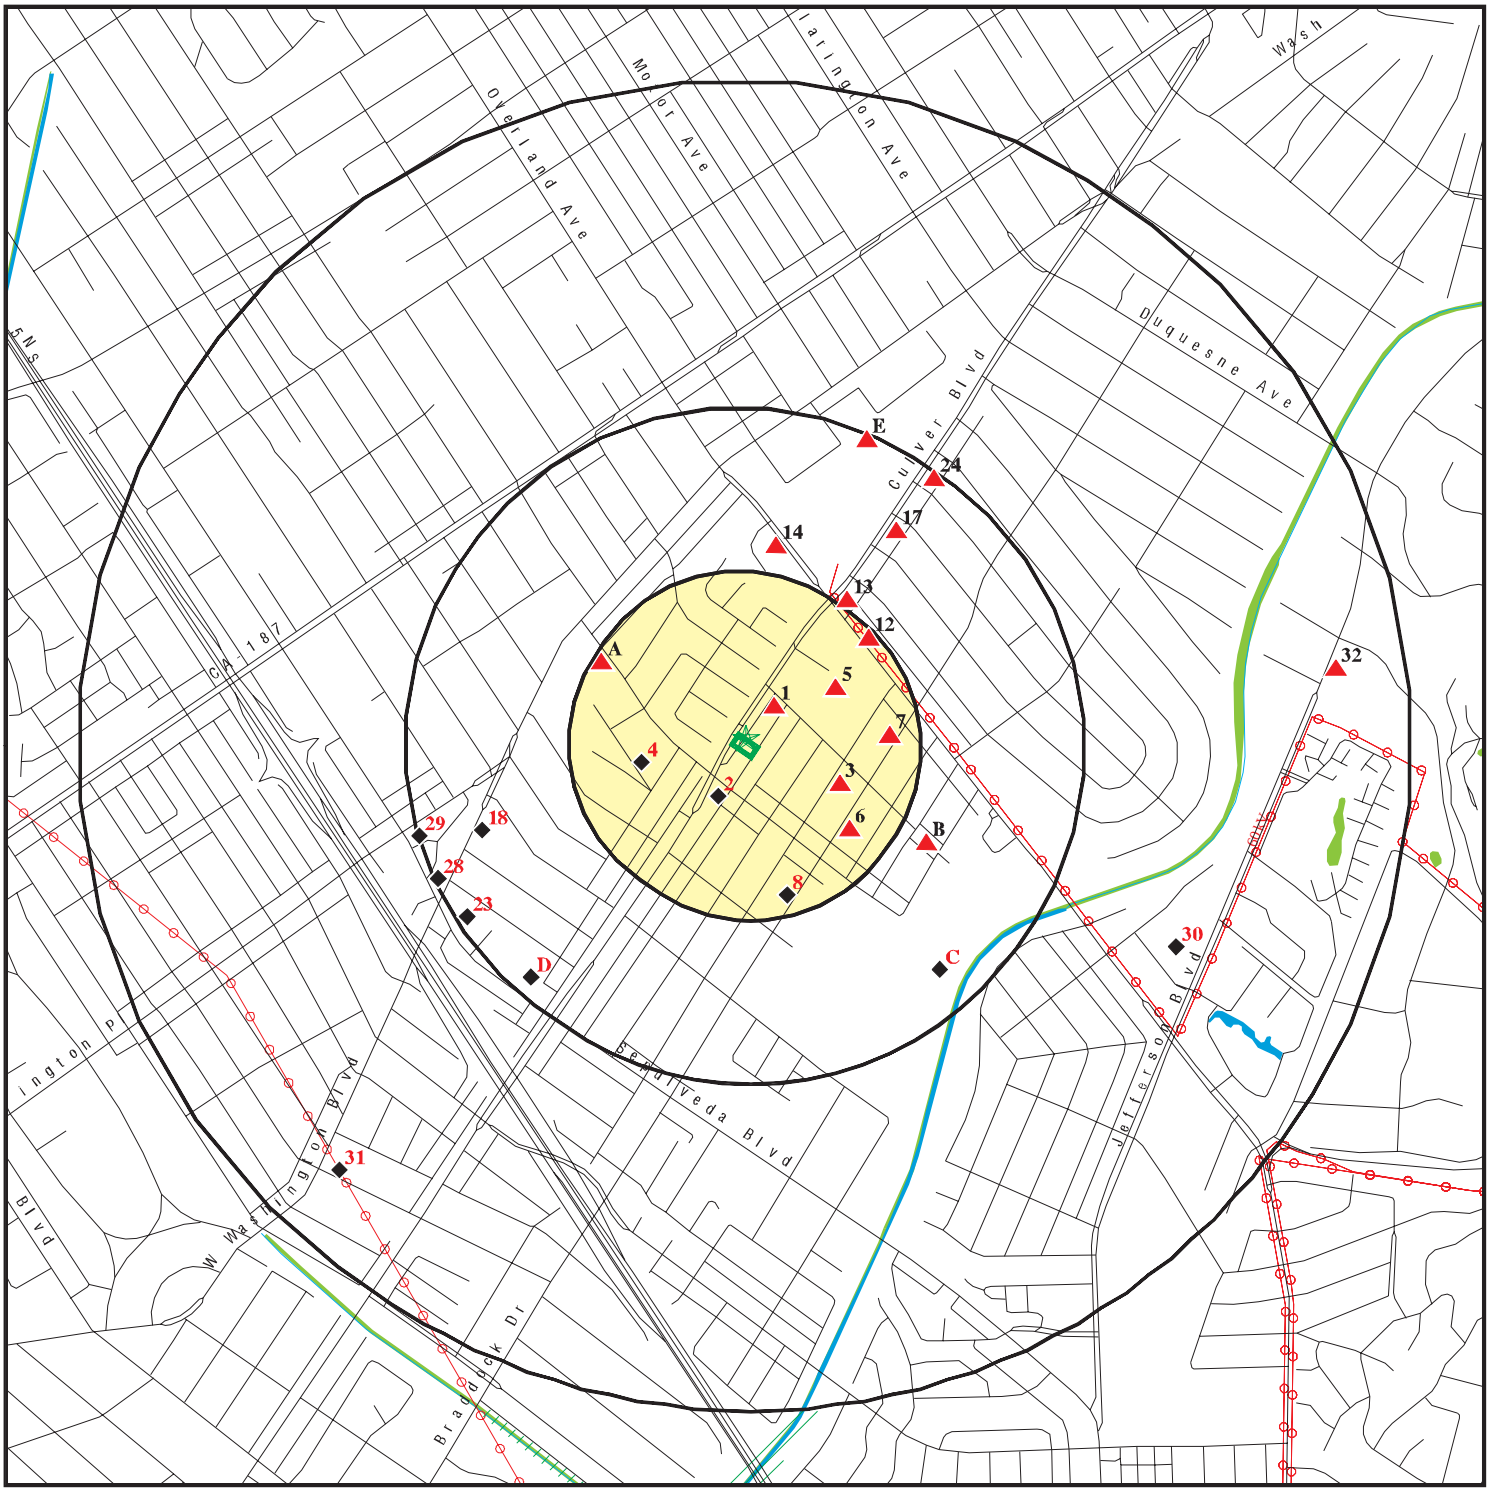

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
MGM DUMP	*4001 OVERLAND AVENUE*	*N 1/4 - 1/2 (0.296 mi.)*	*14*	*164*

EXECUTIVE SUMMARY

Due to poor or inadequate address information, the following sites were not mapped. Count: 7 records.

Site Name	Database(s)
CULVER BLVD. GST TRUST ADDITION	HAZNET, HWTS

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal

OHMEGA TECHNOLOGIES INC (Continued) **1000202352**

facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Gepaid:	CAD981397391
TSD EPA ID:	NVT330010000
CA Waste Code:	792 - Liquids with pH <= 2 with metals
Disposal Method:	H132 - Landfill Or Surface Impoundment That Will Be Closed As Landfill(To Include On-Site Treatment And/Or Stabilization)
Tons:	1.60545
Year:	2019
Gepaid:	CAD981397391
TSD EPA ID:	CAD028409019

OHMEGA TECHNOLOGIES INC (Continued) **1000202352**

CA Waste Code:	223 - Unspecified oil-containing waste
Disposal Method:	H135 - Discharge To Sewer/Potw Or Npdes(With Prior Storage--With Or Without Treatment)
Tons:	1.14675
Year:	2019
Gepaid:	CAD981397391
TSD EPA ID:	NVT330010000
CA Waste Code:	135 - Unspecified aqueous solution
Disposal Method:	H132 - Landfill Or Surface Impoundment That Will Be Closed As Landfill(To Include On-Site Treatment And/Or Stabilization)
Tons:	0.46200
Year:	2019
Gepaid:	CAD981397391
TSD EPA ID:	NVT330010000
CA Waste Code:	726 - Liquids with nickel >= 134 Mg./L
Disposal Method:	H132 - Landfill Or Surface Impoundment That Will Be Closed As Landfill(To Include On-Site Treatment And/Or Stabilization)
Tons:	0.91740
Year:	2019
Gepaid:	CAD981397391
TSD EPA ID:	NVT330010000
CA Waste Code:	181 - Other inorganic solid waste
Disposal Method:	H132 - Landfill Or Surface Impoundment That Will Be Closed As Landfill(To Include On-Site Treatment And/Or Stabilization)
Tons:	1.52500
Year:	2018
Gepaid:	CAD981397391
TSD EPA ID:	NVT330010000
CA Waste Code:	726 - Liquids with nickel >= 134 Mg./L
Disposal Method:	H132 - Landfill Or Surface Impoundment That Will Be Closed As Landfill(To Include On-Site Treatment And/Or Stabilization)
Tons:	0.45870
Year:	2018
Gepaid:	CAD981397391

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

CULVER CITY UNFD SCH DIST (Continued) **1000430750**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
STATE MASTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Case Type:	Cleanup Program Site
Case Worker:	TA
Local Agency:	Not reported
RB Case Number:	0910
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Soil, Soil Vapor
Potential Contaminants of Concern:	Not reported
Site History:	The ' site was formerly occupied by a laundromat and dry cleaner facility from 1962 to 1986. All , equipment related to the former dry, cleaner operation was removed from the Site. The Site currently houses' an ink and toner cartridges distributor. PCE was detected in soil at concentrations up to 2,400 micrograms .per kil ogram (4g/Kg), at 5 feet below ground surface (bgs). The highest concentration of PCE detected in groundwater is 1,500 micrograms per liter (.tg/L) and 40 a%g/t of trichloroethylene (TCE). A soil vapor survey consisting of ten sampling points collected at 5 feet bgs yielded up to 120 tg/L. PCE contaminated soil near the source area was remediate using soil vapor extraction (SVE) from June through December 2003. Soil confirmation samples collected in January 2004 indicated 'nondetectable concentrations of PCE and TCE. Based on the confirmation sampling results, the RegionalBoard issued a no further action (NFA) for soil only to the Site in August 2004. At the time of soil closure, eight (8) groundwater monitoring wells were installed at and in the vicinity of the Site. Since then, groundwater monitoring has been conducted on a quarterly basis. The results of the most recent groundwater monitoring data show PCE concentrations ranging from 9 to 708 ig/L and up to 31 ng/L of TCE. The sample with the highest concentration was collected from well MW-5, an on-Site and *downgradient well. The overall monitoring data suggest that PCE concentrations in up- and cross-gradient wells have decreased, but increased in down-gradient wells (MW-5, MW-7 and MW-8). The Site is located in the Central Coast Basin of the Coastal Plain of Los Angeles. Based on the soil boring log, the soil beneath the Site consists of a mixture of silt, clayey silt with fine to coarse sand,

TRANS-NATIONAL BUILDERS PROPERTY (Continued) **S106387160**

and a dense gravelly layer to approximately 55 feet bgs. Depth to groundwater was approximately 32 feet bgs measured January 2007, but was 49 feet bgs in the year 2000. Groundwater level is currently rising primarily due to the shutdown of Charnock production wells. The saturated zone at the Site consists of recent alluvium of the Ballona aquifer ("50 feet gravel") overlying the Silverado aquifer separated by an undifferentiated aquiclude. The groundwater flow direction is to the south-southeast.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 10/05/2020
Date Data Arrived at EDR: 02/17/2021

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health

South Map:	5640438 VENICE, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

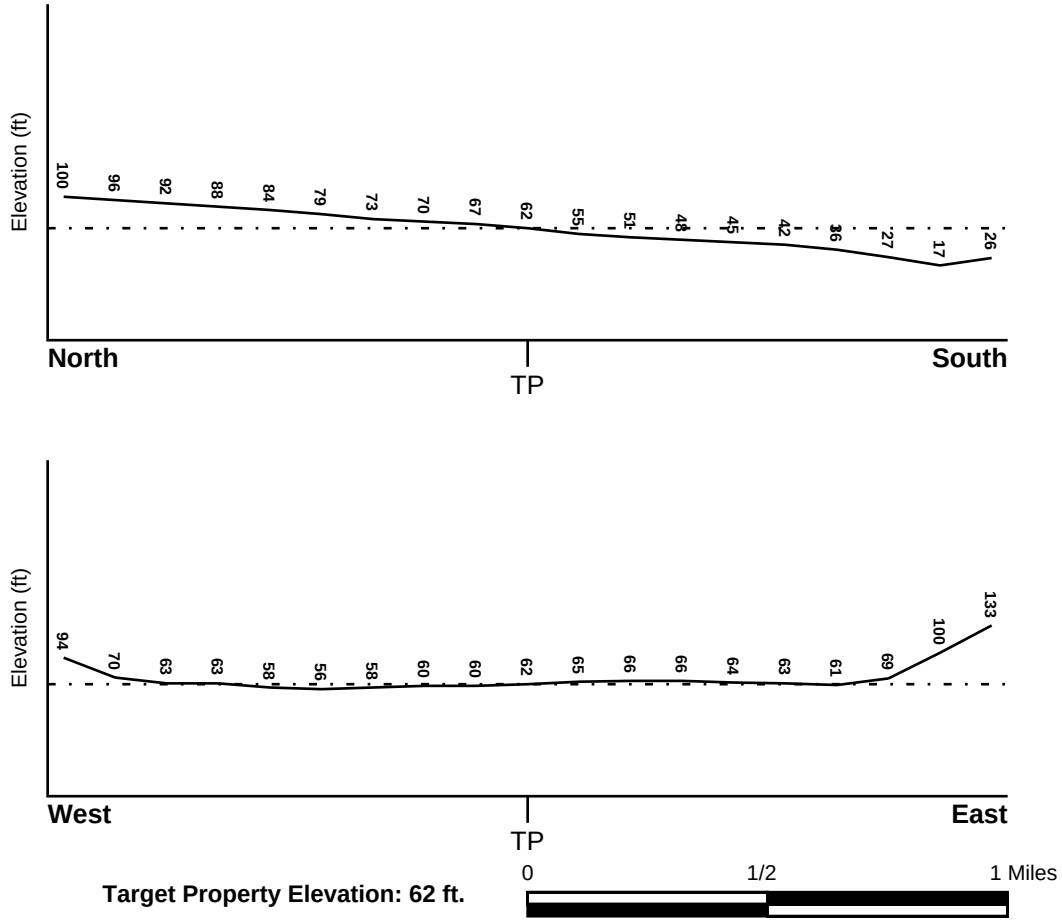

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 62 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1595F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1760F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BEVERLY HILLS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
71	1/2 - 1 Mile WSW	SSW
318	1/2 - 1 Mile SW	Not Reported
1G	1/2 - 1 Mile WSW	SSW
2G	1/2 - 1 Mile SW	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Geocon Geotechnical & Env were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

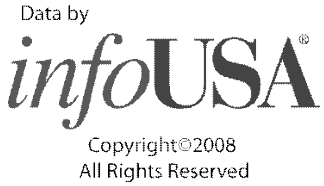

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

10858 and 10860 Culver Blvd.	2003, 2001, 2000, 1996, 1995, 1992, 1991, 1990, 1986, 1981, 1980, 1976, 1975, 1972, 1971, 1970, 1969, 1967, 1966, 1965, 1964, 1963, 1962, 1961, 1960, 1958, 1957, 1956, 1955, 1954, 1952, 1951, 1950, 1949, 1948, 1947, 1946, 1945, 1944, 1942, 1940, 1939, 1938, 1937, 1936, 1935, 1934, 1933, 1932, 1931, 1930, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1921, 1920

APPENDIX G

Site Owner/Occupant Questionnaire

The following questions are for: (1) the current owner of the property, (2) any major occupant of the property or, if the property does not have any major occupants, at least 10% of the occupants of the property, and (3) in addition to the current owner and the occupants identified in (2), any occupant likely to be using, treating, generating, storing, or disposing of hazardous substances and/or petroleum products on or from the property. A major occupant is any occupant using at least 40% of the leasable area of the property or any anchor tenant when the property is a shopping center. In a multi-family property containing both residential and commercial uses, residential occupants do not need to respond to this questionnaire unless they are involved in or have knowledge of the commercial or other uses.

Description of Site:

Question	Owner			Occupants (if applicable)		
1a. Is the property used for an industrial use?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
1b. Is any adjoining property used for an industrial use?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
2a. Have you observed evidence of or do you have any knowledge that the property has been used for an industrial use in the past?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
2b. Have you observed evidence of or do you have any knowledge that any adjoining property has been used for an industrial use in the past?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
3a. Is the property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
3b. Is any adjoining property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						

Question	Owner			Occupants (if applicable)		
4a. Have you observed evidence of or do you have any knowledge that the property was previously used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
4b. Have you observed evidence of or do you have any knowledge that any adjoining property was previously used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
5a. Are there currently any damaged or discarded automotive or industrial batteries, petroleum products, pesticides, paints or other chemicals in individual containers of > 5gal (19L) in volume or 50gal (190L) in the aggregate, stored on or used at the property or facility?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
5b. Have you observed evidence of or do you have any knowledge that there have been previously any damaged or discarded automotive or industrial batteries, petroleum products, pesticides, paints or other chemicals in individual containers of > 5gal (19L) in volume or 50gal (190L) in the aggregate, stored on or used at the property or facility?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
6a. Are there currently any industrial drums (typically 55 gal [208L]) or sacks of chemicals located on the property or at the facility?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
6b. Have you observed evidence of or do you have any knowledge that there have been previously any industrial drums (typically 55 gal [208L]) or sacks of chemicals located on the property or at the facility?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
7a. Have you observed evidence of or do you have any knowledge that fill dirt has been brought onto the property that originated from a contaminated site?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						

7b. Have you observed evidence of or do you have any knowledge that fill dirt has been brought onto the property that is of an unknown origin?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
8a. Are there currently any pits, ponds, or lagoons located on the property in connection with waste treatment or disposal?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
8b. Have you observed evidence of or do you have any knowledge that there have been previously any pits, ponds, or lagoons located on the property in connection with waste treatment or disposal?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
9a. Is there currently any stained soil on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
9b. Have you observed evidence of or do you have any knowledge that there has been previously any stained soil on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
10a. Are there currently any registered or unregistered storage tanks (aboveground or underground) located on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
10b. Have you observed evidence of or do you have any knowledge that there have been previously any registered or unregistered storage tanks (aboveground or underground) located on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
11a. Are there currently any vent pipe, fill pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
11b. Have you observed evidence of or do you have any knowledge that there have been previously any vent pipe, fill pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						

12a. Are there currently any flooring, drains, or walls located within the facility that are stained by substances other than water or were emitting foul odors?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
12b. Have you observed evidence of or do you have any knowledge that there have been previously any flooring, drains, or walls located within the facility that are stained by substances other than water or were emitting foul odors?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
13a. If the property is served by a private well or non-public water system, is there evidence of or do you have knowledge that contaminants have been identified in the well or system that exceed guidelines applicable to the water system?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
13b. If the property is served by a private well or non-public water system, is there evidence of or do you have knowledge that the well has been designated as contaminated by any government/health agency?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
14. Do you have any knowledge of environmental liens of governmental notification relating to past or recurrent violations of environmental laws with respect to the property or any facility located on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
15a. Have you been informed of the past existence of hazardous substances and/or petroleum products with respect to the property or any facility located on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
15b. Have you been informed of the current existence of hazardous substances and/or petroleum products with respect to the property or any facility located on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
15c. Have you been informed of the past existence of environmental violations with respect to the property or any facility located on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
15d. Have you been informed of the current existence of environmental violations with respect to the property or any facility located on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						

16. Do you have any knowledge of any environmental site assessment of the property or facility that indicated the presence of hazardous substances and/or petroleum products on, or contamination of, the property or recommended further assessment of the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
17. Do you know of any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any hazardous substances and/or petroleum products involving the property by any owner or occupant of the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
18a. Does the property discharge wastewater, on or adjacent to the property, other than stormwater, into a stormwater sewer system?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
18b. Does the property discharge wastewater, on or adjacent to the property, other than stormwater, into a sanitary sewer system?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
19. Have you observed evidence of or do you have any knowledge that any hazardous substances and/or petroleum products, unidentified waste materials, tires, automotive or industrial batteries, or any other waste materials have been dumped above grade, buried and/or burned on the property?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						
20. Is there a transformer, capacitor, or any hydraulic equipment for which there are records indicating the presence of PCBs?	Yes	No	Unk	Yes	No	Unk
Explain if yes:						

Unk – “unknown” or “no response”

Additional Questions

A) Describe the current use of the property.

B) How long has the property been used for this purpose?

C) How long have you owned the property?

D) List the existing structures on the property and their age.

E) Describe the past uses, owners, and operators of the property. (Be as detailed as possible and note approximate time periods.)

Transportation Assessment

300 Corporate Pointe, Suite 470, Culver City, CA 90230
T: (310) 473-6508 | www.crainandassociates.com

10876 CULVER BOULEVARD COMPREHENSIVE PLAN MODIFICATION TRANSPORTATION ANALYSIS

A Comprehensive Plan modification (the "Project") is being proposed at the Wende Museum (the "Museum") located at 10876 Culver Boulevard in the City of Culver City (the "City"). The Museum is proposing an expansion to add a Creative Community Center (CCC) which requires the Comprehensive Plan modification. The Project plans to redevelop the property adjacent to the Museum for the CCC, and construct up to six units of affordable housing on a site of the Museum (the "Housing"). The development of the Museum and Housing is occurring in three phases:

- Phase 1 consists of the already-completed Museum that involved the adaptive reuse of an existing Armory building.
- Phase 2 involves the development of the CCC that will include a combination of demolishing, reusing, and constructing buildings.
- Phase 3 involves the development of up to six affordable housing units and redevelopment and relocation of the community garden.

The Project consists of Phases 2 and 3. Crain & Associates prepared this transportation analysis to determine the transportation impacts of the Project.

BACKGROUND

As part of the Museum's Phase 1, transportation analyses were conducted in 2013 and approved by the City before construction of the Wende Museum. A *Revised Initial Traffic Analysis* was prepared by the Rifkin Transportation Planning Group and approved on January 30, 2013 (the "2013 Traffic Analysis"), and the *Wende Museum Parking Utilization Study* was prepared by Civic Enterprise Associates, LLC dated March 15, 2013 (the "2013 Parking Utilization Study"). These 2013 analyses provide a wealth of information on the Project transportation environment and surrounding parking conditions during typical times. In addition to the aforementioned studies, we also reviewed the *Culver City Transportation Study Criteria and Guidelines*, adopted on July 13, 2020 (the "City Guidelines") and the Culver City Municipal Code Section 17.320.020 *Number of Parking Spaces Required* (the "Code Requirements").

