Project: Tree Well Grate Modifications

Based on the site visit, we would propose performing modifications to Tree Well Grates throughout the City of Culver City to relieve pressure on existing tree bases. Our approach would include the following:

- All Labor and Equipment Needed
- Prevailing Wages
- Tree Base protection (wrap base during modification of grate)
- Trimming of existing grate to relieve pressure
- Grinding of sharp edges
- Traffic Control per "WATCH MANUAL"
- Fire Watch during modifications
- Saw cutting of existing concrete
- Placement of DG as directed
- City to provide all required permits

Our Proposal would exclude the following:

- Traffic Plans
- Fabrication of new grates
- Planting of new trees
- Night Work
- DG

Labor:

General Labor Foreman: \$79 per hour

Laborer: \$69 per hour

Flatbed: \$50 per hour

Dump Truck: \$35 per hour

Walk Behind Concrete Cutter: \$25 per hour

Equipment:

Utility Flatbed Outfitted with Cones and Signs, Air Compressor, Cutting tools, Water tank and Safety Equipment Required

We would propose the use of a two man crew and would estimate production at 1.5 completed per hour during an eight hour day

Sincerely,
Ricardo Ayala