PROJECT DESCRIPTION

The Museum currently occupies approximately 13,073 square feet of a former vacant armory building located at the southwest corner of the Culver Boulevard and Coombs Avenue intersection. The Museum is bounded by Culver Boulevard to the north, Coombs Avenue to the east, a public alley to the south, and the Project site to the west. The Museum and Project sites are generally surrounded by low-density single-family housing to the north and south, open space to the east, and medium-density multiple-family housing to the west.

The Project proposes an amendment to the Wende Comprehensive Plan for an area consisting of 49,572 square feet (21 lots). Phase 1, the already-completed Museum, includes approximately 38,305 square feet

of building development on Lots 14-30. Phase 1 involved the adaptive reuse of an existing 13,073 square foot Armory building located at 10808 Culver Boulevard which is currently modified to be used as a museum, offices, storage, permanent and temporary exhibition space, and event space.

Phase 2 involves the development of the CCC through the demolition of the 2,200 square foot building, the adaptive re-use of the 1,920 square foot building, and the construction of 5,102 square feet of new development. The new 7,022 square foot CCC will contain a theater/multipurpose space in the A-Frame portion that will contain an 88-seat performance space, along with a multi-purpose space, classrooms, a demonstration garden, meeting rooms, offices, and ancillary spaces. Some of the Museum's existing functions, such as offices and event space will be moved to the CCC. Phase 2 also includes street-level landscaping and sculpture, along with a rooftop garden. The existing garden at the Museum will be expanded to establish continuity between the new development and the existing Museum and sculpture garden.

The CCC will operate with the same days and hours of operation as the existing Museum of Monday through Friday from 10:00 AM to 9:00 PM and Saturday and Sunday 10:00 AM to 5:00 PM, though special events would be allowed from 7:00 AM to 11:00 PM, seven days a week. The originally adopted Comprehensive Plan allowed as a permitted use special event related to the Museum operations. As noted by the Comprehensive Plan, "These events are considered part of the operation of the Museum and are permitted. Events that are not a part of the normal operation of the Museum, including private parties and banquets, may be limited to a total of 12 events annually with a Special Event Permit, pursuant to Section 17.520 of the CCMC." Phase 2 of the Project will continue the existing operation, including compliance with the City's Special Event Permit process, as applicable. The Wende will hire a full-time Program Coordinator for the expanded Museum to ensure that major events do not occur at the same time at the existing Museum and the CCC. Additionally, once in operation, the Program Coordinator will ensure that the performance space and the meeting rooms/classrooms will not be simultaneously occupied.

Phase 3 is a City initiated project consisting of the development of 4,507 square feet, currently being used as a community garden. Phase 3 involves the development of up to six affordable housing units with 4,511 square feet of garden. The community garden will include 2,731 square feet of area that will replace seventeen existing parking spaces. Also included in the Phase 3 Project will be reconfiguring of six existing parking spaces to provide two accessible parking spaces. This will reduce the parking supply at Lot 1 by a net total of 21 parking spaces as a result of the Project. The parking lot aisles and driveways are not to be modified as part of the Project.

Attachments 1(a) and 1(b) contain the conceptual site plan showing all three phases of the Museum and Housing development.

PROJECT STUDY AREA

The Project site is located in the Park West Neighborhood within the City of Culver. The area surrounding the site is mainly comprised of various residential land uses that include multifamily residential and single-family residential land uses, along with open space that includes the Veterans Memorial Park. Transit service

within walking distance of the site is primarily bus transit service, with bus stops located along Culver Boulevard and Overland Avenue.

Regional access for the Project site and the surrounding area is well-served by an extensive freeway, arterial, neighborhood feeder, and local street network. Freeways are easily accessible to the Project site and provide convenient access to the larger, regional roadway network, with the closest freeway being Interstate 405 Freeway (I-405). The primary roadways directly serving the site and their classifications according to the *Culver General Plan Circulation Element (1995)* include:

Culver Boulevard is a generally east-west roadway that extends from Playa del Rey east through the City and eventually terminates at its intersection with Venice Boulevard. Within the study area, the roadway is classified as a Primary Artery and provides two travel lanes in each direction that is separated by a raised landscaped median; left-turn lanes along with right-turn lanes at select approaches are provided at the two signalized intersections at Overland Avenue and Elenda Street. The Culver Boulevard Median bicycle path, a cycle track (two-way bicycle facility separated from automobiles by an island) is provided along the north side of Culver Boulevard west of Elenda Street. The posted speed limit in the study area is 40 miles per hour (mph). On-street parking is prohibited within the extents of the study area.

Overland Avenue is a generally north-south roadway that extends from West Los Angeles south through the City and becomes Playa Street west of Playa Court within the City. Within the study area, the roadway is classified as a Primary Artery and provides two travel lanes in each direction; dual left-turn lanes and a southbound right-turn lane are provided at its intersection with Culver Boulevard. The posted speed limit in the study area is 35 mph. On-street parking is permitted along select segments within the extents of the study area. South of Culver Boulevard, a Class II bicycle facility is provided along both sides of the roadway south where it connects with the Ballona Creek Bike Path.

Coombs Avenue is a generally north-south local roadway that extends between Culver Boulevard south to Franklin Avenue. The roadway provides one travel lane with on-street parking permitted along the roadway. The posted speed limit in the study area is 25 mph.

Elenda Street is a generally north-south Neighborhood Feeder roadway that extends from Washington Boulevard south to Farragut Drive. Within the study area, the roadway provides one travel lane in each direction with a right-turn and left-turn lanes provided at its intersection with Culver Boulevard. The roadway generally provides one travel lane with on-street parking permitted along the roadway. The posted speed limit in the study area is 25 mph.

Public Alley extends the length of the Project block and forms the southern boundary of the Museum site. It has an approximate width of 20 feet and provides access to many of the residential uses fronting Wagner Street along with secondary access for the uses on Culver Boulevard.

The City is currently constructing safety and operational improvements at the intersection of Culver Boulevard & Elenda Street under the La Ballona Safe Routes to School program. The signal modifications will facilitate the planned implementation of a cycle track (two-way bicycle facility separated from automobiles by an island) along the east side of Elenda Street from Culver Boulevard to

Washington Boulevard. This improvement is being installed to improve neighborhood connectivity to the existing Culver Boulevard Median bicycle path. The signal and cycle track upgrades will also provide safer access to the Project area by modes that are alternatives to automobile use. The safety improvements are anticipated to decrease automobile usage.

PROJECT VEHICLE ACCESS AND PARKING

Existing off-street public parking lots are located adjacent to the Museum and Project site on the north side of the site. In total there are six off-street public parking lots in the general vicinity of the Project site, all of which serve the Museum. A total of 305 marked parking spaces were inventoried in these six parking lots. These parking lots are a shared-use facility for several of the public uses nearby. According to the 2013 Parking Utilization Study, the parking lots that directly serve the Project and Museum are identified as Lots 1 and 2 in the study, respectively. Lot 1 provides 62 parking spaces with Lot 2 providing 58 parking spaces. The public parking lots that currently serve the Museum and will serve the Project are accessed on Culver Boulevard (two driveways) and Coombs Avenue (one driveway). Full access and egress are provided on Coombs Avenue and at the northern driveway on Culver Boulevard; access only is provided from the southern driveway on Culver Boulevard. Phase 3 proposes a relocation of the community gardens that will remove a total of seventeen parking spaces along with the reconfiguration of six existing parking spaces that will be replaced by two accessible parking spaces. This will reduce the parking supply at Lot 1 by a net total of 21 parking spaces as a result of the Project. Once the Project is complete, Veterans Memorial Park will be served by a total of 284 spaces in six parking lots, although seven spaces are proposed to be assigned to specific non-project uses.

PROJECT BICYCLE IMPROVEMENTS

The Project intends to provide bicycle parking that will meet or exceed the City bicycle parking requirements for short-term and long-term parking according to the Conditions of Approval. Municipal Code parking requirements include a total of four long-term parking spaces and eight short-term parking spaces for Phase 2 and one bicycle parking space for Phase 3.

CITY TRANSPORTATION STUDY CRITERIA & GUIDELINES SCREENING ANALYSIS

According to the City Guidelines, a transportation study is required if a project's net daily trips are at or above the 250 trip threshold. To determine whether or not the Project would be required to conduct a transportation study, we evaluated the Project's trip generation. The methodology, assumptions, and results of the trip generation evaluation are detailed below.

As part of the analysis, we have reviewed previously approved documents prepared in 2013 associated with the existing Wende Museum (Phase 1). These documents form the basis of our analysis due to the current limitations imposed by the work-from-home, social distancing, and other Covid-19 related restrictions on the standard practice of gathering new transportation-related data. This section outlines the adjustments to the 2013 Traffic Analysis that were applied for application to the Comprehensive Plan modification considering both the Wende Museum CCC and Housing development during Phases 2 and 3.

The 2013 Traffic Analysis contains a trip generation section and a trip generation table noted within the study as Attachment 2, which analyzed daily trips. The daily trips are based on the employment level for the then proposed and now existing Wende Museum facility. The 2013 Traffic Analysis employment levels are consistent with the existing Wende Museum (Phase 1) employment level. Therefore, the same trip generation rates were assumed for the Phase 2 Wende Museum and it was assumed that the existing employment will increase in proportion to the building area increase in square footage of the Project. The 2013 Traffic Analysis estimates 41-52 daily trips for the larger existing facility, with 6-7 AM peak hour and 4-7 PM peak hour trips. The range is predicated on comparing the Institute of Transportation Engineers (ITE) Trip Generation, 10th Edition rates-based generation for land use code (LUC) 580 - Museum to the business plan-based generation. The Project will add approximately 7,022square feet, compared to the 13,073 square feet for the existing Wende Museum; approximately half of the size of the existing Museum. Therefore, Phase 2 of the Wende Museum expansion would be expected to add 22-28 daily trips.

As far as the 88 seat performance space, that space is not included in the Museum CCC Phase 2 analysis for weekday peak-hour performances. Assuming a full seating event does occur on a weekday – weekday mid-day or evening – and assuming a standard AVR of 2.5, 36 inbound and 36 outbound trips would be generated on that weekday. The ITE Trip Generation, 10th Edition rate of .38 trips for the Friday PM Peak Hour of Generator would estimate 34 trips, slightly less than the 36 trip estimate. The trip generation of 72 trips per day is well below the 250 trips per day screening threshold for a transportation impact study to be required based on trip generation. The performance space was assumed to be fully utilized in the weekday analysis above, and weekend trip generation would not be expected to be greater than 72 trips. Additionally, events are expected to be longer than one hour, so the trip generation is not expected to exceed 36 in an AM or PM weekday event, even for an occasional event starting or ending in a peak hour.

Phase 3 of the Project will construct six multifamily affordable units that are conservatively considered as generating trips at the ITE LUC 220 – Multifamily Housing (Low-Rise), General Urban/Suburban location rate of 7.32 trips per day. This rate does not account for the transit service at the Culver Boulevard/Elenda Street bus stop closest to the Project, nor the reduced trip generation from affordable housing. The six affordable housing units are estimated to generate a total of 44 daily trips.

When the 44 daily trips for Phase 3 are added to the 28 maximum daily trips anticipated in Phase 2, there would be a total Project daily trip generation of 72 trips. Therefore, the Project (Phases 2 + 3) trip generation of 72 or fewer daily trips is well below the 250 daily trip threshold, and no further transportation analysis is required based on the Project's trip generation.

The City Guidelines also contain a list of six additional potential areas of concern that may require a full or selected transportation study:

- Creates adverse conditions for bicycles or pedestrians – *The Project is on an already developed site and is not proposing any additional driveways or parking. The walking areas surrounding the Wende Museum Phase 2 and Phase 3 development will be upgraded as part of the Project. The Community Gardens are fenced and gated.*

- Creates a pedestrian or vehicular conflict due to proximity to an intersection – *The Project is on an already developed site that is not adjacent to any intersections.*
- Generates a significant amount of traffic on residential streets – *The Project site is located along Culver Boulevard, which is a Primary Artery and not a residential street. The existing access along Culver Boulevard is to be used by the Project.*
- Generates a significant amount of additional parking on residential streets – *The Project is not located in a residential neighborhood. Additionally, based on the results of the Project parking demand analysis, the additional parking demand associated with Phases 2 and 3 will be accommodated in either the closest parking lots (Lots 1 and 2) or via the combined six off-street public parking lots nearby the Project.*
- Generates traffic that could create problems that interfere with the flow of traffic on roadways or driveways – *The Phase 2 Project is anticipated to generate fewer peak hour trips than the existing Wende Museum (Phase 1), which in the 2013 Traffic Analysis was estimated to generate 4-7 peak hour trips. The Phase 3 Project, per the ITE LUC 220 rates will generate 3-4 peak hour trips, for a Project total of 11 or fewer trips in either peak hour.*
- Includes a proposed driveway location that may have limited visibility due to the roadway's curving alignment or other safety, design or operational issues – *The Project does not propose any additional driveways.*

Based on a review of the additional potential areas of concern as applied to the Project, a transportation impact analysis of the Project is not necessary.

PARKING UTILIZATION STUDY

The 2013 Parking Utilization Study contains parking utilization data for the surface parking lots closest to the Project, and other nearby parking lots serving the Veterans Memorial Park adjacent to the Wende Museum. The parking utilization measured in the 2013 Parking Utilization Study, plus consideration that the existing Wende Museum (Phase 1) utilizes a portion of the existing parking, forms the base parking demand level. The added Project (Phase 2 and Phase 3) parking demand was evaluated as a further incremental addition to the overall parking demand.

The results of the Project parking demand study demonstrated that there is adequate parking supply available to accommodate the additional parking demand of the Project -- associated with Phases 2 and 3 – even with the net reduction in the parking supply of 21 spaces. In the event that the closest parking lots (Lots 1 and 2) are at capacity, the findings conclude that there is sufficient parking supply in the combined six off-street public parking lots to accommodate the additional Project demand.

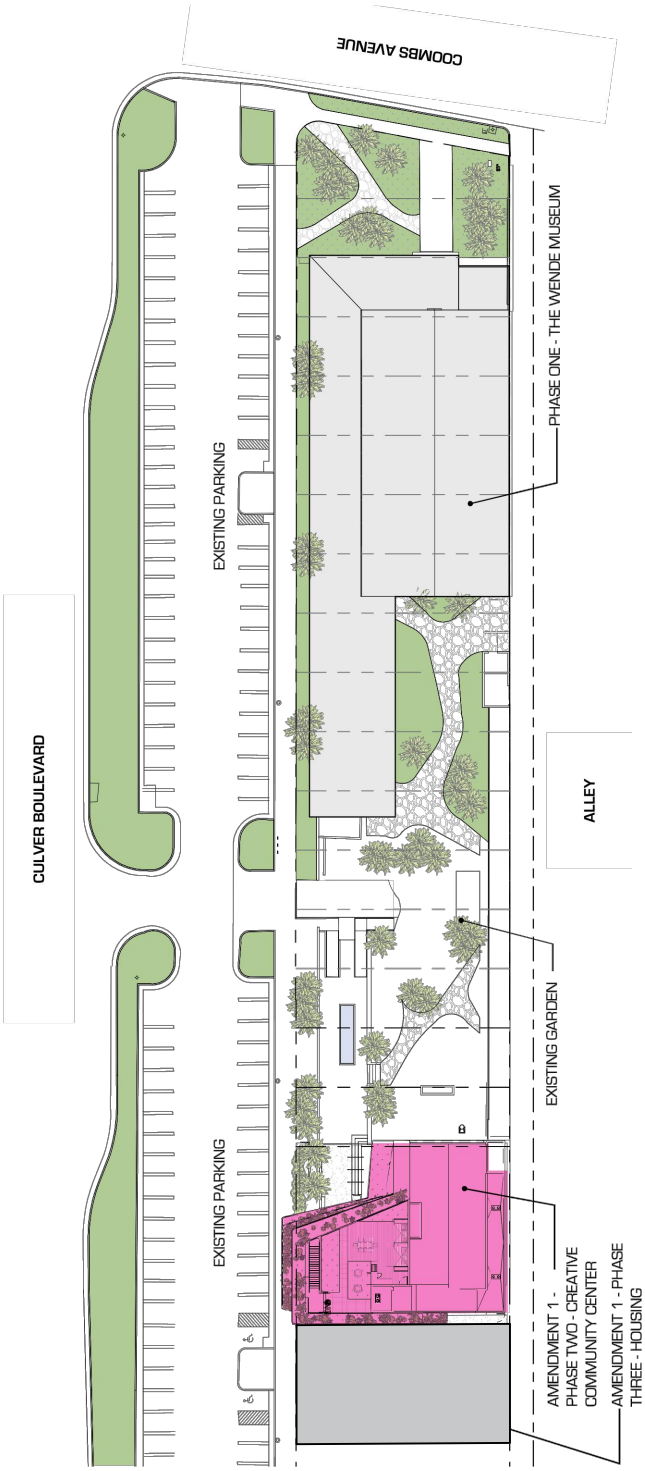

The methodology, assumptions, and results of the Project parking demand are provided in the *10876 Culver Boulevard Comprehensive Plan Modification Project Parking Demand Study Technical Memorandum* prepared by Crain & Associates.

CONCLUSIONS

Based on the City Guidelines and utilizing the data from the 2013 Traffic Analysis, a transportation impact analysis associated with Phases 2 and 3 are not necessary. Regarding Project parking, by using the 2013 Parking Utilization Study data, it was determined that the Project will have ample parking supply when considering all the nearby parking lots.

RE: Noise and Vibration Impacts Assessment for the Wende Museum of the Cold War Project

SUMMARY

The purpose of this Technical Memorandum is to evaluate potential noise and vibration impacts in accordance with California Environmental Quality Act (CEQA) requirements for expansion of the Wende Museum of the Cold War Project (proposed project). The proposed project would not result in a significant noise or vibration impact in the context of the Appendix G Environmental Checklist criteria of the CEQA Guidelines during construction or operational activities.

PROJECT DESCRIPTION

The proposed project would amend the Wende Comprehensive Plan for an area consisting of 49,572 square feet (21 lots). **Figure 1** show the Regional Location and the Project Location. Phase One, which is already completed, includes Lots 14-30 (approximately 38,305 square feet). Phase One involved the adaptive reuse of an existing 13,073 square foot Armory building located at 10808 Culver Boulevard which is currently used as a museum, offices, storage, permanent and temporary exhibition space, and event space (the Museum). The Museum is served by 305 existing parking spaces. Phase One also included the redevelopment of parking into a sculpture garden.

Phase Two consists of the redevelopment of 6,760 square feet, currently developed with an existing 2,200 square foot two-story building and an existing 1,920 square foot A-Frame building. Phase Two involves the development of a Creative Community Center (CCC) through the demolition of the 2,200 square foot building, the adaptive re-use of the 1,920 square foot building and construction of 5,102 square feet of new development. The new 7,022 square foot CCC will contain a theater/multipurpose space in the A-Frame portion, along with a multi-purpose space, classrooms, a demonstration garden, meeting rooms, offices and ancillary spaces. Phase Two also includes street level landscaping and sculpture, along with a rooftop garden. The existing garden at the Museum will be expanded to establish continuity between the new development and the existing Museum and sculpture garden. Phase Two contains 2,719 square feet of hardscape and 1,466 square feet of landscaping. Some of the Museum's existing functions, such as offices and event space will be moved to the CCC. The Wende will hire a full-time Program Coordinator for 10858 Culver Blvd to ensure that major events never occur at the same time at the Museum and at the CCC. Phase Two will be served by 305 parking spaces.

Phase Three is a City initiated project consisting of the development of 4,507 square feet, currently being used as a community garden. Phase Three involves the development of up to six affordable housing units and redevelopment of the community garden. Phase Three will be served by 284 parking spaces. **Figure 2** illustrate the site plan.

Noise and Vibration Impacts Assessment

THE WENDE MUSEUM

FIGURE 1

PROJECT LOCATION

Source: AUX Architecture, 2021.

Construction of the proposed project is anticipated to begin in July 2021 and take approximately 12 months to complete, concluding in July 2022. The construction period would include demolition and site preparation activities, installation of building foundations and utilities, and installation of landscaping and hardscape elements. Construction activities would not include significant excavation and export of soils.

NOISE AND VIBRATION FUNDAMENTALS

Noise

The following noise and vibration information is summarized from the California Department of Transportation (Caltrans) guidance.[1] Sound can be described as the mechanical energy of a vibrating object transmitted by pressure waves through a liquid or gaseous medium (e.g., air) to a hearing organ, such as a human ear. Noise is defined as loud, unexpected, or annoying sound. The standard unit of measurement for noise is the decibel (dB). The human ear is not equally sensitive to sound at all frequencies. The A-weighted scale, abbreviated dBA, reflects the normal hearing sensitivity range of the human ear. On this scale, the range of human hearing extends from approximately 3 to 140 dBA.

The noise analysis discusses sound levels in terms of Equivalent Noise Level (L_{eq}) and Community Noise Equivalent Level (CNEL). L_{eq} is the average noise level on an energy basis for any specific time period. The L_{eq} for one hour is the energy average noise level during the hour. The average noise level is based on the energy content (acoustic energy) of the sound. L_{eq} can be thought of as the level of a continuous noise which has the same energy content as the fluctuating noise level. The equivalent noise level is expressed in units of dBA. CNEL is an average sound level during a 24-hour period. CNEL is a noise measurement scale, which accounts for noise source, distance, single-event duration, single-event occurrence, frequency and time of day. Due to the lower background noise level, human reaction to sound between 7:00 p.m. and 10:00 p.m. is as if the sound were actually 5 dBA higher than if it occurred from 7:00 a.m. to 7:00 p.m. From 10:00 p.m. to 7:00 a.m., humans perceive sound as if it were 10 dBA higher. Hence, the CNEL is obtained by adding an additional 5 dBA to sound levels in the evening from 7:00 p.m. to 10:00 p.m. and 10 dBA to sound levels in the night from 10:00 p.m. to 7:00 a.m. Because CNEL accounts for human sensitivity to sound, CNEL is always a higher number than the actual 24-hour average sound level.

Noise levels decrease as the distance from the noise source to the receiver increases. Noise generated by a stationary noise source, or "point source," decreases by approximately 6 dBA over hard surfaces (e.g., reflective surfaces such as parking lots or smooth bodies of water) and 7.5 dBA over soft surfaces (e.g., absorptive surfaces such as soft dirt, grass, or scattered bushes and trees) for each doubling of the distance. For example, if a noise source produces a noise level of 89 dBA at a reference distance of 50 feet, then the noise level is 83 dBA at a distance of 100 feet from the noise source, 77 dBA at a distance of 200 feet. Noise generated by a mobile source decreases by approximately 3 dBA over hard surfaces and 4.8 dBA over soft surfaces for each doubling of the distance. Generally, noise is most audible when the source is in a direct line-of-sight of the receiver. Barriers, such as walls, berms, or buildings that break the line-of-sight between the source and the receiver greatly reduce noise levels from the source since sound can only reach the receiver by bending over the top of the barrier. However, if a barrier is not sufficiently high or long to break the line-of-sight from the source to the receiver, its effectiveness is greatly reduced.

Studies have shown that the smallest perceptible change in sound level for a person with normal hearing sensitivity is approximately 3 dBA. A change of at least 5 dBA would be noticeable and may evoke a community reaction. A 10-dBA increase is subjectively heard as a doubling in loudness and would likely cause a negative community reaction.

[1]Caltrans, *Technical Noise Supplement*, September 2013.

Health Effects of Noise[2]

The most obvious negative effects of noise are physical damage to hearing. Other obvious effects are the interference of noise with certain activities, such as sleeping and conversation. Less obvious are the stress effects of noise.

Hearing Damage. A person exposed to high noise levels can suffer hearing damage, either gradual or traumatic. Sustained exposure to moderately high noise levels over a period of time can cause gradual hearing loss. It starts out as a temporary hearing loss, such as immediately after a loud rock concert. The hearing usually restores itself within a few hours after exposure, although not quite to its pre-exposure level. This is also called a temporary threshold shift. Although the permanent deterioration may be negligible, it will become significant after many repetitions of the exposure. At that time, it is considered permanent hearing damage. The primary cause of permanent hearing damage is daily exposure to industrial noise.

Short, sudden exposure to an extremely high noise level, such as a gunshot or explosion at very close range, can cause a traumatic hearing loss, which is very sudden and can be permanent. Occupational exposure to noise is controlled at the federal level by Occupational Safety and Health Administration and at the state level by the California Division of Safety and Health. The maximum allowable noise exposure over an eight hours period is a level of 90 dBA. For each halving of the exposure time, the maximum noise level is allowed to increase 5 dBA. Therefore, the maximum allowable noise exposure (100 percent) is 90 dBA for eight hours, 95 dBA for four hours, 100 dBA for two hours, 105 dBA for one hour, 110 dBA for 30 minutes, and 115 dBA for 15 minutes.

Stress-Related Diseases. Noise can cause stress in humans and may be responsible for stress-related diseases, such as hypertension, anxiety, and heart disease. Although noise is probably not the sole culprit in these diseases, it can be a contributor. The degree to which noise contributes to stress-related diseases depends on noise frequencies, their bandwidths, noise levels, and time patterns. In general, higher frequencies, pure tones, and fluctuating noise levels tend to be more stressful than lower frequencies, broadband, and constant-level noise.

Vibration

Vibration is an oscillatory motion through a solid medium in which the motion's amplitude can be described in terms of displacement, velocity, or acceleration. Vibration can be a serious concern, causing buildings to shake and rumbling sounds to be heard. In contrast to noise, vibration is not a common environmental problem. It is unusual for vibration from sources such as buses and trucks to be perceptible, even in locations close to major roads. Some common sources of vibration are trains, buses on rough roads, and construction activities, such as rock blasting, pile driving, and heavy earth-moving equipment. High levels of vibration may cause physical personal injury or damage to buildings. In addition, high levels of vibration may damage fragile buildings or interfere with equipment that is highly sensitive to vibration (e.g., electron microscopes).

There are several different methods that are used to quantify vibration. The peak particle velocity (PPV) is defined as the maximum instantaneous peak of the vibration signal. The PPV is most frequently used to describe vibration impacts to buildings and is usually measured in inches per second. The root mean square (RMS) amplitude is most frequently used to describe the effect of vibration on the human body. The RMS amplitude is defined as the average of the squared amplitude of the signal. Decibel notation (VdB) is commonly used to measure RMS. The VdB acts to compress the range of numbers required to describe vibration.[3]

[2]Caltrans, *Technical Noise Supplement*, September 2013.
[3]FTA, *Transit Noise and Vibration Impact Assessment*, September 2018.

Health Effects of Vibration

Ground-borne vibration levels rarely affect human health. Instead, most people consider ground-borne vibration to be an annoyance that can affect concentration or disturb sleep. Although responses to vibration differ, 65 Vdb is the approximate threshold of perception for many people. The approximate dividing line between barely and distinctly perceptible is 75 Vdb and 85 Vdb is typically only acceptable if there are an infrequent number of events per day.

REGULATORY FRAMEWORK

Federal

Noise. The Noise Control Act of 1972 established programs and guidelines to identify and address the effects of noise on public health, welfare, and the environment. In 1981, the United States Environmental Protection Agency (USEPA) determined that subjective issues such as noise would be better addressed at local levels of government, thereby allowing more individualized control for specific issues by designated federal, state, and local government agencies. Consequently, in 1982, responsibilities for regulating noise control policies were transferred to specific federal agencies, and state and local governments. However, noise control guidelines and regulations contained in the USEPA rulings in prior years remain in place. No federal noise regulations are directly applicable to the proposed project.

Vibration. The Federal Transit Administration (FTA) has published guidance that may be used to assess the potential for vibration effects.[4] For damage, the impact criteria are established based on the structural foundation of the potentially impacted building. Site visits indicate that the buildings near the project site are constructed with engineer concrete or reinforced concrete and steel. Vibration levels that exceed a PPV of 0.3 inches per second could potentially cause damage.

State

Noise. The State of California has adopted noise standards in areas of regulation not preempted by the federal government. State standards regulate noise levels of motor vehicles, sound transmission through buildings, occupational noise control, and noise insulation. State regulations governing noise levels generated by individual motor vehicles and occupational noise control are not applicable to planning efforts, nor are these areas typically subject to CEQA analysis. State law requires that each county and city adopt a General Plan that includes a Noise Element which is to be prepared per guidelines adopted by the Governor's Office of Planning and Research. The purpose of the Noise Element is to limit the exposure of the community to excessive noise levels. In addition, CEQA requires that all known environmental effects of a project be analyzed, including the potential environmental noise impacts.

The State of California's noise insulation standards are codified in the California Code of Regulations, Title 24, Building Standards Administrative Code, Part 2, and the California Building Code. These noise standards are applied to new construction in California for controlling interior noise levels resulting from exterior noise sources. The regulations specify that acoustical studies must be prepared when noise-sensitive structures, such as residential buildings, schools, or hospitals, are developed near major transportation noise sources, and where such noise sources create an exterior noise level of 60 dBA CNEL or higher. Acoustical studies that accompany building plans for noise-sensitive land uses must demonstrate that the structure has been designed to limit interior noise in habitable rooms to acceptable noise levels. For new residential buildings, schools, and hospitals, the acceptable interior noise limit for new construction is 45 dBA CNEL.

[4]FTA, *Transit Noise and Vibration Impact Assessment*, September 2018.

Vibration. There are no State standards applicable to project-related vibration.

Local

Noise. The City has established policies and regulations concerning the generation and control of noise that could adversely affect its citizens and noise-sensitive land uses. The City has adopted a Noise Element of the General Plan to minimize noise impacts on the community and to coordinate with surrounding jurisdictions and other entities regarding noise control. The Noise Element identifies noise-sensitive land uses, establishes compatibility guidelines for land use and noise, and identifies goals and policies to minimize the impacts of excessive noise levels throughout the community. Relevant goals and policies are as follows:

Objective 1: Land Use Compatibility: Ensure the compatibility of adjacent land uses with regard to noise sources and receptors.

Policy 1.A: Ensure the consistent application of adopted noise standards and criteria in the review of all discretionary land use decisions.

Policy 1.D: Investigate the opportunity to construction barriers to mitigate sound emissions where necessary and where feasible.

Objective 2: Stationary Noise Sources: Protect those areas that are or may be subject to unacceptable noise from stationary noise sources.

Policy 2.B: Require addition of noise reduction features to all existing and proposed stationary-related noise sources which exceed established noise standards to reduce impacts on sensitive land uses.

Policy 3.F: Limit truck movements to those arterials designed to handle the traffic, and those located farther from noise sensitive areas.

The Noise Element also includes exterior and interior noise standards for various land uses within the City, as shown in **Table 1**.

TABLE 1: CITY OF CULVER CITY EXTERIOR AND INTERIOR NOISE STANDARDS

Proposed Land Use Categories		Design Standard (dBA, CNEL)	
Categories	**Uses**	**Interior**	**Exterior**
Residential	Single Family, Duplex Multiple Family	45	65

SOURCE: City of Culver City General Plan, *Noise Element*, 1995.

The City has established provisions within the Culver City Municipal Code (CCMC) to control excessive noise generated within the City. Chapter 9.07 (Noise Regulations) of the CCMC is the Noise Ordinance for the City. Section 9.04.015 (H) includes regulations regarding noise disturbances. Construction noise is regulated by Section 9.07.035 (Construction) of the CCMC. The City exempts construction noise generated during the following hours: Mondays through Fridays 8:00 a.m. to 8:00 p.m., 9:00 a.m. to 7:00 p.m. on Saturdays, and 10:00 a.m. to 7:00 p.m. on Sundays.

Regarding permanent noise-generating activities, the CCMC establishes several standards to control unnecessary, excessive, and annoying noise and vibration in the city. Standards relevant to the CEQA analysis are provided in the following discussion.

- Section 9.04.015(H)(2) prohibits musical instruments, radios, and similar noise generating devices in or adjacent to residential districts during the hours of 10:00 p.m. to 8:00 a.m. when the adjoining building is nearer than 200 feet.
- Section 9.04.015(H)(4) regulates mechanical noise near residential zones. The use of operation of any mechanical device between the hours of 8:00 p.m. to 8:00 a.m. which generates any loud or unusual noise which disturbs the peace of residences in a residentially zoned neighborhood is prohibited.
- Section 9.07.055 (Amplified Sounds) regulated amplified sound within the City. Amplified sound is prohibited which is audible at a distance of 50 feet beyond the subject's property line without first filing an application and obtaining a permit.

Vibration. The CCMC does not include quantitative relevant vibration standards.

EXISTING CONDITIONS

The project site is primarily surrounded by residential uses and Veterans Memorial Park to the north. Single-family residences are located adjacent to the east, south, and to the west across Culver Boulevard. The Culver City Rock Mineral Club, Scout House and Culver City Paddle Tennis Courts are located adjacent to the south. The existing noise levels were monitored on Wednesday October 21, 2020 from 10:00 a.m. to 1:00 p.m. in 15-minute increments. This time of day represents a typical construction time without the added noise source of peak hour traffic. Monitored noise levels ranged from 50.7 to 68.0 dBA L_{eq}. The monitoring locations are shown in **Figure 4** and monitored noise levels are shown in **Table 2**.

TABLE 2: EXISTING AMBIENT NOISE LEVELS

Noise Measurement Site (Figure 4)	Noise Monitoring Location	Noise Level (dBA, L_{eq})
1	Residence (4037 Coogan Cir.)	51.1
2	Culver City Scout House (10866 Culver Blvd.)	68.0
3	Alley to East of Project Site	52.4

Wende Museum of the Cold War Project
Noise and Vibration Impacts Assessment

THE WENDE MUSEUM

FIGURE 3

NOISE MONITORING LOCATIONS AND SENSITIVE RECEPTORS

SENSITIVE RECEPTORS

Noise- and vibration-sensitive land uses are locations where people reside or where the presence of unwanted sound could adversely affect the use of the land. Residences, schools, hospitals, guest lodging, libraries, and some passive recreation areas would each be considered noise- and vibration-sensitive and may warrant unique measures for protection from intruding noise. Sensitive receptors within 500 feet of the project site have been identified and are shown in **Figure 3** and include:

- Residences located adjacent to the southwest and east;
- Culver City Scout House adjacent to the south;
- Residences located approximately 200 feet to the west;
- Residences located approximately 200 feet to the east;
- Residences located approximately 300 feet to the east;
- Residences located approximately 300 feet to the south;
- Residences located approximately 330 feet to the southwest;
- Residences located approximately 370 feet to the west;
- Residences located approximately 450 feet to the east; and
- Residences located approximately 500 feet to the west.

THRESHOLDS OF SIGNIFICANCE

The assessment has considered the potential to result in significant environmental impacts related to noise or vibration in the context of the Appendix G Environmental Checklist criteria of the CEQA Statute and Guidelines. Implementation of the proposed project may result in a significant environmental impact related to noise and vibration if it would:

a) Result in the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;

b) Result in the generation of excessive ground-borne vibration or ground-borne noise levels; and/or

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels.

Noise

In accordance with City standards, the proposed project would result in a significant noise impact if:

- Construction noise would occur outside the hours of Mondays through Fridays 8:00 a.m. to 8:00 p.m., 9:00 a.m. to 7:00 p.m. on Saturdays, and 10:00 a.m. to 7:00 p.m. on Sundays.
- Operational noise levels at nearby residential land uses would exceed an exterior noise level 65 dBA CNEL and/or an interior noise level of 45 dBA CNEL.
- Operational noise levels at nearby meeting hall land uses would exceed an interior noise level 45 dBA CNEL. The Culver City Scout House is assumed to be most similar to a meeting hall because this is one of the locations where scout troops meet for activities and discussions.

Vibration

The City has not adopted vibration standards. The FTA impact criterion for building damage is used to determine significance in lieu of a quantitative City standard. The proposed project would result in a significant vibration impact if:

- Construction activities would generate vibration levels that would exceed 0.2 inches per second at off-site structures; and/or
- Construction activities would generate vibration levels that would exceed 0.12 inches per second at historic properties.

METHODOLOGY

The noise and vibration analysis consider construction and operational sources. The potential for impacts were considered in a combined analysis assuming that the proposed project could be built in one stage. This represents a conservative analysis with construction equipment located throughout the project site. Similarly, operational activities would occur simultaneously throughout the project site in the event the proposed project were to be constructed in one stage. Noise levels associated with typical construction equipment were obtained from the Federal Highway Administration (FHWA) Roadway Construction Noise Model (RCNM).[5] This model predicts noise from construction based on a compilation of empirical data and the application of acoustical propagation formulas. Maximum equipment noise levels were adjusted based on anticipated percent of use. Formula (1) is the noise distance attenuation formula. According to Caltrans guidance, air temperature and humidity affect molecular absorption differently depending on the frequency spectrum and can vary significantly over long distances in a complex manner. Molecular absorption in air also reduces noise levels with distance. According to Caltrans, this process only accounts for about 1 dBA per 1,000 feet, which is an inaudible and negligible difference in noise levels. Noise levels have been estimated using a decrease of 6 dBA over hard surfaces for each doubling of the distance. Formula (2) is the logarithmic addition formula for noise levels. The methodology and formulas obtained from the Caltrans Technical Noise Supplement can be viewed below. Formula (3) relates to vibration attenuation over distance and was obtained from the FTA Transit Noise and Vibration Impact Assessment Guidance.

(1) Noise Distance Attenuation Formula: $dBA_2 = dBA_1 + 20 \times LOG_{10} (D_1/D_2)$

Where:

dBA_1 *= Noise level at the reference distance of 50 feet*

dBA_2 *= Noise level at the receptor*

D_1 *= Reference distance (50 feet)*

D_2 *= Distance from source to receptor (measured distance)*

(2) Logarithmic Noise Level Addition Formula: Nc = 10 x LOG10 ((10^(N1/10)) + (10^(N2/10)))

Where:

Nc = Combined noise level

N1 = Noise level one

N2 = Noise level two

[5]FHWA, *Roadway Construction Noise Model*, Version 1.1, August 2008.

Vibration levels were estimated using example vibration levels and propagation formulas provided by FTA.[6] Vibration damage is assessed using Formula (3).

(3) Vibration Damage Attenuation Formula: $PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$

Where:

PPV_{equip} *= Peak particles velocity in inches per second of the equipment adjusted for distance*

PPV_{ref} *= Reference vibration level in inches per second at 25 feet*

D = Distance from the equipment to the receptor in feet

Operational stationary noise assessed includes mechanical equipment such as heating, ventilation, and air conditioning equipment (HVAC), outdoor open space noise and parking noise. Operational mobile noise was assessed qualitatively following Caltrans guidance. Operational noise at outdoor open space was assessed assuming conversational noise would be the primary noise source.

IMPACT ASSESSMENT

a) Would the proposed project result in the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

The impact analysis is predicated on the location of noise- and vibration-sensitive land uses and the existing setting. Sensitive receptors are locations where people reside or where the presence of unwanted sound could adversely affect the use of the land. They typically include residences, schools, hospitals, guest lodging, libraries, and some passive recreation areas. The project area is primarily located adjacent to residential land uses.

Construction

Less-Than-Significant Impact. The proposed project would be constructed in a similar manner as other urban infill projects located in the City. A mix of typical construction equipment would be used to clear the development site, construct and reconfigure the structures. Specific construction equipment has not been identified at this point in the approval process. It is assumed that the proposed project would use standard pieces of equipment such as backhoes, loaders, compressors, and trucks. Pile driving would not be required to set the foundations. Construction noise levels were calculated using the FHWA RCNM.

Phase One was already completed and no new construction activity is proposed at the Armory Building. Phase Two construction would occur next to the existing A-frame building and would involve the demolition of the adjacent structure, the construction of a new one, and the expansion of the existing Museum garden. Phase Two construction activities would occur on the western side of the A-frame building, setback approximately 60 feet from residential uses along the alleyway. The A-frame building would block the line-of-sight of construction equipment to the closest residences across the alley, reducing construction noise levels. Courtyard construction activities may occur closer to the alleyway, but would be more limited in scope regarding construction equipment used (e.g. small bulldozer, small backhoe). Additionally, the residences to the east, across the alley, include masonry walls approximately 8-feet in height between them and the Project Site which would further reduce construction noise at the residences. Phase Three of construction would involve the construction of approximately six single-story

[6]FTA, *Transit Noise and Vibration Impact Assessment*, September 2018.

affordable housing units that would involve the use of smaller and a reduced number of construction equipment than Phase Two.

Table 3 summarizes noise levels produced by construction equipment that is commonly used for urban infill projects. Noise levels would fluctuate depending on equipment type, horsepower, and atmospheric conditions, among other factors. Construction equipment is expected to generate noise levels ranging from approximately 70.3 dBA to 82.6 dBA L_{eq} at a distance of 50 feet, and noise produced by construction equipment would be reduced over distance at a rate of about 6 dB per doubling of distance.

TABLE 3: CONSTRUCTION EQUIPMENT NOISE LEVEL RANGES

Construction Equipment	Noise Levels at 50 feet (dBA)
Backhoe	73.6
Compactor	76.2
Compressor (air)	73.7
Concrete Mixer Truck	74.8
Concrete Saw	82.6
Excavator	76.7
Flat Bed Truck	70.3
Front End Loader	75.1
Generator	77.6
Gradall (forklift)	79.4
Grader	81.0
Paver	74.2
Pickup Truck	71.0
Roller	73.0
Scraper	79.6

SOURCE: FHWA, *RCNM Version 1.1*, 2008.

Table 4 takes into account that multiple pieces of construction equipment would be operating simultaneously. When considered as an entire process with multiple pieces of equipment, project-related activity (i.e., ground clearing and site preparation) would generate noise levels between 78 and 89 dBA L_{eq} at 50 feet.

TABLE 4: TYPICAL OUTDOOR CONSTRUCTION NOISE LEVELS

Construction Method	Noise Level at 50 feet (dBA, L_{eq})
Ground Clearing	84
Site Preparation	89
Foundations	78
Structural	85
Finishing	89

SOURCE: USEPA, *Noise from Construction Equipment and Operations, Building Equipment and Home Appliances*, PB 206717, 1971.

Daytime construction noise is not typically a concern for human health and is a common occurrence within the urban environment. The impact analysis is based on the construction time limits in the CCMC including the allowable hours of hours of construction. Construction activity would occur within the allowable hours of construction including Mondays through Fridays 8:00 a.m. to 8:00 p.m., 9:00 a.m. to

7:00 p.m. on Saturdays, and 10:00 a.m. to 7:00 p.m. on Sundays. Construction noise is exempt per the provisions of Section 9.07.035 of the CCMC as long as construction activities are limited to the allowable hours. The proposed project would include a construction management plan with provisions requiring the following: 1) all construction equipment to be operated with an exhaust muffler and sound control devices that meet or exceed those provided on the original equipment, 2) proper maintenance of construction equipment, 3) staging of construction material deliveries behind fencing, 4) stationary source equipment to be located the greatest distance from the public right-of-way, and 5) construction workers to be respectful of the surrounding neighborhood. Therefore, the proposed project would result in a less-than-significant impact related to construction noise.

Operations

Less-Than-Significant Impact. Stationary noise sources related to long-term operations include mechanical equipment, courtyard, parking activity, and automobiles.

Heating, Ventilation, and Air Conditioning (HVAC) Noise

Mechanical equipment typically generates noise levels of approximately 60 dBA at 50 feet.[7] In addition, mechanical equipment would be located on rooftops, screened from view as much as possible, and enclosed within a structure which would reduce noise levels reduced by at least 10 dBA, resulting in a noise level of 50 dBA at 50 feet. Mechanical equipment is regulated by Section 9.04.015 (H)(4) of the CCMC, which prohibits the operations of any mechanical device that would present a loud or unusual noise that disturbs the peace of nearby residences. HVAC equipment is currently being operated at existing museum structures; the proposed project would include similar equipment and would not create new loud or unusual noise sources. HVAC equipment would typically operate during daytime hours and would not result in the creation of a 24-hour noise source. As shown in **Table 5**, HVAC equipment would not generate audible noise at offsite land uses. HVAC noise would not exceed the residential exterior standards of 65 dBA CNEL or the interior standards of 45 dBA CNEL at the residences to the east along the alley adjacent to the project site. HVAC noise would also not exceed the meeting hall interior noise standard of 45 dBA CNEL at the Culver City Scout House to the southwest. Therefore, the proposed project would result in a less-than-significant impact related to mechanical equipment noise.

TABLE 5: HVAC NOISE ANALYSIS

Sensitive Receptor	Distance (Feet) /a/	Exterior HVAC Noise Level (dBA, L_{eq})	Interior HVAC Noise Level (dBA, L_{eq}) /b/
Residences adjacent to the east	60	48.4	28.4
Culver City Scout House adjacent to the southwest	20	58.0	38.0

/a/ Distance from HVAC equipment located near the center of rooftop to nearest sensitive receptor.
/b/ Standard building construction results in an exterior to interior noise reduction of approximately 20 dB.
SOURCE: TAHA, 2020.

Outdoor Open Space Noise

The proposed project would include street level landscaping central outdoor spaces which would encourage visitors to walk the museum grounds and may include a rooftop garden. The rooftop garden would be situated on the Culver Boulevard side of the Phase Two project, away from residences located along the alleyway to the east. The primary source of noise related to these uses would be conversational

[7]Cowan, James P., *Handbook of Environmental Acoustics*, 1994.

noise. A person speaking in a normal voice generates a noise level of approximately 60 dBA at 3 feet.[8] Visitors would be dispersed throughout the museum area and would not present a concentrated noise source. Furthermore, the museum would operate during daytime hours and would not result in the creation of a 24-hour noise source.

The existing courtyard garden at the Museum (Phase One) would be expanded to establish continuity between the new development and the existing Museum and sculpture garden. The Wende will continue to operate film screenings, health and wellness classes, gatherings, music and dance performances, museum installations, family day activities, art lessons, exercise and aerobics, gardening and landscaping, demonstrations, readings, lectures, presentations, breakfasts, lunches and dinners, coffee and tea, convening, conferences, and other activities related to a cultural center in the garden. The size and nature of these events, including the continued use of amplified sound, will remain unchanged.

The distance from the edge of the courtyard to the residences adjacent to the east is approximately 30 feet. Conversational noise at this distance would be approximately 40.0 dBA. Noise associated with the proposed improvements to the existing courtyard would be similar to noise produced by the existing courtyard. Improvements to the courtyard are not anticipated to result in an increase in noise above existing noise levels. The residences to the east also include masonry walls approximately 8-feet in height between them and the project site, which would further reduce ground level noise from the courtyard.

As shown in **Table 6**, outdoor open space noise would not exceed the residential exterior standards of 65 dBA CNEL or the interior standards of 45 dBA CNEL at the residences to the east along the alleyway. Outdoor open space noise would also not exceed the meeting hall interior noise standard of 45 dBA CNEL at the Culver City Scout House to the southwest. Therefore, the proposed project would result in a less-than-significant impact related to outdoor open space noise.

TABLE 6: OUTDOOR OPEN SPACE NOISE ANALYSIS

Sensitive Receptor	Distance (Feet) /a/	Exterior Noise Level (dBA, L_{eq})	Interior Noise Level (dBA, L_{eq}) /a/
MUSEUM COURTYARD			
Residences adjacent to the east	30	40.0	20.0
ROOFTOP GARDEN			
Residences adjacent to the east	60	34.0	14.0
Culver City Scout House adjacent to the southwest	60	34.0	14.0

/a/ Distance of activity in outdoor space to nearest sensitive receptor.
/b/ Standard building construction results in a exterior to interior noise reduction of approximately 20 dB.
SOURCE: TAHA, 2020.

Parking Noise

Passenger vehicles traveling at 10 miles per hour within the surface parking would generate a noise level of approximately 44 dBA at 50 feet. The nearest residences are located approximately 140 feet to the north of the center of the parking lot. The proposed project would not involve the construction of a new parking lot and parking noise would be similar to existing parking lot. The total occupancy of the site is not expected to increase above existing levels. Furthermore, the museum would operate during daytime

[8] Engineering Tool Box, *Voice Level at Distance*, available https://www.engineeringtoolbox.com/voice-level-d_938.html, accessed October 20, 2020.

hours and would not result in the creation of a 24-hour noise source. Parking noise would not exceed the exterior standard of 65 dBA CNEL or the interior standard of 45 dBA CNEL. Therefore, the proposed project would result in a less-than-significant impact related to parking noise.

Mobile Noise

Another potential source of project noise is mobile noise associated with resident trips. The proposed project would generate 77 new daily vehicle trips (expansion of the Wende Museum would generate up to 33 daily vehicle trips and the six affordable housing units would generate up to 44 daily vehicle trips). The proposed project's trip generation was below the City's 250 daily trip threshold and does not require a traffic study. Access to the project site would be along Culver Boulevard, which is a primary arterial street. According to a traffic study prepared for a nearby project in 2016, the existing traffic volume along Culver Boulevard was 2,090 AM peak hour trips and 2,145 PM peak hour trips.[9] Caltrans has stated that a doubling of traffic volumes on a roadway segment is typically needed to audibly increase traffic noise. Based on the volume of existing trips, which are likely higher as of 2020 due to increased development in Culver City, the proposed project would not double traffic volumes on Culver Boulevard and therefore would not result in an audible increase in traffic noise. The proposed project would not result in a long-term and permanent noise impact.

b) Would the proposed project result in generation of excessive ground-borne vibration or ground-borne noise levels?

Construction

Less-Than-Significant Impact. Construction activity can generate varying degrees of vibration, depending on the procedure and equipment. Equipment movements generate vibrations that spread through the ground and diminish in amplitude with distance from the source. The effect on buildings located in the vicinity of a construction site often varies depending on soil type, ground strata, and construction characteristics of the receiver building(s). The results from vibration can range from no perceptible effects at the lowest vibration levels, to low rumbling sounds and perceptible vibration at moderate levels, and to slight damage at the highest levels. In most cases, the primary concern regarding construction vibration relates to damage.

Vibration levels for various types of construction equipment with an average source level reported in terms of velocity are shown in **Table 7**. Equipment that would be utilized during Phase 2 and Phase 3 would be different. During Phase 2, due to the size of the project site, a large bulldozer would likely be used, which generates a vibration level of approximately 0.089 inches per second at 25 feet. Phase 3 would involve the construction of six affordable housing units on the community gardens plot. Due to the small size of the lot, approximately 0.1 acre, the equipment would be most similar to a small bulldozer which generates a vibration level of 0.003 inches per second at 25 feet.

TABLE 7: TYPICAL OUTDOOR CONSTRUCTION VIBRATION LEVELS

Equipment	PPV at 25 feet (Inches/Second)
Jackhammer	0.035
Large Bulldozer	0.089
Loaded Trucks	0.076
Small Bulldozer	0.003

SOURCE: FTA, *Transit Noise and Vibration Impact Assessment*, September 2018.

[9] Raju Associates Inc., *Traffic Study for the 8777 Washington Boulevard Project*, March 2017.

The nearest structures to Phase 2 would be the residences approximately 20 feet to the east across an alley. Based on visual characteristics of adjacent structures (e.g., age), the adjacent building foundations are assumed to be constructed of non-engineered concrete and masonry. According to the FTA guidance, these buildings can withstand up to 0.2 inches per second without experiencing damage. The nearest structure during Phase 3 would be the Culver City Scout House approximately 15 feet to the southwest. The building was constructed in approximately 1930 and is possibly historic. Therefore, the applicable threshold is 0.12 inches per second, which is appropriate for historic structures. As shown in **Table 8**, the vibration damage threshold would not be exceeded at the residences to the east or the Culver City Scout House. Therefore, impacts related to on-site construction vibration would be less-than-significant.

TABLE 8: VIBRATION LEVELS AT NEARBY STRUCTURES

Structure	Distance (feet) /a/	Reference PPV at 25 feet (Inches/Second)	PPV at Structure (Inches/Second)	Threshold	Exceed Threshold?
Culver City Scout House to the southwest	15	0.003	0.006	0.12	No
Residences adjacent to the east	20	0.089	0.124	0.2	No

/a/ Distance of construction equipment to structure.
SOURCE: FTA, *Transit Noise and Vibration Impact Assessment*, September 2018.

In addition to on-site construction activities, construction trucks on the roadway network have the potential to expose vibration-sensitive land uses. Rubber-tired vehicles, including trucks, rarely generate perceptible vibration.[10] It is not anticipated that project-related trucks would generate perceptible vibration adjacent to the roadway network. Therefore, no impact would occur related to off-site construction vibration.

Operations

No Impact. The proposed project would not include a significant source of permanent vibration. Project-related vehicle trips could generate vibration, although similar to the existing condition, roadway vibration from passenger vehicles would not be perceptible outside of the roadway right-of-way. Therefore, no impact would occur related to operational vibration.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels?

No Impact. The project site is not located within an airport land use plan nor is it located within two miles of a private airstrip or public airport. There is no potential for the proposed project to expose people working or residing in the area to excessive aircraft noise. Therefore, no impact would occur.

Attachment D
Air Quality Technical Report

Technical Memorandum

TO: Wende Museum of the Cold War
C/O Justin Jampol, Founder/Executive Director

FROM: Terry A. Hayes Associates Inc.

DATE: June 7, 2021

RE: Air Quality Impacts Assessment for the Wende Museum of the Cold War Project

SUMMARY

The purpose of this Technical Memorandum is to evaluate potential air quality impacts in accordance with California Environmental Quality Act (CEQA) requirements for expansion of the Wende Museum of the Cold War Project (proposed project). The proposed project would not result in a significant air quality impact in the context of the Appendix G Environmental Checklist criteria of the CEQA Guidelines during construction or operational activities.

PROJECT DESCRIPTION

The proposed project would amend the Wende Comprehensive Plan for an area consisting of 49,572 square feet (21 lots). **Figure 1** show the Regional Location and the Project Location. Phase One, which is already completed, includes Lots 14-30 (approximately 38,305 square feet). Phase One involved the adaptive reuse of an existing 13,073 square foot Armory building located at 10808 Culver Boulevard which is currently used as a museum, offices, storage, permanent and temporary exhibition space, and event space (the Museum). The Museum is served by 305 existing parking spaces. Phase One also included the redevelopment of parking into a sculpture garden.

Phase Two consists of the redevelopment of 6,760 square feet, currently developed with an existing 2,200 square foot two-story building and an existing 1,920 square foot A-Frame building. Phase Two involves the development of a Creative Community Center (CCC) through the demolition of the 2,200 square foot building, the adaptive re-use of the 1,920 square foot building and construction of 5,102 square feet of new development. The new 7,022 square foot CCC will contain a theater/multipurpose space in the A-Frame portion, along with a multi-purpose space, classrooms, a demonstration garden, meeting rooms, offices and ancillary spaces. Phase Two also includes street level landscaping and sculpture, along with a rooftop garden. The existing garden at the Museum will be expanded to establish continuity between the new development and the existing Museum and sculpture garden. Phase Two contains 2,719 square feet of hardscape and 1,466 square feet of landscaping. Some of the Museum's existing functions, such as offices and event space will be moved to the CCC. The Wende will hire a full-time Program Coordinator for 10858 Culver Blvd to ensure that major events never occur at the same time at the Museum and at the CCC. Phase Two will be served by 305 parking spaces.

Phase Three is a City initiated project consisting of the development of 4,507 square feet, currently being used as a community garden. Phase Three involves the development of up to six affordable housing units and redevelopment of the community garden. Phase Three will be served by 284 parking spaces. **Figure 2** illustrate the site plan.

FIGURE 2

SITE PLAN AND GROUND FLOOR PLAN

Construction of the proposed project is anticipated to begin in July 2021and take approximately 12 months to complete, concluding in early July 2022. The construction period would include demolition and site preparation activities, installation of building foundations and utilities, and installation of landscaping and hardscape elements. Construction activities do not include significant excavation and export of soils. Approximately 2,200 square feet of building floor area will be demolished and removed from the site.

AIR QUALITY TOPICAL BACKGROUND

Air quality is a general characterization of how levels of air pollution and other atmospheric conditions can affect public health and the environment. Through decades of rigorous scientific research, the United States Environmental Protection Agency (USEPA) identified seven specific air pollutants that are environmentally prevalent and produced by human activities to be of concern with respect to health and welfare of the public. These specific pollutants, known as criteria air pollutants, are pollutants for which the federal and State governments have established ambient air quality standards—or criteria—for outdoor concentrations to protect public health. These pollutants are common byproducts of human activities and have been documented through scientific research to cause various adverse health effect outcomes. The federal ambient concentration criteria are known as the National Ambient Air Quality Standards (NAAQS), and the California ambient concentration criteria are referred to as the California Ambient Air Quality Standards (CAAQS). The criteria air pollutants regulated at the federal jurisdiction include ground-level ozone (O_3), nitrogen dioxide (NO_2), carbon monoxide (CO), sulfur dioxide (SO_2), respirable particulate matter ten microns or less in diameter (PM_{10}), fine particulate matter 2.5 microns or less in diameter ($PM_{2.5}$), and lead (Pb). In addition to the federal criteria pollutants, the State regulates visibility-reducing particles, sulfates ($-SO_4^{2-}$), hydrogen sulfide (H_2S), and vinyl chloride (VC).

In addition to the criteria pollutants, other classes of air pollutants have been identified, studied, and determined to cause adverse health effects. Toxic air contaminants (TACs) are generally defined as those contaminants that are known or suspected to cause serious health problems, but do not have a corresponding ambient air quality standard. Some TACs are also defined as an air pollutant that may increase a person's risk of developing cancer and/or other serious health effects; however, the emission of a toxic chemical does not automatically create a health hazard. Carcinogenic risks resulting from TAC exposure, for example, are typically evaluated over an exposure period of decade. Air toxics include, but are not limited to, diesel PM, metals, gases absorbed by particles, and certain vapors from fuels and other sources. Sources of substantial TAC emissions typically include large stationary industrial facilities such as petroleum refineries and locations of concentrated mobile sources such as distribution centers and heavily trafficked highways that are used by a large number of diesel-fueled vehicles.

REGULATORY FRAMEWORK

Federal

The Clean Air Act (CAA) governs air quality at the national level and the USEPA is responsible for administering the provisions in the CAA. The USEPA is authorized to establish the NAAQS that set protective limits on concentrations of air pollutants in ambient air. Enforcement of the NAAQS is required under the 1977 CAA and subsequent amendments. The CAA grants the USEPA authority to designate areas as attainment, nonattainment, or maintenance (previously nonattainment and currently attainment) for each criteria pollutant based on whether ambient concentrations have been consistently below the corresponding NAAQS on a regional scale relying upon air monitoring data from the most recent three-year period. The USEPA requires each state with nonattainment areas to prepare and submit a State Implementation Plan (SIP) that demonstrates the means to attain the federal standards through emissions control strategies. The SIP must

integrate federal, State, and local plan components and regulations to identify specific measures to reduce pollution at the state and regional scale, using a combination of performance standards and market-based programs within the timeframe identified in the SIP. **Table 1** presents the NAAQS for each criteria pollutant along with the averaging periods. The proposed project is located in the Los Angeles County portion of the South Coast Air Basin (SCAB), which is currently designated nonattainment of the NAAQS for O_3 and $PM_{2.5}$.

State

In addition to being subject to the requirements of the CAA, air quality in California is also governed by more stringent regulations under the California Clean Air Act (CCAA). In California, the CCAA is administered by the California Air Resources Board (CARB) at the State level and by air quality management districts and air pollution control districts at the regional and local levels. CARB, which became part of the California Environmental Protection Agency (Cal/EPA) in 1991, is responsible for meeting the State requirements of the CAA, administering the CCAA, and establishing the California Ambient Air Quality Standards (CAAQS). The CCAA, as amended in 1992, requires all air districts in the State to endeavor to achieve and maintain the CAAQS. The CCAA requires CARB to designate areas within California as either attainment or nonattainment for each criteria pollutant based on whether the CAAQS have been achieved. Under the CCAA, areas are designated as nonattainment for a pollutant if air quality data shows that a State standard for the pollutant was violated at least once during the previous three calendar years. Exceedances that are affected by highly irregular or infrequent events are not considered violations of a State standard and are not used as a basis for designating areas as nonattainment. The CAAQS are also summarized in **Table 1**, which presents the attainment status designations for the Los Angeles County portion of the SCAB. The SCAB does not meet the CAAQS for O_3, PM_{10}, and $PM_{2.5}$.

CARB regulates mobile air pollution sources, such as motor vehicles. CARB is responsible for setting emission standards for vehicles sold in California and for other emission sources, such as consumer products and certain off-road equipment. CARB established passenger vehicle fuel specifications, which became effective in March 1996. CARB oversees the functions of local air pollution control districts and air quality management districts, which, in turn, administer air quality activities at the regional and county levels.

substances for review, the CARB must consider criteria relating to the risk of harm to public health, such as amount or potential amount of emissions, manner of and exposure to usage of the substance in California, persistence in the atmosphere, and ambient concentrations in the community.

Regional

The South Coast Air Quality Management District (SCAQMD) was created to coordinate air quality planning efforts in non-desert portions of Los Angeles, Riverside, and San Bernardino Counties, the Riverside County portion of the Salton Sea and Mojave Desert Air Basins, and Orange County. The SCAQMD is tasked with preparing regional programs and policies designed to improve air quality within the SCAB, which are assessed and published in the form of the Air Quality Management Plan (AQMP). The AQMP is updated every four years to evaluate the effectiveness of the adopted programs and policies and to forecast attainment dates for nonattainment pollutants to support the SIP based on measured regional air quality and anticipated implementation of new technologies and emissions reductions. The most recent publication is the 2016 AQMP, which is intended to serve as a regional blueprint for achieving the federal air quality standards and healthful air. The AQMP includes strategies to ensure that attainment deadlines are met, that public health is protected to the maximum extent feasible, and that the region is not faced with burdensome sanctions if the air quality standards are not met by the established date.

TABLE 1: AMBIENT AIR QUALITY STANDARDS AND ATTAINMENT STATUS DESIGNATIONS

Pollutant	Averaging Period	California		Federal	
		Standards (CAAQS)	Attainment Status	Standards (NAAQS)	Attainment Status
Ozone (O_3)	1-Hour Average	0.09 ppm (180 µg/m^3)	Nonattainment	--	--
	8-Hour Average	0.070 ppm (137 µg/m^3)	Nonattainment	0.070 ppm (137 µg/m^3)	Nonattainment
Carbon Monoxide (CO)	1-Hour Average	20 ppm (23 mg/m^3)	Attainment	35.0 ppm (40 mg/m^3)	Attainment
	8-Hour Average	9.0 ppm (10 mg/m^3)	Attainment	9.0 ppm (10 mg/m^3)	Attainment
Nitrogen Dioxide (NO_2)	1-Hour Average	0.18 ppm (338 µg/m^3)	Attainment	0.10 ppm (188 µg/m^3)	Attainment
	Annual Arithmetic Mean	0.03 ppm (57 µg/m^3)	Attainment	0.053 ppm (100 µg/m^3)	Attainment
Sulfur Dioxide (SO_2)	1-Hour Average	0.25 ppm (655 µg/m^3)	Attainment	0.075 ppm (196 µg/m^3)	Attainment
	24-Hour Average	0.04 ppm (105 µg/m^3)	Attainment	0.14 ppm (365 µg/m^3)	Attainment
	Annual Arithmetic Mean	--	--	0.030 ppm (80 µg/m^3)	Attainment
Respirable Particulate Matter (PM_{10})	24-Hour Average	50 µg/m^3	Nonattainment	150 µg/m^3	Attainment
	Annual Arithmetic Mean	20 µg/m^3	Nonattainment	--	--
Fine Particulate Matter ($PM_{2.5}$)	24-Hour Average	--	--	35 µg/m^3	Nonattainment
	Annual Arithmetic Mean	12 µg/m^3	Nonattainment	12.0 µg/m^3	Nonattainment
Lead (Pb)	30-day Average	1.5 µg/m^3	Attainment	--	--
	Calendar Quarter	--	--	1.5 µg/m^3	Attainment (Project Area)
	Rolling 3-Month Average	--	--	0.15 µg/m^3	Attainment (Project Area)
Sulfates ($-SO_4^{2-}$)	24-Hour Average	25 µg/m^3	Attainment	**No Federal Standards**	
Hydrogen Sulfide (H_2S)	1-Hour Average	0.03 ppm (42 µg/m^3)	Attainment		
Vinyl Chloride	24-Hour Average	0.01 ppm (26 µg/m^3)	Attainment		

ppm = parts per million; µg/m^3 = micrograms per cubic meter.
SOURCE: CARB, *Air Quality Standards and Area Designations*, December 3, 2019.

The California Toxic Air Contaminant Identification and Control Act created a program to reduce exposure to air toxics. The CARB is required to prioritize the identification and control of air toxics emissions. In selecting

The AQMP also includes an element that is related to transportation and sustainable communities planning. Pursuant to California Health and Safety Code Section 40450, the Southern California Association of Governments (SCAG) has the responsibility of preparing and approving the portions of the AQMP relating to regional demographic projections and integrated regional land use, housing, employment, and transportation programs, measures, and strategies. The analysis incorporated into the 2016 AQMP is based on the forecasts contained within the SCAG 2016–2040 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). SCAG has approved the 2020-2045 RTP/SCS, although these growth projections have not been incorporated by SCAQMD into the current AMQP. The SCAQMD has also established various rules to manage and improve air quality in the SCAB. The project would be required to comply with all applicable SCAQMD Rules and Regulations pertaining to construction activities, including, but not limited to:

Regulation IV – Prohibitions: This regulation sets forth the restrictions for visible emissions, odor nuisance, fugitive dust, various air emissions, fuel contaminants, start-up/shutdown exemptions and breakdown events, including the following rules directly applicable to the proposed project:

- Rule 401 (Visible Emissions) states that a person shall not discharge into the atmosphere from any single source of emission whatsoever any air contaminant for a period or periods aggregating more than three minutes in any one hour which is as dark or darker in shade as that designated No 1. On the Ringelmann Chart or of such opacity as to obscure an observer's view.
- Rule 402 (Nuisance) states that a person should not emit air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.
- Rule 403 (Fugitive Dust) controls fugitive dust through various requirements including, but not limited to, applying water in sufficient quantities to prevent the generation of visible dust plumes, applying soil binders to uncovered areas, reestablishing ground cover as quickly as possible, utilizing a wheel washing system to remove bulk material from tires and vehicle undercarriages before vehicles exit the project site, limiting vehicle speeds on unpaved roads to 15 miles per hour, and maintaining effective cover over exposed areas. Rule 403 also prohibits the release of fugitive dust emissions from any active operation, open storage piles, or disturbed surface area beyond the property line of the emission source and prohibits particulate matter deposits on public roadways.

EXISTING CONDITIONS

Local Climate

The SCAB is subject to high levels of air pollution due to the immense magnitude of emissions sources and the combination of topography, low mean atmospheric mixing height, and abundant sunshine. Although the SCAB has a semiarid climate, air near the surface is generally moist because of the presence of a shallow marine layer. With very low average wind speeds, there is a limited capacity to disperse air contaminants horizontally. The mountains and hills surrounding the SCAB contribute to the variation of rainfall, temperature, and winds throughout the region. During the spring and early summer, pollution produced during any one day is typically blown out of the SCAB through mountain passes or lifted by warm, vertical currents adjacent to mountain slopes. The vertical dispersion of air pollutants in the SCAB is limited by temperature inversions in the atmosphere close to the Earth's surface. The combination of stagnant wind conditions and

low inversions produces the greatest pollutant concentrations. On days of no inversion or high wind speeds, ambient air pollutant concentrations are lowest. During periods of low inversions and low wind speeds, air pollutants become more concentrated in urbanized areas with pollution sources of greater magnitude.

Monitored Pollutant Concentrations

Air quality within the SCAB region is characterized by concentrations of air pollutants measured at 37 monitoring stations located throughout the SCAQMD jurisdiction.[1] The SCAB is divided geographically into 38 source receptors areas (SRAs), each of which contains an air quality monitoring station with the exception of SRA 7. The SRA boundaries were drawn based on regional modeling considering proximity to the nearest air monitoring station, the local emission inventories, and surrounding topography. The proposed project site is located in SRA 2 (Northwest Los Angeles County Coastal). The monitoring station that collects ambient air quality data in SRA 2 is the West Los Angeles-Veterans Administration Monitoring Station, although this station only monitors O_3 and NO_2.[2] Based on project location and meteorological conditions, PM_{10} concentrations at the project site are best represented by data collected at the Los Angeles-Westchester Parkway monitoring station located in SRA 3 (Southwest Coastal LA County) and $PM_{2.5}$ concentrations are best represented by data collected at the Downtown Los Angeles Monitoring Station located in SRA 1 (Central Los Angeles County). The SCAQMD has discontinued permanent monitoring activities for ambient CO and SO_2 concentrations at most stations following an extended trend of concentrations decreasing and remaining well below established ambient air quality standards. **Table 2** displays concentrations of air pollutants measured between 2017–2019 in the project area. Air quality data for calendar year 2020 is not yet available.

TABLE 2: AMBIENT AIR QUALITY DATA

Pollutant	Air Quality Standards Comparison	Maximum Concentrations and Frequencies of Exceeded Standards		
		2017	2018	2019
Ozone (O_3)	Maximum 1-hr Concentration (ppm)	0.099	0.094	0.086
	# Days > 0.09 ppm (CAAQS)	1	0	0
	Maximum 8-hr Concentration (ppm)	0.077	0.073	0.075
	# Days > 0.07 ppm (NAAQS/CAAQS)	3	2	1
Nitrogen Dioxide (NO_2)	Maximum 1-hr Concentration (ppm)	0.056	0.065	0.049
	# Days > 0.180 ppm (CAAQS)	0	0	0
	# Days > 0.100 ppm (NAAQS)	0	0	0
Respirable Particulate Matter (PM_{10})	Maximum 24-hr Concentration (µg/m^3)	46.5	45.3	62.1
	# Days > 50 µg/m^3 (CAAQS)	0	0	2
	# Days > 150 µg/m^3 (NAAQS)	0	0	0
	Annual Concentration (µg/m^3)	20.2	17.6	19.7
	Exceed 20 µg/m^3 (CAAQS)?	Yes	No	No
Fine Particulate Matter ($PM_{2.5}$)	Maximum 24-hr Concentration (µg/m^3)	49.2	43.8	43.5
	# Days > 35 µg/m^3 (NAAQS)	5	3	1
	Annual Concentration (µg/m^3)	11.9	12.6	10.8
	Exceed 12.0 µg/m^3 (NAAQS)?	No	Yes	No
	Exceed 12.0 µg/m^3 (CAAQS)?	No	Yes	No

SOURCE: SCAQMD, *Historical Data By Year (2017, 2018, 2019 Air Quality Data Tables)*, accessed October 14, 2020.

[1]SCAQMD, *Annual Air Quality Monitoring Network Plan*, July 1, 2018.
[2]CARB, *Quality Assurance Air Monitoring Site Information*, September 14, 2020.

Consistent with the federal and State nonattainment designations, concentrations of O_3, PM_{10}, and $PM_{2.5}$ exceeded applicable federal and State air quality standards on numerous occasions during the three-year period. The nonattainment statuses for these pollutants represent ongoing cumulatively considerable air quality conditions. Emissions of NO_X and fine particles contribute to the formation of O_3 in the atmosphere and are therefore given special consideration for proposed projects under CEQA. Concentrations of NO_2 remained substantially below applicable standards throughout the monitoring period, demonstrating the continued attainment of the air quality standards. Ambient concentrations and emissions magnitudes of SO_X and CO have been reduced considerably through effective regulation and control strategies over the past several decades.

Sensitive Receptors

Some land uses are considered more sensitive to changes in air quality than others, depending on the population groups and the activities involved. The CARB has identified the following groups who are most likely to experience adverse health effects due to exposure to air pollution: children less than 14 years of age, the elderly over 65 years of age, athletes, and people with cardiovascular and chronic respiratory diseases. According to the SCAQMD, land uses that constitute sensitive receptors include residences, schools, playgrounds, childcare centers, athletic facilities, long-term health care facilities, rehabilitation centers, convalescent centers, and retirement homes. The SCAQMD recommends that air quality assessments consider the potential localized impacts to sensitive receptors at distances up to 500 meters (1,640 feet) from proposed projects, depending on the proximity of sensitive land uses. The proposed project is located in a developed urban setting surrounded by numerous land uses that qualify as sensitive receptors. The following receptors represent land uses mostly likely to be affected by the proposed project and is not a comprehensive list of all sensitive land uses within 500 meters of the project site. Concentrations of pollutants are typically highest near emission sources and dissipate with distance, therefore the closest sensitive receptors in each direction are considered. Sensitive receptors nearest to the project site include:

- Residences located adjacent to the south and east;
- Residences located approximately 200 feet to the west;
- Residences located approximately 200 feet to the east;
- Residences located approximately 300 feet to the east;
- Residences located approximately 300 feet to the south;
- Residences located approximately 330 feet to the southwest;
- Veterans Memorial Park located approximately 350 feet (center of park) to the east;
- Residences located approximately 370 feet to the west;
- Residences located approximately 450 feet to the east;
- Residences located approximately 500 feet to the west. and
- Culver City High School located approximately 1,500 feet to the south.

THRESHOLDS OF SIGNIFICANCE

The assessment has considered the potential to result in significant environmental impacts related to air quality in the context of the Appendix G Environmental Checklist criteria of the CEQA Statute and Guidelines. Implementation of the project may result in a significant impact related to air quality if it would:

a) Conflict with or obstruct implementation of the applicable air quality plan;

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard;

c) Expose sensitive receptors to substantial pollutant concentrations; and/or

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

The SCAQMD published a CEQA Air Quality Handbook to guide air quality assessments for CEQA projects within its jurisdiction. SCAQMD methodologies recommend that air pollutant emissions be analyzed in both regional and local contexts. Regional emissions refer to all emissions that would be associated with construction and operation of a project, while localized emissions refer to only those emissions that would be produced by sources located on the project site. To assist in the assessment of air pollutant emissions, the SCAQMD established maximum daily threshold values for air pollutant emissions from CEQA projects within the SCAB. The mass daily thresholds were derived using regional emissions modeling techniques to prevent the occurrence of air quality violations that would obstruct implementation of the AQMP and hinder efforts to improve regional air quality.

Table 3 presents the SCAQMD mass daily air quality significance thresholds for regional and localized emissions of regulated pollutants resulting from construction activities, as well as regional mass daily thresholds for operational emissions.[3] The localized construction thresholds are specific to SCAQMD SRA 2 for a one-acre construction site with sensitive receptors within 25 meters and were obtained from the SCAQMD localized significance threshold (LST) guidance document.[4,5] The LST values were derived from regionally-specific modeling of pollutant emissions and designed to prevent localized pollutant concentrations from exceeding applicable ambient air quality standards near construction sites based on existing ambient air quality. The mass daily emissions thresholds were established as screening criteria for emissions from proposed CEQA projects. The SCAQMD generally advises that a project generating maximum daily emissions of the pollutants shown in **Table 3** of lesser magnitude than the corresponding threshold values would not cause a significant air quality impact at the regional or local level. The SCAQMD recognizes that emissions for individual projects that remain below the thresholds shown in **Table 3** would be considered less than significant at the project level and would not be cumulatively considerable. If maximum daily emissions would exceed applicable threshold values during construction or operations, opportunities to mitigate and reduce those emissions are required to be explored and implemented as feasible.

TABLE 3: SCAQMD AIR QUALITY SIGNIFICANCE THRESHOLDS – MASS DAILY EMISSIONS

Pollutant	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
CONSTRUCTION						
Regional Threshold (lbs/day)	75	100	550	150	150	55
Localized Threshold (lbs/day)	--	103	562	--	4	3
OPERATION						
Regional Threshold (lbs/day)	55	55	550	150	150	55

Note: Construction LST values selected for a one-acre daily disturbance based on equipment inventory and 25-meter receptor distance in SRA 34.
SOURCE: SCAQMD, 2019; 2009.

[3]SCAQMD, *SCAQMD Air Quality Significance Thresholds – Mass Daily Thresholds*, April 2019.
[4]SCAQMD, *Final Localized Significance Threshold Methodology Appendix C Mass Rate Lookup Tables*, October 21, 2009.
[5]SCAQMD, *Fact Sheet for Applying CalEEMod to Localized Significance Thresholds*, 2008.

In addition to the mass daily thresholds for criteria pollutants and O_3 precursors, SCAQMD has established CEQA significance thresholds related to TACs and odorous emissions. As a diverse class of pollutants, TACs include many different pollutants with varying degrees of toxicity and that affect human health in different ways. Within the field of health risk assessment (HRA), carcinogenic risk and non-carcinogenic hazards can be determined based on multipollutant exposures. According to SCAQMD methodology, health effects from carcinogenic air toxics are described in terms of excess incremental individual cancer risk. "Individual Cancer Risk" is the likelihood that a person continuously exposed to TAC concentrations over a 70-year lifetime will contract cancer based on the use of standard risk assessment methodology. SCAQMD established a project-specific TAC carcinogenic exposure threshold of an incremental excess cancer risk of 10 cases per million. For non-carcinogenic TACs, the acute and chronic exposures should not exceed a combined calculated Hazard Index value of 1.0, based on pollutant-specific reference-exposure levels (RELs).

Construction and operation of certain land use development projects may create public nuisances related to visible dust plumes and odors. The SCAQMD air quality significance thresholds address odorous emissions by invoking compliance with SCAQMD Rule 402. A project may have a significant air quality impact if construction or operation of that project create a public nuisance condition in violation of SCAQMD Rule 402. Visible dust plumes are controlled through the enforcement of SCAQMD Rule 401 and SCAQMD Rule 403.

METHODOLOGY

Emissions of air pollutants that would be generated by short-term construction activities and future operations were calculated using the California Emissions Estimator Model (CalEEMod, Version 2016.3.2). CalEEMod is the preferred regulatory tool for estimating air pollutant emissions associated with land use developments in California. The land use inputs to CalEEMod for the proposed project included demolition of an approximately 2,200-square-foot building and construction of approximately 5,560 square feet of new space. The existing garden at the Wende would be expanded by approximately 3,000 square feet to connect the new development with the existing Museum and sculpture garden. In addition, the project would allow for the future development of six affordable housing units on the southern 4,506 square feet of the site. Air pollutant emissions that would be generated by construction and operation of the proposed project were estimated using the following approach.

Construction

Construction of the proposed project would last approximately 12 months, beginning in July 2021 and completing in July 2022. General construction stage include demolition and debris removal, site preparation and utilities installation, building construction, and hardscaping and architectural finishing. A summary of the proposed project construction schedule is provided in **Table 4**.

TABLE 4: PROPOSED PROJECT CONSTRUCTION SCHEDULE

Stage Number	Stage Name	Approx. Start	Approx. End	Approx. Duration (Weeks)
1	Demolition & Site Clearing	July 2021	July 2021	4
2	Site Preparation & Utilities	August 2021	August 2021	1
3	Construction	August 2021	June 2022	44
4	Paving & Architectural Finishing	June 2022	July 2022	3

SOURCE: TAHA, 2020.

For construction activities, CalEEMod allows the user to input project-specific information describing the size

of the project site, land uses to be developed, construction schedule, and the equipment and vehicle inventory. Sources of air pollutant emissions associated with proposed project construction include heavy-duty diesel equipment exhaust, fugitive dust generation from material movement, off-gassing of volatile compounds from architectural finishing, haul truck trips, vendor material delivery trips, and construction worker trips. **Table 5** presents a summary of activities and sources of air pollutants involved in construction of the proposed project. Detailed information related to the construction schedule and equipment and vehicle inventories can be found in the **Appendix**.

TABLE 5: CALEEMOD CONSTRUCTION EMISSIONS SOURCES

Stage(s)	Activity	Source(s)	Pollutants
All Stages	Off-Road Equipment Use	Engine Exhaust	VOC, NO_X, CO, SO_X, PM_{10}, $PM_{2.5}$
All Stages	On-Road Vehicle Trips	Engine Exhaust	VOC, NO_X, CO, SO_X, PM_{10}, $PM_{2.5}$
All Stages	On-Road Vehicle Trips	Engine Evaporative Losses	VOC
All Stages	On-Road Vehicle Trips	Brake & Tire Wear	PM_{10}, $PM_{2.5}$
All Stages	On-Road Vehicle Trips	Re-Entrained Road Dust	PM_{10}, $PM_{2.5}$
Demolition	Truck Loading	Fugitive Dust	PM_{10}, $PM_{2.5}$
Site Clearing	Ground Disturbance	Fugitive Dust (Dozers/Graders)	PM_{10}, $PM_{2.5}$
Building Construction	Architectural Coating	Off-Gassing (Evaporation)	VOC

SOURCE: CAPCOA, 2017.

Operations

CalEEMod was used to produce estimates of daily air pollutant emissions that would be generated by operational sources including on-site fugitive and area sources, indirect sources of emissions involved in the provision of energy to the project, and on-road mobile source emissions from project-related vehicle trips. On-site area source emissions would include VOC emissions from chemically formulated consumer products use and landscaping activities, while energy-related emissions would be associated with natural gas combustion. CalEEMod uses emission factors derived from extensive land use and utility surveys to estimate emissions associated with building facility operations. Expansion of the Wende Museum would generate up to 33 daily vehicle trips and the six affordable housing units would generate up to 44 daily vehicle trips. The proposed project would generate up to 77 daily vehicle trips. According to CalEEMod default trip lengths for the proposed land uses, the daily vehicle miles traveled (VMT) associated with proposed project operations would be approximately 645 miles. Operational emissions were estimated for the construction of the entire proposed project in one phase to present a cumulative worst-case emissions analysis. Detailed operational emissions data can be found in the technical **Appendix**.

IMPACT ASSESSMENT

The air quality impacts assessment individually addresses each of the Appendix G Environmental Checklist criteria for both short-term construction and future operation of the proposed project.

a) Would the proposed project conflict with or obstruct implementation of the applicable air quality plan?

The currently applicable air quality plan is the 2016 AQMP, which was developed in conjunction with regional growth projections incorporated into the SCAG 2016–2040 RTP/SCS. The ensuing discussions address potential air quality impacts in the context of the attainment timeline set forth in the 2016 AQMP and the underlying growth projections derived from the SCAG 2016–2040 RTP/SCS. Although SCAG has adopted

the 2020-2045 RTP/SCS, it has not been incorporated into the AQMP and not considered in the consistency analysis.

According to SCAQMD, there are two key indicators of evaluating consistency with the AQMP and whether a project may conflict with or obstruct its implementation:

1) Whether the proposed project would result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay timely attainment of air quality standards or the interim emission reductions specified in the air quality plan; and,

2) Whether the proposed project would exceed the forecasted growth incorporated into the AQMP.

Construction

Less-than-Significant Impact. Construction activity would not affect forecasted growth assumptions; therefore, the construction impacts assessment focuses on air quality violations. The first indicator is related to air quality violations, which are determined by an SCAQMD Air Quality Inspector when a business is out of compliance with applicable SCAQMD rule requirements, permit conditions or legal requirements, or with applicable state or federal air pollution regulations. Air quality violations typically involve large industrial facilities that emit vast quantities of highly regulated pollutants and are not common among typical land use development projects. Construction of the proposed project would be conducted in accordance with the best management practices (BMPs) provided in SCAQMD Regulation IV, Rule 401 (Visible Emissions) and Rule 403 (Fugitive Dust). The application of water as a dust suppressant to material stockpiles and disturbed ground areas would reduce fugitive dust emissions during construction activities by approximately 61 percent. All construction equipment and vehicles would be maintained and operated within manufacturer specifications to limit unnecessary emissions during use, and any vehicles traveling on unpaved surfaces would be required to limit their speed to 15 miles per hour or less. Construction of the proposed project would not have the potential to obstruct or conflict with implementation of the 2016 AQMP in the context of SCAQMD rule requirements.

Estimates of maximum daily air pollutant emissions that would be generated by construction activities can be used to demonstrate that the proposed project would not conflict with or obstruct implementation of the 2016 AQMP with regards to increasing the frequency or severity of existing air quality violations. The SCAQMD devised its mass daily thresholds of significance as a screening tool for determining the potential significance of air pollutant emissions from CEQA projects. **Table 6** presents the maximum daily regional emissions that would be generated by each construction activity. Maximum daily emissions during construction are compared to the applicable SCAQMD mass daily thresholds of significance. Construction of the proposed project would not generate daily emissions of criteria pollutants or O_3 precursors in excess of any SCAQMD regional threshold. Therefore, construction of the proposed project would not have the potential to result in a significant air quality impact related to air quality violations or obstructing timely implementation of the AQMP.

TABLE 6: PROPOSED PROJECT CONSTRUCTION EMISSIONS – REGIONAL ANALYSIS							
Stage	Source Location	Daily Emissions (lbs/day)					
		VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Demolition & Site Clearing	On-Site Emissions	0.8	7.3	7.6	<0.1	0.5	0.4

SOURCE: TAHA, 2020.							

Operations

Less-than-Significant Impact. The potential to interfere with the attainment of State and federal air quality standards is related to permanent sources of proposed project-related emissions. The predominant source of emissions would be attributed to mobile vehicle trips on the regional roadway network by visitors and residents of the new dwelling units. Operation of the proposed project would not create a new substantial stationary source of air pollutant emissions that could potentially cause air quality violations directly. Creative Community Center and affordable housing uses are not identified by the SCAQMD or the CARB as facilities that require special permitting due to the presence of large emissions sources. Future operation of the proposed project would involve emissions sources including on-road vehicle trips, area and fugitive sources such as consumer products and landscaping, and minor indirect emissions associated with the provision and consumption of energy and water resources, as well as solid waste disposal.

The air quality impacts assessment utilized CalEEMod to estimate the daily emissions of criteria pollutants and O_3 precursors that would be generated by operation of the proposed project. Proposed project operations would generate 75 daily vehicle trips and 645 daily VMT. **Table 7** presents the results of the operational emissions analysis prepared in CalEEMod. Operational emissions were estimated for the entire proposed project in one phase to present a cumulative worst-case emissions analysis. Daily emissions of criteria pollutants and O_3 precursors would remain substantially below the applicable SCAQMD mass daily thresholds. The results of the emissions modeling demonstrate that operation of the proposed project would not have the potential to create or contribute to new air quality violations or exacerbate existing violations throughout the SCAB, and would not delay timely attainment of the air quality standards as set forth in the 2016 AQMP.

TABLE 7: PROPOSED PROJECT OPERATIONAL EMISSIONS

Operational Emissions Source	Daily Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Area Sources	0.3	<0.1	0.5	<0.1	<0.1	<0.1
Energy Sources	<0.1	<0.1	<0.1	<0.1	<0.1	<0.1
Mobile Sources	0.1	0.4	1.6	<0.1	0.5	0.1

SOURCE: TAHA, 2020.

With regards to the AQMP growth projections, operation of the proposed project would introduce a Creative Community Center and up to six affordable housing units to the project site. It is not anticipated that the proposed project would generate new employment opportunities and the six housing units would not conflict with regional growth projections assessed in the SCAG 2016–2040 RTP/SCS that were used to develop the 2016 AQMP. The growth in population and households attributed to the proposed project would not disproportionately contribute to the City's growth in such a way that would render the population and household forecasts inaccurate. Operation of the proposed project would result in a less-than-significant impact related to regional growth projections accounted for in the AQMP.

b) Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard?

Construction

Less-than-Significant Impact. The SCAB is designated as nonattainment of the CAAQS and NAAQS for O_3, PM_{10}, and $PM_{2.5}$. Therefore, there is an ongoing cumulative regional impact associated with these air pollutants. As discussed above, the SCAQMD relies on the mass daily thresholds as a screening tool for evaluating potential cumulative impacts. Projects with daily emissions that exceed applicable SCAQMD thresholds during construction or operation would be considered potentially significant on both the project and cumulative scales. Conversely, the SCAQMD advises that projects with maximum daily emissions remaining below the project-specific mass daily thresholds would also not be considered cumulatively significant, even with the ongoing cumulative condition related to the nonattainment designations. As shown in **Table 6**, construction of the proposed project would not produce daily emissions of particulate matter or O_3 precursors in excess of the applicable SCAQMD thresholds. Therefore, construction of the proposed project would result in a less-than significant impact related to cumulatively considerable increases of nonattainment pollutants or their atmospheric precursors.

Operations

Less-than-Significant Impact. Similar to the assessment of potential air quality impacts during construction, the SCAQMD advises that daily project-related emissions of particulate matter and O_3 precursors that are below the project-specific mass daily thresholds should be considered less than significant in the cumulative context. As shown in **Table 7**, operation of the proposed project would not generate daily emissions of particulate matter (PM_{10} and $PM_{2.5}$) or O_3 precursors (VOC and NO_X) in excess of any applicable SCAQMD

threshold. Therefore, operation of the proposed project would result in a less-than-significant impact related to cumulatively considerable increases of nonattainment pollutants or their atmospheric precursors.

c) Would the proposed project expose sensitive receptors to substantial pollutant concentrations?

Construction

Less-than-Significant Impact. The project site is surrounded in close proximity by residences and Veterans Memorial Park that constitute sensitive receptors. The sensitive receptors surrounding the project site may be exposed to pollutant concentrations emanating from emissions sources involved in construction activities. The SCAQMD established an LST methodology to determine the likelihood of substantial criteria pollutant concentrations reaching sensitive receptor locations. Mobile source emissions on the roadway network are spread across long distances and do not directly affect receptors in close proximity to the project site. The LST methodology involves screening values for daily emissions of NO_X, CO, PM_{10}, and $PM_{2.5}$ that are generated exclusively by sources located on project sites. The LST values were determined using emissions modeling based on ambient air quality measured throughout the SCAB. If maximum daily emissions remain below the LST values during construction activities, it is highly unlikely that air pollutant concentrations in ambient air would reach substantial levels sufficient to create public health concerns for sensitive receptors. As shown in **Table 8** maximum daily emissions of criteria pollutants and ozone precursors would not exceed any applicable LST values. Therefore, construction of the proposed project would not result in exposure of sensitive receptors to substantial concentrations of criteria pollutants.

TABLE 8: PROPOSED PROJECT CONSTRUCTION EMISSIONS – LOCALIZED ANALYSIS

STAGE	On-Site Daily Emissions (lbs/day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Demolition & Site Clearing	7.3	7.6	0.5	0.4
Trenching/Utilities	10.8	7.0	0.7	0.5
Construction	8.1	8.4	0.4	0.4
Architectural Coating	7.2	9.2	0.4	0.3
LOCALIZED ANALYSIS				
Maximum Localized Daily Emissions	**10.8**	**9.2**	**0.7**	**0.5**
SRA 2 Localized Significance Threshold	103	562	4	3
Exceed Localized Threshold?	**No**	**No**	**No**	**No**

SOURCE: TAHA, 2020.

With regards to TAC emissions, carcinogenic risks, and non-carcinogenic hazards, the use of heavy-duty construction equipment and haul trucks during construction activities would release diesel PM to the atmosphere through exhaust emissions. However, carcinogenic risks are typically assessed over timescales of several decades, as the carcinogenic dose response is cumulative in nature. Construction of the proposed project would last for approximately two years, and daily emissions of diesel PM would fluctuate throughout the construction period. The size of the site indicates that only during a limited portion of construction activities would heavy-duty diesel-powered equipment be operating within 100 feet of sensitive receptors, and all construction equipment would be maintained in accordance with the CARB Portable Engine Air Toxics Control Measure and the Off-Road Diesel Regulation to control emissions to the maximum extent feasible. Therefore, construction of the proposed project would result in a less-than-significant impact related to pollutant concentrations at sensitive receptor locations.

Operations

Less-Than-Significant Impact. The proposed project would introduce a Creative Community Center and affordable housing units to the City and would be consistent with existing surrounding land use developments. Operation of the proposed project would not create a new substantial permanent source of air pollutant emissions to the project area. The proposed project does not involve large boilers, generators, or any other equipment or facilities that would warrant special permitting under SCAQMD regulations. The operational emissions analysis shown in **Table 7** demonstrates that operation of the proposed project would not produce emissions capable of resulting in substantial pollutant concentrations at sensitive receptor locations. Therefore, operation of the proposed project would result in a less-than-significant impact related to substantial pollutant concentrations at sensitive receptor locations.

d) Would the proposed project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Construction

Less-than-Significant Impact. The only source of potentially impactful construction emissions other than criteria pollutants, O_3 precursors, and TACs would be emissions leading to odors. Potential sources that may produce objectionable odors during construction activities include equipment exhaust, application of architectural coatings, and other interior and exterior finishes. Odors from these sources would be localized and generally confined to the immediate area surrounding the proposed project site, would be temporary in nature, and would not persist beyond the termination of construction activities. The proposed project would utilize typical construction techniques, and the odors would be typical of most construction sites and temporary in nature. In addition, as construction-related emissions dissipate away from the construction area, the odors associated with these emissions would also decrease and would be quickly diluted. Construction of the proposed project would comply with the provisions of SCAQMD Rule 401 and Rule 403 to prevent the occurrence of visible dust plumes. Therefore, construction of the proposed project would result in a less-than-significant impact related to emissions of odors and other potential nuisance conditions.

Operations

Less-Than-Significant Impact. The only source of potentially impactful emissions other than criteria pollutants, ozone precursors, and TACs would be emissions leading to odors. According to the SCAQMD *CEQA Air Quality Handbook*, land uses and industrial operations that are associated with odor complaints include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting, refineries, landfills, dairies and fiberglass molding. The proposed project would not include a land use typically associated with odor impacts. Operations would comply with City codes and regulations pertaining to waste collection and disposal. Operational impacts would be less than significant related to the emissions of odors and other potential nuisance conditions.

TECHNICAL APPENDIX

California Emission Estimator Model (CalEEMod) Output Files – Daily Emissions.

Wende Museum Creative Community Center

Los Angeles-South Coast County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Movie Theater (No Matinee)	84.00	Seat	0.04	1,920.00	0
Apartments Low Rise	6.00	Dwelling Unit	0.11	6,000.00	17
Library	5.56	1000sqft	0.05	5,560.00	0
Other Non-Asphalt Surfaces	0.06	Acre	0.06	2,613.60	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	11			**Operational Year**	2022
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	531.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Wende Museum Creative Community Center - Los Angeles-South Coast County, Winter

Project Characteristics - CO2 intensity factor based on 2019 Delivered Power Mix of 35% Renewables and 534 lbCO2e/MWh (SCE 2019 Sustainability Report)

Land Use - Creative Community Center comprises 7,480 total square feet.

Construction Phase - Project Schedule

Off-road Equipment - No grader - site constraint.

Off-road Equipment -

Off-road Equipment - Project Inventory

Off-road Equipment - Hardscape area is less than 3,000 square feet.

Off-road Equipment - Project Inventory

Grading -

Demolition - Remove 2,200 square feet of existing structures.

Trips and VMT - Up to 10 workers per day.

Architectural Coating - SCAQMD Rule 1113 Building Envelope Architectural Coatings

Vehicle Trips - Traffic Analysis: 7.32 = rez ITE resulting in approximately 44 daily trips
Museum expansion would generate up to approximately 31 daily trips

Fleet Mix - Residential Trips

Woodstoves - No fireplaces or woodstoves.

Area Coating - SCAQMD Rule 1113

Energy Use -

Construction Off-road Equipment Mitigation - SCAQMD Rule 403 Compliance

Area Mitigation -

1. Introduction

At the request of the City of Culver City, Architectural Resources Group (ARG) has prepared this Historic Resource Evaluation (HRE) for 10858 Culver Boulevard, in Culver City, CA. The subject property contains a two-story building with an attached one-story rear addition. Constructed as a single-family residence at 3829 Delmas Terrace ca. 1924, the building was moved to its current site in 1950 for use as Veterans of Foreign Wars Culver-Palms Post No. 1476. The VFW added the one-story gabled hall addition to the rear at that time. The scope of this HRE includes an evaluation of the property for eligibility against California Register of Historical Resources (California Register) and City of Culver City Cultural Resource criteria.

Upon thorough analysis of 10858 Culver Boulevard, ARG finds that it is eligible for listing as a City of Culver City Cultural Resource, at the Recognized level. This level of designation indicates the building is of architectural, historical, or cultural interest per the Culver City Municipal Code;[1] unlike the City's other two designation categories (Landmark and Significant), Recognized is an honorific designation and does not carry protections or requirements for regulation. The subject property does not appear to be eligible for listing in the California Register.

[1] Culver City Municipal Code, Section 15.05.010, Definitions.

2. Assessment Methodology

2.1 Research

For preparation of this report, ARG performed the following tasks for research, documentation, and analysis:

- Reviewed materials provided by the City of Culver City, including lease agreements, memoranda, correspondence, architectural plans, previous property documentation, and building permits.
- Conducted a search in California's Historic Resources Inventory (HRI) for previous surveys and evaluations of the subject property.
- Reviewed state and local technical bulletins, ordinances, and other materials related to the evaluation of historical resources.
- Conducted primary and secondary source research related to the history of the building.
- Evaluated the building against eligibility criteria of the California Register and the City of Culver City's Historic Preservation Ordinance.

ARG staff consulted the following archives and repositories as part of their research for this assessment: Los Angeles Public Library; digital newspaper archives including the ProQuest Historic Los Angeles Times, Newspapers.com, Newspaperarchive.com, and California Digital Newspaper Collection databases; United States Census Records; Culver City Directories; Sanborn Fire Insurance maps; historic aerial photographs through Historicaerials.com, and ARG's in-house library collection. A complete list of references is included in the bibliography.

2.2 Field Methods

In addition to primary and secondary source research, ARG conducted a site visit of the property on November 2, 2018. During the site visit, the property was photographed and notes were taken on its physical appearance and condition. B. Christine Byers, Cultural Affairs Coordinator for the City of Culver City, visited the site on August 12, 2019 to obtain additional photographs.

2.3 Project Team

This report was prepared by Mary Ringhoff, Associate, and Katie Horak, Principal, with research assistance by Lakan Cole, Architectural Historian, all of whom meet the *Secretary of the Interior's Professional Qualifications Standards* in Architectural History.

3. Previous Evaluations and Designations

The property at 10858 Culver Boulevard has been designated as a Culver City Cultural Resource at the "Recognized" level. This designation took place in 1991 and was based on a 1987 field survey by Thirtieth Street Architects, Inc.[2] As discussed in *Section 6: Regulatory Framework,* a Culver City Recognized Cultural Resource is "designated as being of architectural, historical, or cultural interest," but is of lower ranking than Cultural Resources designated as Significant or Landmark.[3]

The property has not been designated as a historic resource under state or federal registration programs.

4. Property History

4.1 Site and Setting

The subject property is an institutional building comprising a 1920s two-story, former single-family residence moved to the current site in 1950 and repurposed as a Veterans of Foreign Wars (VFW) Post with a large rear addition in the same year. The building sits on three flat lots on the south side of Culver Boulevard. The street grid in this area is oriented perpendicularly to Culver and Washington boulevards, which themselves were plotted in orientation to the former Pacific Electrical Railway line that ran along Culver. The building at 10858 Culver Boulevard is surrounded predominantly by residential subdivisions and institutional properties representing City-owned land in the subject property's block and at Veterans Memorial Park. The 10800 block of Culver Boulevard has had a municipal nature since its first development in the early post-World War II period, containing institutional occupants like a YMCA, Boy Scout building, VFW building, and a National Guard armory.

Location of 10858 Culver Boulevard (outlined in red). Base image: Google Maps.

The subject property is fronted by a wide surface parking lot and concrete sidewalk extending the entire length of this block and the one to the northeast (in front of Veterans Memorial Park). A wide landscaped median containing evergreen trees separates the parking lot and sidewalk from Culver Boulevard. The property is abutted by the Culver City Community Garden to the southwest and the parking lot for the Wende Museum of the Cold War (in the former armory) to the northeast. A public vehicular alley runs

northeast/southwest along the rear of the property. The building at 10858 Culver Boulevard sits on an open lot, separated from the properties on either side by chain link fencing. It is shallowly set back from the sidewalk and has open lawn/dirt areas in front with scalloped concrete edging. Astroturf covers the ground along the west side of the building, and a concrete walkway runs south from the sidewalk along the east side of the building. Foundation plantings of hedges and flowers are present. Chain link fencing has been used to create a small storage enclosure containing several small sheds at the rear of the building. Following the building's closing in November 2018, first-story windows and doors were boarded up, and opaque fencing was placed around the property.

4.2 Architectural Description

The building at 10858 Culver Boulevard comprises two distinct attached volumes, described in turn below as the "front volume," containing offices, and the "rear volume," containing a meeting hall/event space. The front volume is two stories in height, irregular in plan, and sits on a concrete foundation. It features wood frame construction, has a flat roof with flat parapet featuring metal coping, and is clad in smooth stucco. Its window types include single and grouped wood multi-light casements, single and paired wood multi-light double-hung, louver/jalousie, and other types as noted by façade below. The rear volume is one story, though its height rises above that of the front volume, and has a steeply pitched gabled roof clad in composition shingle. The volume has a rectangular plan, sits on a concrete foundation, and is clad in smooth stucco. Its windows are paired, multi-light wood hoppers. The rear volume does not have an independent entry, but is accessed via the front volume.

As noted above, first story doors and windows are currently boarded up, but remain intact behind the plywood.

To simplify the architectural description, the façade descriptions below use cardinal directions rather than the more accurate true directions; for example, the primary façade is noted here as the north façade rather than the northwest façade.

Front Volume

The primary (north) façade is asymmetrical and L-shaped, with the primary entrance located at the corner of the "L". The façade is dominated by a flat wood and stucco canopy that spans the length of the façade and partially wraps around the east and west corners. At the entry stoop, the canopy has vertical wood supports. The primary entry is a paneled, partially glazed, wood door with decorative hardware and wood grille. It is accessed by a concrete stoop with concrete steps and a metal pipe handrail. To the left of the entry is a tripartite metal window, composed of a fixed central window flanked by sliding sash. To the right of the entry is a tripartite window, with a fixed multi-light wood window flanked by jalousies. The second story of the primary façade contains single and grouped, multi-light wood casement windows. A temporary banner sign reading "AMERICAN VETERANS POST 2" is affixed to the façade, and a wood and metal address sign sits at one second-story window sill. Two round pipe vents are present below the parapet.

The east façade retains a "shadow" of where an exterior chimney has been removed, centered at the façade. Two first-story window openings have been infilled with painted plywood, and two double-hung, multi-light wood windows are present at the second story. At the southmost part of the front volume, a once-open small patio or recessed entry with wood shed roof has been enclosed with chain link fencing and plywood. A low wood ramp has been added in front of this area.

The west façade's first story contains a secondary entry near the south end (just north of the interface with the rear volume), comprising a single wood-paneled door and a concrete step. Windows at the west façade include single, single-light and multi-light, double-hung windows; paired louver/jalousies; and a single wood casement.

The south façade of the front volume does not appear to have any fenestration or features aside from round pipe vents under the parapet as seen on the north façade.

Rear Volume

The north, west, and south façades of the rear volume contain paired, multi-light wood hopper windows. Much of the south façade is obscured by sheds and stored items in an enclosed storage area. The east façade is partially obscured by fencing at the Wende Museum parking lot, and no fenestration or features are visible there.

4.3 Chronology of Development and Use

Following is a chronology of development and use of the property at 10858 Culver Boulevard. A more detailed owner and occupant history is included under *Section 5: Historical Background and Context*.

1899	Veterans of Foreign Wars (VFW) established.
1924 ca.	Two-story single-family residence constructed at 3829 Delmas Terrace for owner Esteban Higuera and his wife Evangeline.[4] Higuera's grandfather, Bernardo Higuera, was one of the original owners of Rancho Rincon de los Bueyes.
1928 ca.	Culver City Hospital (then called University Hospital) expands from its original location at 9543 Culver Boulevard (Hull Building) to a larger building at 3828 Hughes Avenue.
1930 ca.	VFW Post No. 1476 established for veterans associated with MGM Studios and originally met at the MGM lot; during the 1940s, its meetings were held at the American Legion building at 3824 Hughes Avenue.[5]
1944	American Veterans (AMVETS) established.
1950	Culver City Hospital expands to the east, removing houses fronting on Delmas Terrace in that block.[6] The City of Culver City acquires Lots 1-30 of Tract 9974, fronting on Culver Boulevard and paralleling the south side of the former Pacific Electric right-of-way "for public purposes."[7] Hospital owner A.E. Hoppe donates the house at 3829 Delmas Terrace to the VFW and relocates it to its current location on City property at 10858 Culver Boulevard.[8] Hoppe also donated and moved at least one other building, which would become the YMCA at 10888 Culver Boulevard.[9]
1950	VFW Post No. 1476 constructs large gable-roofed rear addition to building for meeting/social hall space. Contractor: Don Ely.[10] As part of the house-to-meeting hall conversion work, the architectural plans indicate the following exterior alterations were made to the front building:

[4] The building appears for the first time on the 1924 Sanborn fire insurance map; it is not present on the 1919 map. Owner/occupant information from U.S. Census, Culver City directories, and voter registration records accessible at ancestry.com; Higuera is listed at a Washington Street address in 1920 and at the Delmas Terrace address (originally 7038 Delmas Terrace) in 1924.

[5] Letter from American Legion Community Post #46 to the City of Culver City, September 29, 1975; letter from Culver City Barracks 2349 to the City of Culver City, September 24, 1975; Louis Dyer, "News of the Veterans' Posts," *Los Angeles Times*, January 12, 1941.

[6] Lease agreement between City of Culver City and VFW Post No. 1476, August 31, 1955.

[7] Letter from M. Tellefson to County Assessor, October 13, 1951.

[8] Ibid.; address of original property location discerned from building footprints on 1929 and 1950 Sanborn maps.

[9] "Shurtz to Speak at Culver-Palms YM Dedication," *Los Angeles Times* August 17, 1951.

[10] Architectural plans: "Addition and Alterations to Club House for Culver-Palms V.F.W. Post #1476," Don Ely, contractor, undated; Culver City Building Permit 9671, 5/26/50.

	• Addition of a new concrete stoop/steps, entry canopy with vertical supports and sign, and stone planters at the primary façade. • Replacement of first story windows on primary façade (new fixed windows in original openings). • Replacement of primary door. • Infill of two small second story windows on primary façade. • Addition of a new entry (door, stoop, and railing) at east façade. • Exterior chimney removed from east façade. • Replacement of door at west façade, with addition of hood and concrete stoop.
1950-1995	VFW Post No. 1476 occupied property under 20-year, $1 leases with the City. At least four other veterans' support organizations also used the property.[11]
1984	Building re-roofed.[12]
1995	VFW Post No. 1476 handed custodianship of the property over to AMVETS Post No. 2.[13]
1995-present	AMVETS Post No. 2 occupies property.[14] Space is also used by other veterans' organizations and community groups.
Pre-2006	Two window openings infilled with plywood at east façade, first story. Window opening added at west façade, second story. Three window openings infilled on rear addition (two on east façade and one on north façade).[15]
2018	First story windows and doors boarded up; temporary signage removed; opaque fencing installed around property.

In addition to the chronology outlined above, the following alterations were noted during the November 2, 2018 site visit. These alterations were undertaken at unknown dates:

- Tripartite window at primary façade replaced with metal window
- Chain link storage enclosure added at rear of rear volume
- Chain link and plywood enclosure fronted by wood ramp added at east façade of front volume

5. Historical Background and Context

5.1 Institutional Development in Culver City, 1917-1950

The area that would eventually become Culver City was originally occupied by the Tongva (Gabrielino) tribe, who established occupations throughout Ballona Valley and along the resource-rich Ballona Creek. This land later became part of two Ranchos: the 14,000-acre Rancho La Ballona (owned by José Manuel Machado and Felipe Talamantes), and the smaller Rincon de Los Bueyes (owned by Bernardo Higuera and Cornelio Lopez). In 1913, Nebraska native and real estate developer Harry H. Culver acquired land at the border of these two ranchos and announced the founding of Culver City. He sited the new community halfway between downtown Los Angeles and the growing resort community of Venice, conveniently right at the junction of three electric railway lines as well as the three major thoroughfares of Washington, Pico, and National boulevards. Culver City incorporated in 1917, with a size of about 770 acres, but a population of only about 500 residents (in 1920).[16]

Like many communities in Southern California, the city saw rapid growth during the 1920s following the end of World War I, the resurgence of the regional economy, and a large population influx. The City pursued a series of annexations, resulting in some of the oddly shaped boundaries seen today. The 1924 construction of the six-story Culver Hotel gave downtown a new anchor and heralded a new era for the community. Residential subdivisions appeared across the city, and commercial properties including restaurants, retail stores, and banks developed quickly to support the growing residential community. Among the more notorious commercial operations were the numerous speakeasies and clubs along Washington Boulevard. The Pacific Electric Railway's wide right-of-way through Culver City provided ample space for industrial occupants. Film studios were crucial to the community's early development, starting with the establishment of Thomas Ince's studio in 1918 and continuing with the later establishment of Metro-Goldwin-Mayer (MGM), Hal Roach Studio, RKO, Desilu Productions, and others.

Institutional properties like a city hall, a hospital, and fire and police departments were also established early on, and city organizers hastened to pave streets and number buildings. During the 1920s and 1930s, Culver City saw the addition of new institutions like religious congregations, schools, a library, community groups, fraternal organizations, the Culver City Woman's Club, a Chamber of Commerce, an airport, and ever-expanding municipal services. In 1925, Harry Culver established the Pacific Military Academy and moved it just north of the City in 1928; the military boarding school was a forerunner of other military-based institutions that would come to characterize parts of Culver City.[17] The City's growth slowed during the Great Depression (and no annexations were made during this time), but the local economy remained relatively stable.[18]

By 1940, Culver City had a population of almost 9,000, housed half of the country's movie productions, and had branded itself as "The Heart of Screenland."[19] Its film studios served a dual purpose during World War II, producing content for the U.S. Government as well as general audiences. The Hal Roach Studios actually leased its property to the Air Force to house the new First Motion Picture Unit, which produced training,

[16] Nathan Masters, KCET, "Culver City: From Barley Fields to the Heart of Screenland," accessed October 2018, https://www.kcet.org/shows/lost-la/culver-city-from-barley-fields-to-the-heart-of-screenland.
[17] City of Culver City, "Pacific Military Academy," accessed October 2018, https://www.culvercity.org/how-do-i/learn/about-culver-city/history-of-culver-city/harry-culver-the-founding-of-culver-city/pacific-military-academy.

[19] "From Barley Fields".

morale, and propaganda films and employed enlisted stars like Jimmy Stewart and Clark Gable.[20] Other wartime operations, like the Hughes Aircraft plant along Ballona Creek, expanded the economic base of Culver City and set the stage for postwar employment in the area.

Like the rest of Southern California, Culver City saw a massive population influx and expansion of development after World War II, as new residents coursed into the region. Residential subdivisions, new commercial and industrial properties, and institutional development all expanded during this time, and the City pursued numerous additional annexations. The City's status as a base for wartime activities from aeronautics to film production continued into the postwar period, resulting in an unusually large number of institutional properties with a military or Cold War association. Among the postwar institutional properties were a National Guard armory constructed on Culver Boulevard as a city-state partnership in 1950, and structures focused on veteran support and commemoration (discussed below).

Culver City Veterans' Support Organizations and VFW Post No. 1476

Following World War I and the return home of thousands of young veterans, veterans' support organizations and social groups rose in visibility in Culver City and across the country. Lacking their own meeting places, these groups usually met and held events at community halls or other large spaces like fraternal lodges. American Legion Post No. 46 commissioned local contractor Don Ely to construct its elaborate Spanish Colonial Revival-style headquarters at 3824 Hughes Avenue in 1930. Among the other local groups that met at the Legion building was Veterans of Foreign Wars Post No. 1476, originally established in the late 1920s/early 1930s at MGM Studios. This group incorporated the World War One Veterans of Culver City, Barracks 2349, and likely other sub-groups.[21] VFW Post No. 1476, which welcomed active members of the military as well as any veteran with an honorable discharge, helped veterans with benefits and social support and partnered with other local civic organizations to hold fundraisers, host recreational events, and perform community service.

After World War II, another massive wave of young veterans returned home, and many of them were drawn to the Los Angeles area by the robust job market, new residential subdivisions made accessible through VA loans, and favorable weather. Veterans' support organizations across the region saw huge increases in membership, and faced new challenges to their infrastructure and facilities. Often with the help of local municipalities, many of these groups were able to construct new post headquarters or repurpose existing buildings to help serve their members. Culver City used newly acquired land along the former Pacific Electric right-of-way to provide space for veterans, charging VFW Culver-Palms Post No. 1476 $1 a year to lease its moved and repurposed building at 10858 Culver Boulevard. The City also used its land to commemorate and honor veterans, designating Veterans' Memorial Park in 1949 and constructing the monumental Veterans Memorial Building in 1950.

VFW Post No. 1476 added a large meeting space to its new headquarters and occupied 10858 Culver Boulevard for 45 years. The Post allowed other civic and veterans groups to use its property for meetings and events; known groups included the VFW Post No. 1476 Ladies Auxiliary, the Culver City Barracks No. 2349 (WWI veterans and auxiliary), the Culver City Council #3542 Knights of Columbus, American Veterans

[20] The Wende Museum, "Cold War: Culver City: Hal Roach Studios and the First Motion Picture Unit (FMPU)," accessed October 2018, https://www.coldwarculvercity.org/hal-roach-studios.html.
[21] Letter from Culver City Barracks 2349 to City of Culver City, September 24, 1975.

of World War II, and Les Chevaliers de Colomb.[22] Starting in the early 1950s, the building also provided a music teaching and rehearsal space for high school band members, and housed a dance studio.[23]

Membership in veterans' support organizations declined somewhat as the veterans of World War I and then World War II and the Korean War aged. While veterans of later conflicts still needed support services, and many joined the VFW, the American Legion, AMVETS, and others, the federal Veterans' Administration continued to expand and provide more services. By 1995, VFW Post No. 1476 was in dire financial straits and requested that Culver City allow a change in custodianship for 10858 Culver Boulevard to AMVETS Post No. 2. As the Post noted in a letter to the City, the goal was to continue to keep the building available for a variety of veterans' groups: "…if AMVETS Post #26 [sic], who are in far better financial shape, can take over the custodianship and, therefore, the responsibility for the insurance payments, the various veterans organizations will still be able to use the hall, as before."[24]

In 1996, AMVETS Post No. 2 took over occupancy of 10858 Culver Boulevard and remained in the City-owned building, which became known as Valdez Hall (named after Pete Valdez, Sr.), until November 5, 2018.[25] AMVETS vacated the building at that time due to disrepair and structural deficiencies, and it remains vacant at this writing. In addition to its use as meeting space and AMVETS office, the building had housed a dance studio and was a center for the United States Veterans' Artists Alliance. VFW Post No. 1476 does not appear to be active at this time.

5.2 Veterans' Support Organization Buildings in the Greater Culver City Region

Facilities for supporting American military veterans in the Los Angeles region actually pre-date the founding of Culver City. In 1887, the governmental predecessor of the Veterans' Administration established the Pacific Branch of the National Home for Disabled Volunteer Soldiers, more commonly known as the Sawtelle Veterans Home or the Old Soldiers Home, in the Sawtelle neighborhood (west Los Angeles, near Santa Monica). This facility housed disabled veterans of the Civil War and other conflicts, and grew over the next decade to include more land, numerous buildings, a cemetery, and a new hospital. The campus continued to enlarge and upgrade its buildings throughout the 20th century, and now houses the VA West Los Angeles Medical Center.

Other veterans' support organizations flourished in the area during the 1920s, as thousands of veterans returned from World War I and found their needs only partially met by governmental institutions. The Veterans of Foreign Wars (established in 1899 after the Spanish-American War) and the American Legion (chartered by Congress in 1919) helped to meet these needs by providing everything from medical care to family support to social opportunities. These and other national veterans' support groups also emphasized community service, forming strong relationships within their local municipalities. Most of the local posts in Culver City and throughout the greater Los Angeles County region did not have their own purpose-built facilities, but instead held meetings and social events at fraternal lodges, community halls, and other public spaces.

[23] Petitions for Zone Exceptions, April 9, 1951 (music teaching) and September 3, 1952 (dance studio).
[24] Letter from VFW Post No. 1476 to City of Culver City, April 27, 1995.
[25] City of Culver City, "Get Involved: 10858 Culver Boulevard," accessed August 2019, https://www.culvercity.org/Home/Components/Topic/Topic/648/925?backlist=%2fhow-do-i%2fget-involved.

There were some exceptions. As noted above, American Legion Post No. 46 constructed its Spanish Colonial Revival-style headquarters in Culver City in 1930 and became the *de facto* meeting place for groups including VFW Post No. 1476. In Los Angeles, Patriotic Hall (renamed Bob Hope Patriotic Hall in 1959) housed multiple organizations in its 10-story headquarters downtown (1816 S. Figueroa Street, 1925, extant), and American Legion Post No. 43 constructed its monumental headquarters in Hollywood (2035 N. Highland Avenue, 1929, extant). American Legion Post No. 243 (Owensmouth) constructed a modest one-story building in Canoga Park (7326 N. Jordan Avenue, 1924, extant though altered). At least a few groups repurposed existing buildings, like the 1911 Pacific Telephone & Telegraph building in Highland Park that American Legion Post No. 206 converted in the 1930s (227 N. Avenue 55, extant).

Veterans' support organizations in Los Angeles County saw huge increases in membership after World War II, dovetailing with a population explosion across the region. With a booming economy and the help of local municipalities, many of the groups were able to establish their own individual headquarters for the first time. Some local posts constructed purpose-built headquarters, while others converted existing buildings. The postwar headquarters of these groups ranged in size, but shared several common qualities: they tended to be sited on commercial corridors and held both administrative space and larger event or social spaces (often incorporating bar and/or kitchen facilities). As seen at other properties on automobile-oriented commercial thoroughfares, the buildings often had large or eye-catching signage, usually wall-mounted, painted, or projecting blade types. The newly built properties tended to reflect the Mid-Century Modern architectural style, while the converted buildings exhibited a range of styles and types. Notable examples of extant, purpose-built, postwar facilities include American Legion Post No. 283 in Pacific Palisades (15247 La Cruz Drive) and American Legion Post No. 46 in Culver City (5309 Sepulveda Boulevard), where the post moved from its 1930 building on Hughes.

The pre-existing buildings that veterans' groups repurposed as headquarters during the postwar period utilized a range of building types, from the ca. 1924 single-family residence moved and repurposed as Culver-Palms VFW Post No. 1476, to the 1925 medieval-style silent movie studio converted into American Legion Post No. 817 in Mission Hills (13553 W. Reedley Street, altered but extant). Most commonly, new posts repurposed small-scale commercial buildings, like American Legion Posts 228 and 578 (5115 S. Central Avenue and 3668 W. Slauson Avenue) in South Los Angeles. American Legion Post No. 276 moved and repurposed a recreation hall from Effie Street to 2109 Merton Avenue (Eagle Rock) in 1953 and enlarged it by moving a second building to the property in 1956.[26] This property is extant, although it experienced extensive alterations in the early 2000s when it was converted into a charter school.

VFW posts exhibited the same repurposing patterns as American Legion buildings did, though at least in the greater Culver City region, they tended to convert smaller commercial buildings, which have experienced more alterations and demolition. Research found few recognizable examples of postwar VFW posts in repurposed buildings, and those that were found appear to have been repurposed more recently (within the last 25 years). At the present time, veterans' support organizations in the greater Culver City region are declining in membership, and fewer local posts are operating from stand-alone headquarters than was seen in the immediate postwar period.

5.3 Development of the Subject Property

Lots 11, 12, 13 of Tract 9974

Subdivided in 1927, Tract 9974 is a largely residential area bounded by Culver Boulevard and the Pacific Electric Railway right-of-way to the north, Elenda Street to the west, Coombs Avenue to the east, and lots on the south side of Braddock Drive to the south. Historic aerial photographs indicate that most of the tract was built out by the late 1940s, with the exception of Lots 1-30, which were empty in 1948. Together comprising one long east/west parcel at the north end of the tract, the lots were acquired by the City of Culver City sometime before 1950 "for public purposes."[27] In 1949 or 1950, the City began placing properties on this land, including the National Guard armory at 10808 Culver Boulevard, the VFW Post No. 1476 building at 10858 Culver Boulevard (on Lots 11-13), the Boy Scout Hut at 10866 Culver Boulevard (extant), and the YMCA at 10888 Culver Boulevard (no longer extant). All but the armory were buildings relocated from elsewhere; the VFW and YMCA buildings came from Delmas Terrace.[28] Immediately adjacent (east of), the City established Veterans Memorial Park from the formerly known Exposition Park area in 1950, and constructed the Veterans Memorial building. When the Pacific Electric Railway right-of-way was abandoned, Culver Boulevard was widened through the area north of Tract 9974.

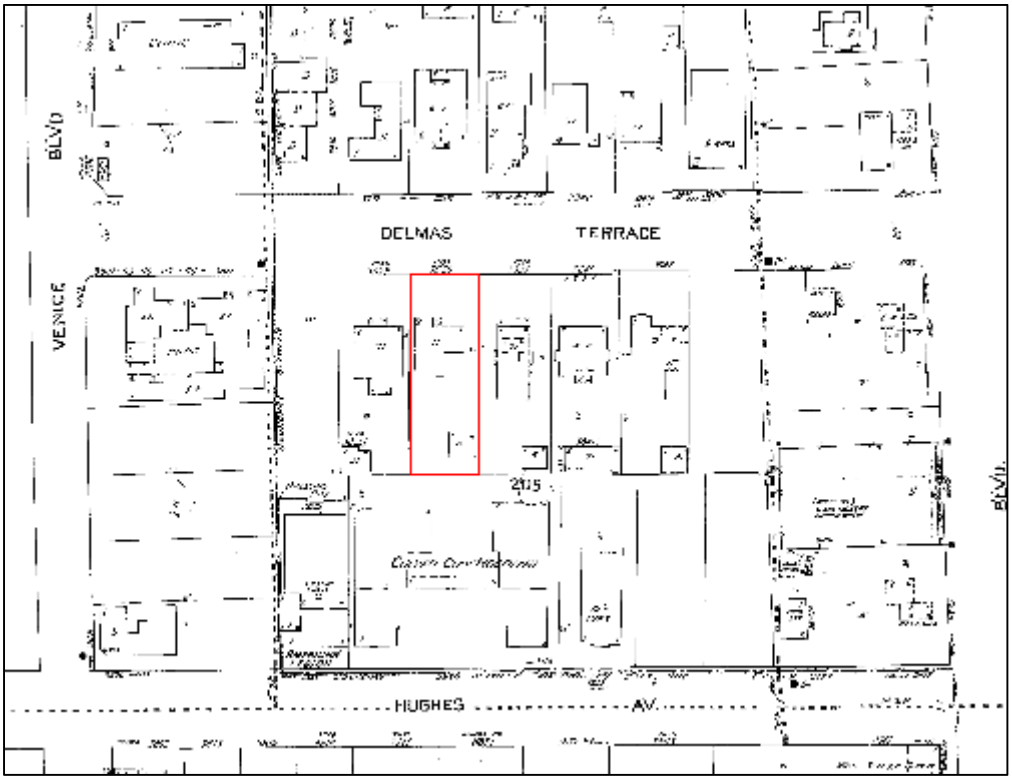

10858 Culver Boulevard (originally 3829 Delmas Terrace)

The two-story building at 10858 Culver Boulevard was originally constructed as a single-family residence at 3829 Delmas Terrace ca. 1924.[29] Its original owners and occupants were Esteban Higuera, his wife Evangeline, and their daughter Ynez.[30] Higuera appears to have been a grandson of Rincon de los Bueyes owner, Bernardo Higuera, and therefore represented a family who had lived in the area since long before Culver City was incorporated. In the 1910 and 1920 censuses, Higuera was found to be living on a farm on Washington Boulevard near Ince Boulevard. In 1910, he was enumerated as a grocery store owner, and in 1920 as a farmer, suggesting he had continued the family business of farming/ranching and also sold his products. At least two of his brothers (Bernardo and Claudino Higuera) lived on the same or an adjacent property, also working as farmers. The home on Delmas Terrace is likely to have been Esteban Higuera's residence during retirement, as he was 72 in the 1930 census, and by the 1940 census his wife Evangeline was a widow.

The 3000 block of Delmas Terrace sat immediately behind (east of) the Culver City Hospital property fronting on Hughes Avenue. Mrs. A.E. Hoppe acquired the hospital in 1941 and embarked on an expansion program in the early 1950s, with the first stage completed in 1955.[31] As noted in the *Los Angeles Times*, "The problem posed by inability to acquire land for expansion to either side of the original building was solved by expanding the building in depth, it was explained. The hospital now extends from Hughes Ave. to Delmas Terrace."[32] The expansion required the removal of at least three residential properties, at 3823, 2839, and 3835 Delmas Terrace. Hoppe donated at least one of the buildings to the VFW Post No. 1476 and

[32] "Work Furthered."

paid to have it relocated to the City-owned parcel at 10858 Culver Boulevard (Lots 11-13 of Tract 9974). As the building footprint of 3829 Delmas Terrace as depicted on the 1924, 1929, and 1950 Sanborn maps exactly matches that of the two-story building at 10858 Culver Boulevard, it is assumed to be the moved building.

3829 Delmas Terrace footprint on 1950 Sanborn map.

The VFW hired contractor Don Ely (builder of the 1930 American Legion building) to set the building on a new foundation and make a variety of alterations, including addition of a new concrete stoop/steps, entry canopy with vertical supports and sign, and stone planters at the primary façade; replacement of first story windows on primary façade (new fixed windows in original openings); replacement of primary door; infill of two small second-story windows on primary façade; addition of a new entry (door, stoop, and railing) at east façade; exterior chimney removed from east façade; and replacement of door at west façade, with addition of hood and concrete stoop. Ely also constructed a large gable-roofed volume attached perpendicularly to the rear of the building, to house meeting and event space. As discussed above, the VFW post retained occupancy of the building until 1995 and appears to have made only minor alterations. AMVETS Post No. 2 took over custodianship in 1996 and has occupied the building ever since.

No historic photographs of 3829 Delmas Terrace have been found, and it is unclear what architectural style it represented. Given its current massing and general appearance, it is possible that the house was designed in the Spanish Colonial Revival style and had characteristics, such as clay tile roof coping or other features, removed when it was moved. Many of the 1950 alterations, particularly the addition of a Mid-Century Modern-style entry canopy with vertical supports, the removal of an exterior side chimney, and the replacement of first-story windows and door at the primary façade, provided the 1920s building with a more modern 1950s appearance upon its relocation.

Alterations known to have taken place after 1950 include re-roofing in 1984; infill of several windows; a window replacement at the primary façade; and the addition of chain link enclosures at the east and south façades. VFW signage was also removed as part of the occupant change to AMVETS in 1995.

Contractor Don S. Ely

Born in Iowa in 1900, Don S. Ely moved to the Culver City area sometime before 1930 and worked as a building contractor. His first and best known project was the American Legion Post No. 46 building at 3824 Hughes Avenue, a Spanish Colonial Revival building completed in 1930. The building was constructed over the top of an existing municipal swimming pool. It is unknown whether Ely designed the building himself, used existing plans, or worked directly with an architect. The 1940 census indicates that Ely operated his own contracting business, with his wife Mildred P. Ely working as the bookkeeper.

Few references have been found to Ely's work, but those that have been found indicate he may have specialized in institutional buildings. Aside from the American Legion building, his known works include the second iteration of St. Augustine's Church (1936, now parish hall behind 1958 church), the rear addition to the VFW post at 10858 Culver Boulevard (1950), and St. Paul's Presbyterian Church (1949) at La Brea and Coliseum in Los Angeles.[33] Ely's design for St. Augustine had a "bird-cage-like steel-frame structure" that "caused a stir as it was woven into a single unit."[34]

6. Regulatory Framework

6.1 California Register of Historical Resources

The California Register of Historical Resources (California Register) is the authoritative guide to the state's significant historical and archeological resources. In 1992, the California legislature established the California Register "to be used by state and local agencies, private groups, and citizens to identify the state's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change."[35] The California Register program encourages public recognition and protection of resources of architectural, historical, archaeological and cultural significance; identifies historical resources for state and local planning purposes; determines eligibility for historic preservation grant funding; and affords certain protections under the California Environmental Quality Act (CEQA). All resources listed in or formally determined eligible for the National Register are automatically listed in the California Register. In addition, properties designated under municipal or county ordinances, or through local historic resources surveys, are eligible for listing in the California Register.

The structure of the California Register program is similar to that of the National Register, but places its emphasis on resources that have contributed specifically to the development of California. To be eligible for the California Register, a resource must first be deemed significant at the local, state, or national level under one of the following four criteria, which are modeled after the National Register criteria listed above:

1. It is associated with events or patterns of events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States; or

2. It is associated with the lives of persons important to local, California, or national history; or

3. It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master, or possesses high artistic values; or

4. It has yielded, or has the potential to yield, information important to the prehistory or history of the local area state or the nation.[36]

Like the National Register, the California Register also requires that resources retain sufficient integrity to be eligible for listing. A resource's integrity is assessed using the same seven aspects of integrity used for the National Register. However, since integrity thresholds associated with the California Register are generally less rigid than those associated with the National Register, it is possible that a resource may lack the integrity required for the National Register but still be eligible for listing in the California Register.

There is no prescribed age limit for listing in the California Register, although California Register guidelines state that "sufficient time must have passed to obtain a scholarly perspective on the events or individuals associated with the resource."[37]

---

[35] California Public Resource (CPR) Code, Section 5024.1 (a).

[36] California Public Resources Code SS5024.1, Title 14 CCR, Section 4852.

[37] California Office of Historic Preservation, *Technical Assistance Series #6: California Register and National Register: A Comparison* (Sacramento, CA: California Department of Parks and Recreation, 2001), 3. According to the *Instructions for Recording Historical Resources* (Office of Historic Preservation, March 1995), "Any physical evidence of human activities over 45 years old may be recorded for purposes of inclusion in the OHP's filing system. Documentation of

Resources may be nominated directly to the California Register. They are also automatically listed in the California Register if they are listed in or have been officially determined eligible for the National Register. State Historic Landmarks #770 and forward are also automatically listed in the California Register.[38]

6.2 City of Culver City Cultural Resources

The City of Culver City's criteria for designation of historical resources are generally based on those of the National Register. The process for consideration and the criteria are defined in the Municipal Code as follows:

A. *Threshold criteria.* To be considered for designation, the structure(s) must meet one of the following criteria:

   1. The structure(s) is at least fifty (50) years old and the exterior of the structure is accessible or visible to the public; or

   2. The structure or district has special importance to the City.

B. *Assessment criteria.* After satisfying the threshold criteria, a structure or district shall be reviewed for compliance with one or more of the following criteria, as defined under § 15.05.010 of this Chapter [see directly below]:

   1. Is the structure(s) of "architectural significance"?

   2. Is the structure(s) of "historical or cultural significance"?

   3. Do the structures in the district collectively meet 1. or 2. above? [39]

A property with "architectural significance" is defined as an "outstanding or surviving example of period, style, detail, unique craftsmanship or method of construction; or [one that] represents the work of a locally, statewide or nationally significant architect, designer, or builder."

A property with "historical or cultural significance" is defined as "a structure or district in which events occurred that made a significant contribution to City, State or national history or culture; or that involved a close association with the lives of people who made a significant contribution to the history and development of the City, State or nation."[40]

These definitions essentially mirror those of the National Register and the California Register. Three tiers of designation are offered:

Landmark structure: A structure designated as an exceptional example of the highest architectural, historical, or cultural significance to the community.

---

resources less than 45 years old may also be filed if those resources have been formally evaluated, regardless of the outcome of the evaluation." This 45-year threshold is intended to guide the recordation of potential historical resources for local planning purposes, and is not directly related to an age threshold for eligibility against California Register criteria.

[38] California Department of Parks and Recreation, Office of Historic Preservation, *Technical Assistance Series #5: California Register of Historical Resources, The Listing Process* (Sacramento, CA: California Department of Parks and Recreation, n.d.), 1.

[39] Culver City Municipal Code, Section 15.05.020, Cultural Resource Criteria.

[40] Culver City Municipal Code, Section 15.05.010, Definitions.

Significant structure: A structure designated as being of substantial architectural, historical, or cultural significance to the community.

Recognized structure: A structure designated as being of architectural, historical, or cultural interest. [41] Unlike the Landmark and Significant categories, Recognized is an honorific designation only and does not carry protections or requirements for regulation.

In 1991, City Council Resolution No. 91-R015 instituted a point system to evaluate properties that meet the threshold criteria to determine where they would fall within these three categories.[42] This system is applied to the subject property in the *Evaluation of Significance* section below.

[41] Culver City Municipal Code, Section 15.05.010, Definitions.
[42] Resolution of the Culver City Council (91-R015 and Exhibit A), adopted February 11, 1991.

7. Evaluation of Eligibility

7.1 Evaluation of Significance

The property at 10858 Culver Boulevard appears to be individually eligible for listing as a Culver City Cultural Resource at the "Recognized" level. It does not appear to be eligible for listing in the California Register.

Following is an evaluation of 10858 Culver Boulevard against state and local eligibility criteria as well as an assessment of its historic integrity.

California Register

California Register Criterion 1: associated with events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States.

The subject property is associated with the growth and expansion of veterans' support organizations in California during the post-World War II period, when many veterans' groups established their own facilities for the first time. VFW Post No. 1476 gained its first independent headquarters in 1950, when a building was moved to 10858 Culver Boulevard and received a rear addition to serve the needs of the group. While the building is a representative example of postwar veterans' support organization headquarters, which ranged from converted existing properties to purpose-built new facilities, it is one of thousands throughout the state. Dozens of postwar veterans' properties exist in Los Angeles County alone, and in comparison with these properties, 10858 Culver Boulevard does not appear to have been unusual or noteworthy in terms of its establishment, alterations, occupant, or use. The property is not a significant embodiment of patterns of local or regional history, or the cultural heritage of California or the United States, and does not appear eligible under California Register Criterion 1.

California Register Criterion 2: associated with the lives of persons important to local, California, or national history.

The front volume of the subject property was originally a single-family residence at 3829 Delmas Terrace, and was owned and occupied by Esteban and Evangeline Higuera. The Higuera family has deep roots in the Culver City area: Esteban's grandfather Bernardo Higuera was one of the owners of Rincon de los Bueyes, and his children and grandchildren carried on his farming/ranching legacy on their ancestral land as Culver City grew up around them. Esteban Higuera lived and worked on his Washington Boulevard farm until at least 1920; sometime around 1924, he moved into his new house on Delmas Terrace and lived there during his retirement. Higuera died sometime between 1930 and 1940. While Higuera's 1920s residence represented ties to one of Culver City's founding families, Esteban Higuera himself does not appear to have been individually highly important to local history. Even if Higuera was found to have been a locally significant individual, the historical association between Higuera and his Delmas Terrace house was not strong or direct while the building was at its original location; it was Higuera's residence during his retirement, not during the majority of his lifetime when he lived and worked on the family farm. The already tenuous association with the Higuera family was broken when the building was moved to Culver Boulevard and altered and repurposed into a VFW Post. Research did not find that the property was directly associated with any individuals significant in the history of the VFW, in the history of Culver City as

a community, or in the history of California. For these reasons, the property does not appear to meet California Register Criterion 2.

California Register Criterion 3: embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master, or possesses high artistic values.

The subject property was much altered during its 1950 move and repurposing as a VFW building, involving the addition of a rear volume to the 1920s single-family residence and the addition of features like a wide canopy with vertical supports to reflect 1950s architectural trends. The property largely retains its integrity dating to its postwar period of significance, having experienced only minor post-1950 alterations, including one window replacement, several infilled windows on secondary façades, and addition of reversible features like chain link storage enclosures. However, the property was not a purpose-built veterans' support organization building, its rear volume is utilitarian in terms of style and articulation, and it represents a hodgepodge of periods and property types. It does not embody the distinctive characteristics of a type, period, region, or method of construction. The property's architect is not known (either the original building or the 1950 addition); however, given its modest size and appearance, it is highly unlikely that it represents the work of a master. Due to its *ad hoc* layout and appearance that maximized its 1950s function, it does not possess high artistic values. The property does not appear eligible under California Register Criterion 3.

California Register Criterion 4: has yielded or has the potential to yield information important to the prehistory or history of the local area, state, or the nation.

The building itself represents a 1920s single-family residence relocated in 1950 and repurposed with a large rear addition as an institutional property in that year. Its construction materials and methods appear to have been typical of its time periods, and the building is unlikely to yield information important to the prehistory or history of the local area, state, or the nation.

In terms of the land on which the building currently sits (10858 Culver Boulevard, historically Lots 11-13 of the 1927 Tract 9974), its potential to contain intact subsurface cultural resources, and therefore to yield information important in prehistory or history, is currently unknown; an archaeological assessment including a records search or any other investigation (e.g. subsurface testing) was not included in the scope of this report.

Culver City Cultural Resource

10858 Culver Boulevard meets the criteria for listing as a Culver City Cultural Resource on the "Recognized Structure" level, as outlined below.

Threshold Criteria:

The property meets the first "threshold criteri(on)" requiring that a property be at least fifty years old and accessible to or visible to the public. The second threshold criterion requires that the property have "special importance to the City."[43] A property must only meet one of these two criteria. The threshold criteria are in place to determine whether a property should proceed with an evaluation against the

[43] Culver City Municipal Code, Section 15.05.020, Cultural Resource Criteria.

remaining criteria. Once this threshold is met, a property must be measured against the definitions of significance included in the assessment criteria.

Assessment Criteria:

The assessment criteria (noted in *Section 6: Regulatory Framework*, above) are applied using the City's point system as follows:

1) Quality of Architecture

    a. Does the structure represent the work of a city/state/nationally significant architect/designer/builder? (8 points)
    [0]

    CHOOSE ONE OF THE FOLLOWING:

    b. Is the structure in question the best example of its kind in Culver City? (20 points)

    [0]

    c. Is the structure a good example but there are better? (10 points)

    [0]

    d. Does the structure retain some of the original construction/style/materials but there have been significant alterations? (5 points)

    [5]

    Subtotal, Architectural Significance: 5

2) Historical/Cultural Significance

    a. Is the structure associated with a prominent person(s) of importance to the incorporation, growth, or development of Culver City (State or Nation)? (15 points)
    [0]

    b. Is the structure associated with an historical pattern or significant event related to incorporation, growth or development of Culver City (State or Nation)? (10 points)

    [10]

    Subtotal, Historical/Cultural Significance: 10

3) Other

    a. Is the structure the oldest example of its type/style in Culver City? (5 points)

    [0]

    b. Is the structure accessible and/or visible to the public? (5 points)
    [5]

c. Has the structure been well preserved? (5 points)

[0]

Subtotal, Other:	5
TOTAL POINTS:	20

The property at 10858 Culver Boulevard meets the City's threshold criteria and assessment criteria: it is more than 50 years old, is visible to the public, and has special importance to the city. This indicates its eligibility for designation as a cultural resource. The total score of 20 indicates that the building is eligible for designation as a "Recognized Structure," a category for properties within the range of 5-20 points. A recognized structure is "designated as being of architectural, historical, or cultural interest," but is of lower ranking than Cultural Resources designated as Significant or Landmark.[44] This designation is honorific only, and carries no protections or requirements for regulation.

The property is not eligible under Item 1a. above, "Does the structure represent the work of a city/state/nationally significant architect/designer/builder?" As discussed in the evaluation under California Register Criterion 3 above, the building's architect is not known, and its architectural or artistic qualities are not such that it is a notable example of any particular style or building type.

The property is not eligible under Item 1b., "Is the structure in question the best example of its kind in Culver City?" The best example of a purpose-built veterans' building in the City is the 1930 American Legion building at 3824 Hughes Avenue.

The property is not eligible under Item 1c., "Is the structure a good example but there are better?" As the building was moved and added to instead of being purpose-built, it represents a mixture of property types, construction/alteration dates, and architectural styles. It is not a good example of the property type or of any particular architectural idiom.

The property is eligible under Item 1d., "Does the structure retain some of the original construction/style/materials but there have been significant alterations?" It retains much of its original construction and materials and continues to convey its utilitarian nature, but has experienced multiple alterations both before and after its moving and repurposing. Under Culver City's point system, it earns 5 points under Quality of Architecture.

The property is not eligible under Item 2a., "Is the building associated with a prominent person(s) of importance to the incorporation, growth, or development of Culver City (State or Nation)?" As discussed in the evaluation under California Register Criterion 2 above, 10858 Culver Boulevard does not have a strong or direct association with a historically significant individual.

The property is eligible under Item 2b., "Is the structure associated with an historical pattern or significant event related to incorporation, growth or development of Culver City (State or Nation)?" As discussed in the evaluation under California Register Criterion 1 above, 10858 Culver Boulevard is associated with the growth and expansion of veterans' support organizations in California during the post-World War II period, when many veterans' groups established their own facilities for the first time. While the building does not rise to the state level of significance due to the number of similar properties statewide, it does appear to be of interest on the local level. VFW Post No. 1476 was founded in 1930, but did not gain its first independent headquarters until 1950; in this year, a house was moved to city-owned property at 10858 Culver Boulevard and given a rear addition to serve the needs of the group. The Culver-Palms post

[44] Culver City Municipal Code, Section 15.05.010, Definitions.

occupied the building, within what was a municipal district stretching along Culver Boulevard and including a National Guard armory, a Boy Scout facility, the Veterans' Memorial Building, and Veterans' Memorial Park as well as the VFW post. 10858 Culver Boulevard served as the headquarters for the VFW and other veterans' groups until it was transferred to AMVETS in 1995, where it has continued to serve as a veteran-focused facility. The property has experienced minor alterations since its 1950 conversion, but continues to convey its historical character. As a result, 10858 Culver Boulevard embodies significant patterns of historical development, including municipal and veterans' support organization development, during the postwar period. Under Culver City's point system, it earns 10 points under Historic/Cultural Significance.

The property does not meet Item 3a., "Is the structure the oldest example of its type/style in Culver City?" It is neither the oldest example of a single-family residence or of an institutional building in Culver City, nor is it the oldest example of a veterans' support organization facility in the city.

The property meets Item 3b., "Is the structure accessible and/or visible to the public?" It is visible to the public and is technically accessible to same, though the property owner currently restricts public access (i.e. it is not a public facility like a municipal park). Under Culver City's point system, it earns 5 points under Other for this Item.

The property does not meet Item 3c., "Has the structure been well preserved?" Although it retains sufficient exterior integrity to convey its historical character and interest, the property has fallen into disrepair and suffers from "structural and non-structural deficiencies that seriously impact fire and earthquake safety."[45]

7.2 Period of Significance

The period of significance for 10858 Culver Boulevard is defined here as 1950-1995, reflecting the dates during which it was occupied by VFW Post No. 1476. This period captures the time during which the building was moved and converted from a single-family residence to an institutional facility, and also captures the growth of Culver City institutions and veterans' support organizations after World War II.

7.3 Evaluation of Integrity

The following is an evaluation of the property's integrity using the seven aspects of integrity as defined by the National Park Service. These integrity elements are used in evaluating the eligibility of properties for listing in the National Register of Historic Places, and are broadly applicable in evaluating the integrity of properties in evaluations under California Register and local criteria. Integrity is evaluated by weighing all seven of these aspects together and is ultimately a "yes or no" determination – that is, a resource either retains sufficient integrity or it does not.[46] Some aspects of integrity may be weighed more heavily than others depending on the type of resource being evaluated and the reason(s) for its significance. Since integrity depends on a resource's placement within a historic context, integrity can be assessed only after it has been established that the resource is significant, and under which criteria.

Location (the place where the historic property was constructed or the place where the historic event occurred)

[45] City of Culver City, "Get Involved: 10858 Culver Boulevard," accessed August 2019, https://www.culvercity.org/Home/Components/Topic/Topic/648/925?backlist=%2fhow-do-i%2fget-involved.
[46] Derived from NRB 15, Section VIII: "How to Evaluate the Integrity of a Property."

While the front volume of 10858 Culver Boulevard was moved to the current site from its original location on Delmas Terrace, it has remained at its current location since that move in 1950. As the property's significance derives from its association with the local VFW post and larger patterns of institutional development in Culver City during the post-World War II period, rather than from its 1920s construction period or original owner-occupant, it retains this aspect of integrity.

Design (the combination of elements that create the form, plan, space, structure, and style of a property)

The building's overall form, plan, space, structure, and style have remained the same since its conversion from a single-family residence to a VFW post in 1950. Minor alterations over the years, most notably the infill of several windows at secondary façades, have had minimal change to the building's design. It retains this aspect of integrity.

Setting (the physical environment of a historic property)

The property's setting continues to be a large, partially open parcel with multiple institutional occupants along Culver Boulevard. Changes to the setting have included the addition of fencing to the properties on either side (The Wende Museum in the former armory and the community garden), but the fencing is not opaque and the feeling of continuity and openness remains. Thus, 10858 Culver Boulevard retains integrity of setting.

Materials (the physical elements that were combined or deposited during a particular period of time and in a particular manner or configuration to form a historic property)

The subject property has lost some materials dating to the 1950s and earlier, due to a window replacement at the primary façade and the infill of several window openings on secondary façades. These alterations have slightly compromised integrity of materials, but the majority of historic materials dating to the 1950 conversion for which the building is significant remain. These include wood windows, wood and stucco entry canopy, primary door, and stucco cladding. As a result, the building retains this element of integrity.

Workmanship (the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory)

Original workmanship related to the building's first incarnation as a single-family residence has been impacted by the 1950 conversion to an institutional property, but the property's significance derives from its post-conversion historical associations. Workmanship dating to the 1950 work is minimal and utilitarian, but intact features like the wood and stucco entry canopy (particularly the wood supports) and the functional wood hopper windows of the rear volume demonstrate that the building's mid-century workmanship. The property retains this aspect of integrity.

Feeling (a property's expression of the aesthetic or historic sense of a particular period of time)

While its entry canopy is distinctly mid-century in feeling, the property is not easily recognizable as either a 1920s or a 1950s property due to its mix of construction periods and differentiated massing. Contemporary signage that would have clearly identified its 1950s occupation, as was specified in the 1950 conversion plan, is not present. The property does not clearly express the aesthetic or historic sense of a particular period of time (or multiple periods of time), and thus does not retain integrity of feeling.

Association (the direct link between an important historic event/person and a historic property)

Because 10858 Culver Boulevard retains its historic character within the largely intact setting of municipal properties on a large parcel, it maintains its association with postwar institutional development in Culver City and with the growth of veterans' support organizations during this time period. It is well known locally as a veterans' facility, having served that purpose continuously since 1950. The property retains integrity of association.

In summary, 10858 Culver Boulevard retains integrity of location, design, setting, materials, workmanship, and association. Though its integrity of feeling has been lost, the building still retains most aspects of integrity, and readily conveys its historic significance as a postwar veterans' support organization facility in Culver City.

7.4 Character-Defining Features

The following is a list of character-defining features of 10858 Culver Boulevard as related to its significance as a postwar veterans' support organization facility.

- Location on south side of Culver Boulevard, within setting containing other municipal properties
- Asymmetrical massing due to two differentiated volumes
- Two-story height, L-shaped footprint, and flat roof with parapet at front volume
- Smooth stucco cladding
- Wood and stucco entry canopy at primary façade
- Wood double-hung, casement, and hopper windows

7.5 Conclusion

Upon documentary research, site analysis, the development of historical background, and an evaluation against state and local eligibility criteria, ARG finds that 10858 Culver Boulevard is individually eligible for listing as a City of Culver City Recognized Structure; this is in concordance with its current designation status.

Memorandum

To: Michael Allen, Planning Manager
City of Culver City, Current Planning Division
9770 Culver Boulevard
Culver City, CA 90232

Project: 10858 Culver Boulevard Cultural and Paleontological Resources Records Search
ARG Project No.: 201014
Date: December 2, 2020

Dear Mr. Allen,

On behalf of Glaser Weil, Architectural Resources Group (ARG) has completed cultural and paleontological resources records searches through the South Central Coastal Information Center (SCCIC), the Native American Heritage Commission (NAHC), and the Natural History Museum of Los Angeles County (NHMLA) for the property at 10858 Culver Boulevard, Culver City, CA. The subject property currently contains a vacant City-owned building. The results of the three records searches are summarized below, with original materials attached as appendices.

SCCIC

ARG requested spreadsheets, shapefiles, and reports for all known historic and prehistoric resources and previous studies on and within a ¼-mile radius of the property at 10858 Culver Boulevard. While such records searches typically look for resources within a ½-mile or 1-mile radius of the property, due to current COVID-19 protocols the SCCIC is only performing ¼-mile radius searches.

A total of three previous studies have been conducted within a ¼-mile radius of the subject property; none included the property itself.

The search did not identify any known prehistoric or historic archaeological resources on the subject property, nor did it identify any known prehistoric or historic archaeological resources within a ¼-mile radius.

The search did not identify any known historic architectural resources on the subject property. It identified one eligible historic architectural resource within ¼-mile radius of the property:

Sony/MGM/Lorimar/Columbia Studios, a district with multiple buildings identified as eligible in Culver City's 1990 historic resources survey. The southern corner of the studio property extends slightly into the ¼-mile radius but does not appear to include any of the resources previously identified as eligible.

Appendix A includes the results letter from the SCCIC and a map depicting the location of the historic architectural resource in relation to the subject property.

NAHC

ARG requested a search of the Sacred Lands files and the local government tribal consultation list for the property at 10858 Culver Boulevard.

The Sacred Lands File search did not identify any known cultural resources within the subject property.

The NAHC provided a list of Native American tribal contacts who may have knowledge of cultural resources in the project area.

Appendix B includes the results letter from the NAHC and the list of contacts for tribal consultation.

NHMLA

ARG requested a search of the paleontology collection records for the property at 10858 Culver Boulevard.

The paleontological records search did not identify any known fossil localities directly within the proposed project area. However, it did find that six known localities exist, either at the surface or at depth, within an approximately 3-mile radius of the subject property, from the same sedimentary deposits that occur in the area of 10858 Culver Boulevard.

As potentially fossil-bearing units are present in the proposed project area, NHMLA recommends a full paleontological assessment be conducted by a paleontologist meeting Bureau of Land Management or Society of Vertebrate Paleontology standards.

Appendix C includes the results letter from the NHMLA.

Should you have any questions regarding the information provided herein, please do not hesitate to contact me at the phone number or email address below.

Sincerely,

Mary Ringhoff
Senior Associate, ARG

Re: Records Search Results for the 10858 Culver Blvd. Project

The South Central Coastal Information Center received your records search request for the project area(s) referenced above, located on the Beverly Hills, CA USGS 7.5' quadrangle(s). Due to the COVID-19 emergency, we have temporarily implemented new records search protocols. With the exception of some reports that have not yet been scanned, we are operationally digital for Los Angeles, Orange, and Ventura Counties. At your request, we have provided bulk digital data for you to summarize for each of your projects. **(Remove if not a bulk project)** See attached document for your reference on what data is available in this format. The following reflects the results of the records search for the project area and a ¼-mile radius:

As indicated on the data request form, the locations of reports was not wanted. The location of resources are provided in the following format: ☐ custom GIS maps ☒ shape files ☐ hand drawn maps

Resources within project area: 0	None
Resources within ¼-mile radius: 1	SEE ATTACHED SHAPEFILE
Reports within project area: 0	None
Reports within ¼-mile radius: 3	SEE ATTACHED LIST

Resource Database Printout (list):	☐ enclosed	☒ not requested	☐ nothing listed
Resource Database Printout (details):	☐ enclosed	☒ not requested	☐ nothing listed
Resource Digital Database (spreadsheet):	☐ enclosed	☐ not requested	☒ nothing listed
Report Database Printout (list):	☐ enclosed	☒ not requested	☐ nothing listed
Report Database Printout (details):	☐ enclosed	☒ not requested	☐ nothing listed
Report Digital Database (spreadsheet):	☒ enclosed	☐ not requested	☐ nothing listed

GLO and/or Rancho Plat Maps: ☒ not available at SCCIC

Caltrans Bridge Survey: ☒ not available at SCCIC; please go to http://www.dot.ca.gov/hq/structur/strmaint/historic.htm

Shipwreck Inventory: ☒ not available at SCCIC; please go to http://shipwrecks.slc.ca.gov/ShipwrecksDatabase/Shipwrecks_Database.asp

Soil Survey Maps: (see below) ☒ not available at SCCIC; please go to http://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.aspx

Please forward a copy of any resulting reports from this project to the office as soon as possible. Due to the sensitive nature of archaeological site location data, we ask that you do not include resource location maps and resource location descriptions in your report if the report is for public distribution. If you have any questions regarding the results presented herein, please contact the office at the phone number listed above.

The provision of CHRIS Data via this records search response does not in any way constitute public disclosure of records otherwise exempt from disclosure under the California Public Records Act or any other law, including, but not limited to, records related to archeological site information maintained by or on behalf of, or in the possession of, the State of California, Department of Parks and Recreation, State Historic Preservation Officer, Office of Historic Preservation, or the State Historical Resources Commission.

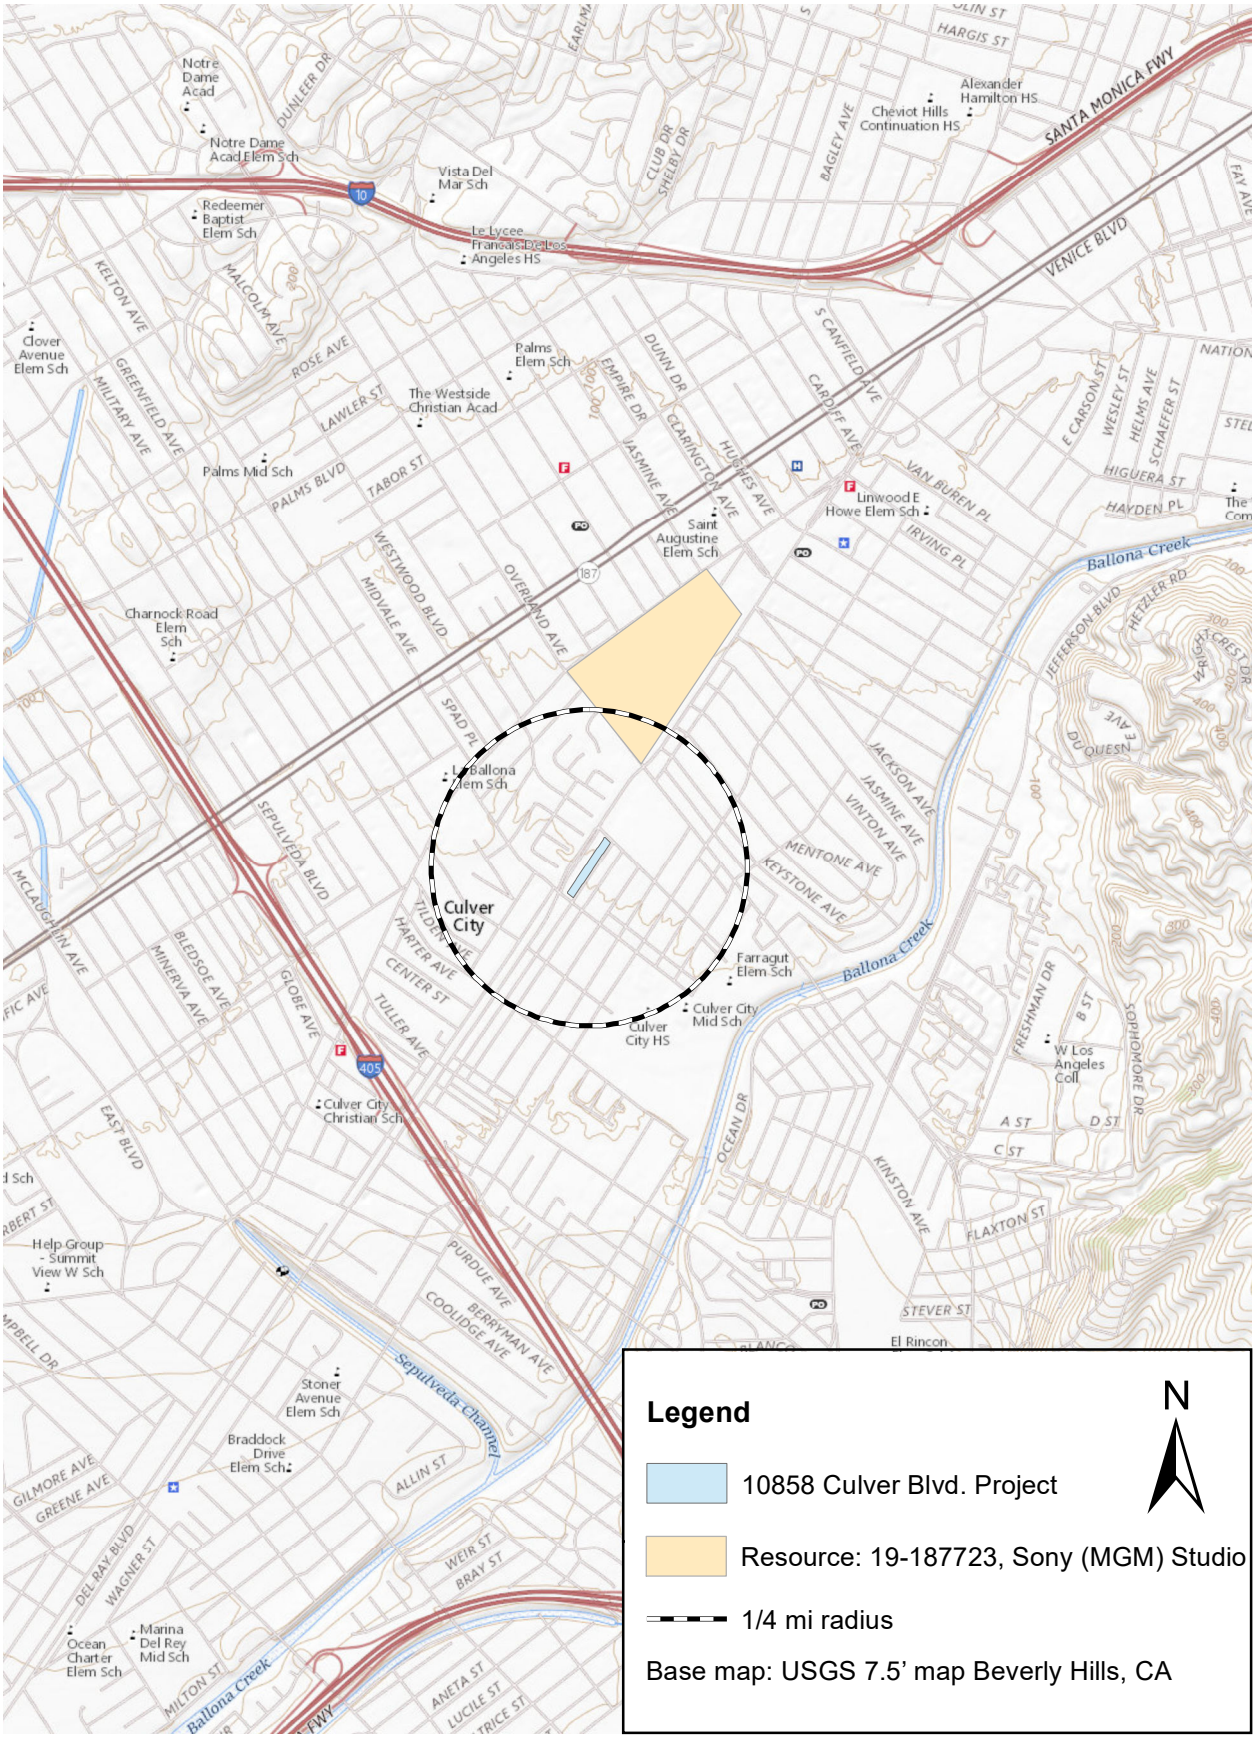

Due to processing delays and other factors, not all of the historical resource reports and resource records that have been submitted to the Office of Historic Preservation are available via this records search. Additional information may be available through the federal, state, and local agencies that produced or paid for historical resource management work in the search area. Additionally, Native American tribes have historical resource information not in the CHRIS Inventory, and you should contact the California Native American Heritage Commission for information on local/regional tribal contacts.

Should you require any additional information for the above referenced project, reference the record search number listed above when making inquiries. Requests made after initial invoicing will result in the preparation of a separate invoice.

Thank you for using the California Historical Resources Information System,

Michelle Galaz

Re: 10858 Culver Boulevard Project, Los Angeles County

Dear Ms. Ringhoff:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: steven.quinn@nahc.ca.gov.

Sincerely,

Steven Quinn
Cultural Resources Analyst

Attn: Mary Ringhoff

re: Paleontological resources for the 10858 Culver Blvd. Project

Dear Mary:

I have conducted a thorough search of our paleontology collection records for the locality and specimen data for proposed development at the 10858 Culver Blvd. project area as outlined on the portion of the Beverly Hills USGS topographic quadrangle map that you sent to me via e-mail on October 28, 2020. We do not have any fossil localities that lie directly within the proposed project area, but we do have fossil localities nearby from the same sedimentary deposits that occur in the proposed project area, either at the surface or at depth.

The following table shows the closest known localities in the collection of the Natural History Museum of Los Angeles County.

Locality Number	Location	Formation	Taxa	Depth
LACM IP 4982	Intersection of Sepulveda Blvd. and Venice Blvd	Palos Verdes Sand	Gastropods (*Turbonilla halia*)	Unkown
LACM IP 4705	South of Culver City near Smith Ranch	Undetermined (Pleistocene; mudstone; sandy shale & unconsolidated sand)	Invertebrates	Unkown; found in Union Rock Products Co. sand pit
LACM VP 3368	Near where the Southern Pacific RxR crosses Jefferson Blvd.	Undetermined (Pleistocene)	Horse (*Equus*)	Unknown
LACM VP 4232	near intersection of Obama Blvd and S La Cienega Blvd	Undetermined (Pleistocene, interbedded sands & clayey silts)	Human (*Homo*); Mammoth (*Mammuthus*)	12-13 ft bgs
LACM VP 4250	250 yards south of Adams & Washington	Undetermined (Pleistocene)	Elephant (*Elephas*)	Unknown

	Streets			
LACM IP 42400, 42404-42405, 4205, 42395-42398,	Office park just south of Holy Cross Cemetery, bounded by Hwy 90, Hannum Ave, Bristol Pkwy, and W Slauson Ave	Pleistocene terrace deposits	numerous invertebrates as shell beds	50 cm bgs

VP, Vertebrate Paleontology; IP, Invertebrate Paleontology; bgs, below ground surface

This records search covers only the records of the Natural History Museum of Los Angeles County ("NHMLA"). It is not intended as a paleontological assessment of the project area for the purposes of CEQA or NEPA. Potentially fossil-bearing units are present in the project area, either at the surface or in the subsurface. As such, NHMLA recommends that a full paleontological assessment of the project area be conducted by a paleontologist meeting Bureau of Land Management or Society of Vertebrate Paleontology standards.

Sincerely,

Alyssa Bell, Ph.D.
Natural History Museum of Los Angeles County
